[[EXAMNT6.09W : 3929 in EXAMNT6.09W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0200.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-594-0200 x0282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
203-594-0200 x0219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.

4601. IPS Daily Report - 09 June 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-09 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <3rakp3$s7r@flare.syd.ips.oz.au>
Source record: 244808
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 09/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 09 JUNE AND FORECAST FOR 10 JUNE - 12 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 86/29

GOES satellite data for 08 Jun
Daily Proton Fluence >1 MeV: 5.6E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 2.9E+08 (moderate)
X-ray background: A5.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
10 Jun 11 Jun 12 Jun
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 10 Jun: 88/32

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 08 Jun
Learmonth 4 1112 1221
Fredericksburg 5 3
Planetary 8 6

Observed Kp for 08 Jun: 2211 1232
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
10 Jun 7 Quiet
11 Jun 7 Quiet
12 Jun 16 Active
COMMENT: IPS Geomagnetic Warning 16 was issued on 8 June and is
current for interval 12-13 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
09 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Jun normal normal normal
11 Jun normal normal normal
12 Jun normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
09 Jun 31 about 10% above predicted monthly values

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
10 Jun 30 About 10% above predicted monthly values
11 Jun 30 About 10% above predicted monthly values
12 Jun 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 19 was issued on 9 June and is
current for interval 12-13 June. MUFs at Townsville & Hobart were
near predicted monthly values with spread F during local night.

4602. This Week in Amateur Radio #115 (for airing through 6/16/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-09 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <Rw0d13E.sanderman@delphi.com>
Source record: 244809

Here is a summary of news items covered on edition #115 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 16-Jun:

1. STS-70 Postponed, SAREX Mission STS-71 to Dock with MIR
2. Prominent Member of the League Board of Directors Resigns
3. US Astronaut Aboard MIR Make New Hampshire Student Contact
4. Ontario Club Gets Provincial Grant for Repeater Purchase
5. Abolition of the FCC Proposed by Conservative "Think Tank"
6. Chips Planted on Queen's Dogs for RF Tracking
7. QSO with Us on "Internet Relay Chat" Saturday After Uplink
8. "The RAIN Dial-up" from Chicago
9. "EZSATS" with Bruce Paige, KK5DO
10. Upcoming Special Event Stations with George Bowen, N2LQS
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
12. Weekly Propagation Forecast
13. "Amateur Radio Newsline" - Edition #930 from Los Angeles

Funding for the program's transmission and production expenses was provided by a grant from the Blue Ridge Video and Digital Society of Roanoke, Virginia, where "This Week in Amateur Radio" is heard on the WB4QOJ repeater on 145.21 MHz, serving amateurs in Virginia, Kentucky, West Virginia, and North Carolina. Acquisition costs for the "Amateur Radio Newsline" have been provided by a grant from Mark Ross, KO6DG, and Scott Press, KD6YWA. Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community.

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at

518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

Make it simple and accurate: use Bird Dog along with the latest
two-line keplarian elements (sometimes on sci.space). Tested
it out on STS-64 last year, and found you have to start obs
at least an 15 min prior to predicted pass. Maybe this is
due to orbital changes. MIR does not change its orbit that
much that an Space Shuttle usually does. And if you lives
some distance from nearest site on the list, times may differ
a bit from time for real passing.

Have so far not obs MIR, it goes a bit low in the southern hor
for me, I live at 60 deg N, and this spring it has passed at
times it could not be observed, and the wheather....

Good luck.

OOPS, this article was stored to disk, but not sent. But here
it goes! Better late than never. Sorry, folks.

4608. Protection for a LM350K adjustable voltage regulator

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-09 00:00:00 UTC
From: yang@mundoe.maths.mu.OZ.AU
Message-ID: <9516014.5886@mulga.cs.mu.OZ.AU>
Source record: 244835

I am going to build a 1.2-25V, 3A general purpose bench-top power supply. The regulator I am going to use is a LM 350K 3-terminal adjustable voltage regulator IC which was taken from a old computer power supply. My questions are:

(1) What protections have built into the IC LM 350K?

(2) As the power supply is for general purposes, its load could be capacitive, inductive or a battery. The load could be short circuited some times. What extra protection circuits are needed?

Any relevant comments and suggestions would be appreciated.

Thanks in advance

Disaster relief has been a long tradition of amateur radio. In January, 1937 after almost sixteen days in which over twelve inches of rain fell, heavy flooding occurred along the Ohio River valley and the Mississippi river. Amateurs played a big roll in the disaster relief as excerpts the from following article tell. Hope you find it interesting reading.

From RADIO NEWS for May, 1937

Amateurs Swing Into Action for Flood Relief

Amateur radio again came to the rescue and turned in a marvelous record in supplying emergency communication during the disastrous floods that swept down the Ohio River valley and thence to the Mississippi in January.

Amateurs Organize Aid

Amateurs in the flood area quickly organized as soon as word of the pending disaster began to spread. Amateurs of the United States Naval Reserve, of the Army Amateur Net as well as others quickly swung into action. They cooperated with the Red Cross, the U.S. Coast Guard, the U.S. Army Engineering Corps, and broadcasting stations, in answering frantic calls for help and directing where it was most needed.

Radio Minute Men

Amateurs, often have been referred to as the "minute men of radio". Shortwave listeners who had occasion to listen in on either the 75 or 160 meter band during the flood heard them living up to this tradition. The story that was unfolded by their brief, cryptic messages gave the listener a true picture of the disaster far more vivid than it is possible to describe in words. Hundreds of messages were handled by telegraph code as well as voice, and over Army and Navy networks as well as amateur. Local traffic was handled on the ultra-high frequency band of 5 meters between Red Cross headquarters and boats crusing about to pick up stranded refugees.
Some of the typical messages heard:
"...Urgent, call for assistance, urgent: two expectant mothers and one who has just given birth are in need of a doctor"
"...The river at 5 p.m. at 50 feet...It is rising at the rate of a tenth of a foot every four hours..."
"...Send boats, send boats. Third and Breckenridge Streets, seven persons clinging to an overturned boat...this is the third call..."

F. C. C. Intervenes

The task of handling emergency traffic became more difficult as the disaster area spread. More stations in the network were needed, and it was necessary to cover longer distances for the transmission of the emergency messages.
At the request of amateurs, the FCC intervened to restrict all amateur operations in the 160 and 75 meter bands to flood relief traffic messages. Amateurs in other parts of the country did their part by keeping silent unless they had some important traffic that had to do with the saving of lives or rushing medical supplies.

W8YB Outstanding

One of the principal amateur stations to aid in quickly organizing the flood network was that of the University of Cincinnati, W8YB. This station was on the air constantly during the flood. It was through this station that other amateurs operating east and west of the flood zone learned of the emergency.
Broadcasting stations also did their part. They cooperated with amateurs and formed relay networks. Many of the major broadcasting stations suspended regular broadcasts to take part in the relief work. They maintained constant communications with amateurs and were authorized by the authorities to carry on two-way communications with these stations. Some of the stations participating were, WLW in Cincinnati, WHAS in Louisville, WMC in Memphis and WSB in Atlanta.
As far as it is known, this is the disaster in which commercial broadcast stations were pressed into emergency communications service. Ordinarly their licenses prohibit point-to-point communication, but this requirement was waived by the Commission during emergency.
Station WMC in Memphis also pressed into service its short-wave transmitter WABG aboard the steamer Sequayah, and suspended its regular broadcast service for seventy-two hours. WHAS broadcast 16,500 separate appeals for help in five days. It is estimated that at least 100,000 persons were taken from their homes as a result of the broadcast over WHAS.
This cooperation between agencies did much to help the efficiency and dispatch of traffic. Without a doubt, the amateurs participating in this flood relief work were as efficient as any commercial agency. Both amateurs and broadcast stations did a remarkable piece of emergency communication work. Undoubtedly had it not been for their work, thousands would have lost their lives and a great disaster might have been tremendously more disastrous.
Some of the stations that participated in the relief efforts were: W9WMC, W9HQD, W9ELL, W8CXR, W4FK, W9WC, W8YB. and W9RSC.
****
One picture shows an amateur half-way up a utility pole with a 5 meter set strapped to his back. The unit looks to be approximately 12 inches high, 8 inches wide and 4 inches deep. I would think with batteries it would be fairly heavy. Quite a difference from todays handhelds working into repeaters. Notice that 5 meters was considered ultra-high frequency.

In the last 3 years I have contacted thousands of stations.Only 3(!) of these stations claimed to be using a IC-726. I have owned one since May of 1992 and have had no problems whatsoever. I almost always get a good audio report using the simple stock mic.

Where are all the 726"s??? If you have one of these apparently somewhat rare radios why not post to the group about how you like the little devil - strong points - weak points etc. I bet other 726ers would enjoy reading the post!

> handled in the large mainframe computers.

Unfortunately, all terminal manufacturers did not isolate the (interface)
circuitry from the chassis and thus the signal ground (pin 7) was directly
connected to the PE (Protective Earth) bar of the building through the
3 wire power cord. The VT100/VT220 series was particulary problematic
in this respect, with lots of ground potential problems.

> You might want to check
> your computer interface card and your TNC to see what each of them

> the DB25, and a proper cable will not connect pins 1 and 7 together.

No, this is not a sufficient prerequisite. The important thing is what
happens to signal ground (pin 7) inside your PC. This is most likely
connected to the 0 V output voltage terminal in the power supply. To
this point is also connected the signal returns for the monitor and
the signal returns from the printer (and signal ground fom an external
modem). Only if all circuits in all these equipment float in respect to
their respective chasses, only then is it time to worry if the cable
is connected properly.

I very much doubt that you can find a PC installation (computer, monitor,
printer etc..) in which the circuitry floats respective to the chassis and
thus also floats relative to the PE bar in the building (assuming 3 wire
power cords).

> All in all, you may have no problem, but you can fix it in your TNC
> if you have to do it properly. You also could try connecting your

> TNC chassis to the computer only and not to the rest of your ham
> gear which would be tied to RF ground. This would give a potential
> ground loop at the audio interface to the tranceiver, but is not as
> likely to give problems as one at digital circuits or RF circuits.

A simple solution:
Move the TNC to the computer and take the power from the computer
or from a separate (floating) wallwart. Put audio transformers
(say 600:600 ohms) in the microphone and loadspeaker lines and an
opto isolator for the PTT line. The opto isolator can be omitted,
if both ends of the contact in the PTT relay inside the TNC are
floating. The audio transformer only has to pass 300 - 3000 Hz, so
allmost any audio transformer will do, but if you find a type with
high breakdown voltage specification, it might save your computer
even if your station is damaged during a thunderstorm.

To avoid EMC problems from and to the computer, it is also easier to build
filters for the audio cable than for a high speed serial cable (where you
have to be careful not to distort the waveform).

jsoohoo@netcom.com (John Soo-Hoo) wrote:
>Not completely true. If you look at most of the companies, 220 is being
>dropped by some of big name makers of amatuer radio equipment.

..mainly because nobody is buying radios for that band. In Houston, there
are only a few 220 repeaters, while both 2 meters and UHF are heavily used.
We have only two 1200 repeaters here. If there was more demand, there would
be more supply.

>Buyer beware?

Yes, buyer beware. Just buying a radio without doing some research into what
the activity of that band is is foolish.

>Are the airwaves for the use of all hams or just some hams?

I have never argued otherwise, but as a repeater trustee, I was not put on
this earth to build radios for everyone to use. I truly believe that if you
use someone else's station, you should ask first, and you should support that
system, open or closed. I object to anyone assuming that because they have a
license, they have permission to use my equipment. Nothing gets my dander up
worse than to hear people griping about my open repeater having some problem,
or not working the way they want it to...

>The way the 440 FM band is drawn it is clear that the intention of SCRBBA
>is to support the latter rather than the former.

I really don't think so. They support the existing systems instead of the
potential ones. This is the way their organization is set up.

>Although I understand
>you views about the existing systems on 440, I don't agree with your views.

I respect your opinion.

>The band is for all hams. The coordinating body is suppose to reflect the
>wishes of the ham community.

If the coordination body is trying to do _spectrum management_, then you're
right. If they are simply trying to avoid interference, they can do this with
little concern for the potential trustee. Frequency coordinators don't
coordinate for users. They coordinate for repeater trustees. Spectrum
management is a much larger issue.

>If the ham community wants to use the 440
>then it should be able to do so. If the ham community doesn't like what it
>sees on a particular band the coordinating body needs to listen and address

>the problems.

I believe SCRRBA could do a better job of communicating. I do not believe competition is the answer to this problem.

Gary,

Excellent article. One question, however: Assuming you bond
everything properly like a reverse daisy chain to a single point gound
at the meter entrance, is it ok to extend that gound by bonding
multiple ground rods together? Something like this

```
Ground Rod --------+ +--------Stuff in shack
| |
Ground Rod ---------+----------+--------Entrance Panel
| |
Ground Rod ---------+ +--------Tower, etc
```

Thanks,

Larry

I too would caution you from going out and buying an expensive
rig. Ham radio is an expensive hobby and you are going to want to do as
much as poss with your money. My first rig was a 2m hand held, to get
on the air and talk to people. All of my rigs except the first two I bought
are 10-20 years old and they do just fine - any of the modem (ie in the
last 20yrs) (that's modern sorry) rigs - ie synthesized will do 95%
of what the new rigs costing 10x will do. I wouldn't have bought either
of my first two rigs new if I'd had anyone to show me the ropes. The idea of dual banders
seems neat and a lot of people like them. However if something
goes wrong with it, you've lost both bands. If you buy two clunkers
for $150-200 each, if one of them breaks down you still can talk. So
I don't like them myself. You might want to check out how much is happening
on 440 in your area - you might find that it's useless. Be aware when
buying stuff for 440 that other countries don't have 440 and do their
FM'ing in 436-440. Thus FM satellites (I know only of one admittedly,
but you can hear it with a handheld) are at 436MHz. You can't hear that
with your regular US 440-450 FM unit.

Welcome to hamming

Right, Jeff! Even advanced radios are within the reach of most amateurs
thanks to the high integration parts currently available. A complete
5 watt 2 meter FM rig, transmitter *and* receiver, is only 4 ICs. I'd say
it's actually much easier today to build an advanced high performance
radio than it has been at any time in the past. Motorola offers complete
receiver subsystems on a chip, and complete transmitter subsystems too.
Add an audio IC and a small monolithic power brick, and you have a complete
radio. Rick Campbell has shown us how to build no-tune transverters for most
UHF+ bands, and has shown us how to make an effective SSB exciter to drive
them. Then there are radios designed strictly for digital operation. They
perform better than commercially offered radios, yet cost less than one
quarter as much to build, are easily assembled, and are easily tuned up
and operated.

The only real problem hams have is with the cosmetics. Not having
access to custom injection molding equipment, or die casting equipment,
ham efforts are often crudely packaged compared to commercial equipment.
But the guts inside can perform as well, or better, than commercial
offerings.

But Roger has a point too. Most hams *don't* build, even though they
could. I don't know why that is, but I suspect it has, at least partially,
to do with the fact that most of the construction articles that they see,
and most of the kits they see offered on the market, are oriented to QRP CW
operation. Since the majority of today's amateurs aren't interested in that
type of operation, they ignore building because they don't realize that isn't
all they could build easily and inexpensively. A number of amateurs do still
build big honking HF amplifiers, but that isn't cheap (or particularly safe),
though it is easy.

Gary

>
>73,
>
>Jack WB3U

Jack has offered a very thorough and correct solution to your problem. I would like to offer another alternative which will allow you try this solution without much expense.

Many PA systems transform the audio output up in voltage to increase the impedence of the load. Every speaker is then daisy-chained through an impedence matching transformer. This allows for reduced line losses in the system.
To make a long story short, the transformers at each speaker have approximately a 10K winding and an 8 ohm winding. They are called 70 volt CV transformers and any shop that handles PA equipment should have an old one laying around. Try it and if it workes then buy the one Jack suggested and effect a permanent solution.

>as pissed as you...

I believe you. However, you are out there in Texas, whereas I am an active VHF/UHF (although not much uhf!) user, right here in Southern California. I am a paying member of several repeaters. Consequently, I feel confident that I am in a better position to guage the feelings of radio amateurs out here, on this subject, than you are.

The fact of the matter is, there simply is no question that most hams out here absolutely hate SCRBBA and what it has done to 440. There will be little trouble getting considerable support behind an effort to eliminate them.

>What about 220, 1200, 6 meters, etc.? Radios are just as available on
other
>bands as they are on UHF. The point is the most vocal people are griping
>about UHF because they've found out half of their brand new $600 radio is
not
>of much use to them... buyer beware.

What about 440? Hogger (SCRBBA) beware. You have abused a public trust.

220 **is** better than 440, but not by much. Furthermore, multi-band radios for it are less common and more expensive due to the fact that Japan, where the radios come from, doesn't assign 220 to amateur use.

>
>Thay'll still have to deal with the existing systems somehow...

Sure. Let 'em stay up. Most of them see little use anyway.

>
>>Right now 440 is completely useless to most hams.
>
>..except for those hams who already have and/or use systems there. This is
>not an insignificant number of people.

Even one person is not "insignificant" IMHO. However, right now the situation is completely unacceptable to **most** people. From your perch in Texas, it is clear that you are unable to perceive this.

>Jeff NH6IL

Jeff, I have built my own receivers, transmitters, and automatic keyers, as well as my own linear amplifier, in my day. When I was a teenage ham back in '67 the ONLY way I could get gear was to either build it, or repair and modify old heathkit or war surplus stuff. So I'm aware of what you say. On the other hand, in all my days on VHF/UHF, I have NEVER ONCE, to my recollection, worked someone using homebrew equipment. Therefore, I think my comment was within the realm of reason.

The point is, that while homebrewing will always be an honored and important part of our hobby, the day when **most hams** homebrew at least part of their station is gone. Not saying that's good or bad, but I am saying it is true.

But I didn't want to give anyone out there the impression that you can't build stuff. You can, and it's fun.

Assuming the interference is comming from a ham station, it may not be the "fault" of the ham. In many interference cases, the emissions from the ham station are completly free of excessive harmonics and spurious emissions. The TV sets in question simply don't have the circuitry needed to reject out of band signals. Many manufacturers leave out such features as a cost saving measure, and hope their buyers don't live too near other transmitters.

someone writes:
>You email vk1aa@vk1aa.ampr.org this will probably get through.

It won't, because vk1aa isn't a participant in the AMPRNet.

gary@ke4zv.atl.ga.us (Gary Coffman) writes:
>That has essentially zero chance of getting through. Net 44, IE
>ampr.org, is disjoint from the internet. Your mailer will get a
>host unreachable message if you attempt this. Even if the amateur
>TCP/IP subnets were interconnected with each other, and the net
>joined to the internet, this address form would only work for
>amateurs with active TCP/IP stations up and running at the time
>of the mail transmission.

This is incorrect.

Network 44 (the AMPRNet) is an experimental network. It is itself
disjoint; there is no overall connectivity between all parts of the
network. However, by the use of techniques of 'tunnelling' and
encapsulation (as are currently being developed for the mobile-IP
community), connectivity between these disjoint portions of the
AMPRNet is maintained and actually works rather well.

Many of the AMPRNet stations have arranged with well-connected Internet sites
to forward mail for them. Of the 30,000 addresses registered with the
ampr.org domain, more than 3,000 of them have designated mail exchangers.
Mail to these latter hosts generally works well from the internet.

(Don't ask for a list; it changes constantly and any possible list would
be out of date immediately. Just TRY to send the mail; if it fails,
it fails.)

If you were to attempt to send mail to vk1aa@vk1aa.ampr.org, your mailer
would report "Host Unknown" because vk1aa doesn't have a mail exchanger
registered with the ampr.org domain.

However, because of concerns over authorized operation of transmitting
equipment, stations participating in the AMPRNet do not forward
packets to and from the Internet directly. Mail forwarding is
reviewed manually before being transferred to the radio.

If you want more information on this continuing experiment, you might
want to consider the book "Nosintro" by Ian Wade, published in the UK.
I think you can get it from the ARRL. Don't write to me; I don't have
time to respond - sorry.
- Brian

I realize that most people (even hams) will probably never be faced
with a similar situation, but I think the usefulness of the Morse code
in unusual situations is one of the best reasons to learn it, at least
to the 5 wpm proficiency level.

: street. Unfortunately, the fellow living there, and presumably operating a
: rig that is causing the interference, is a recluse and won't answer the
: phone come to the door. What is the most sensible approach to putting an
: end to the interference? Who do we call? How do we even know if the guy's
: liscensed? Is it possible for us to take care of the matter and still
: remain anonymous? (The neighborhood actually fears the guy. Fear of the
: unknown, so to spreak.)

Jim,

To sum it up in a real nutshell, the interference *could* be *caused* by
the radio station or it could be caused by the inability of the televisions
to "tune out" a nearby signal.

I am sending you by email the electronic copies of the several applicable
ARRL information packages about interference. This should get you started.

If the fellow is an Amateur Radio operator ("ham"), we may be able to find you and
your neighbor some local help from other ham volunteers. Read over the
material, then call me here at ARRL Headquarters (203) 666-1541.

Good luck, 73, Ed

4639. GB2RS News 11th June 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-09 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <802749326snx@llondel.demon.co.uk>
Source record: 244866
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 11th of June and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First the headlines:

The callsign G5UM has been reallocated,

We have news of several VHF DXpeditions,

and in the solar news we have reports of excellent sporadic-E propagation.

Mrs Grace Hum, widow of former Leicester Radio Society President Jack, has given her permission for his callsign, G5UM, to be re-issued to the Leicester Radio Society Contest Group. The re-issued callsign will get its first airing during RSGB VHF National Field Day on the 1st and 2nd of July.

The 1995 Scottish Islands Expedition began yesterday, Saturday the 10th of June, on Islay where it will remain until Tuesday the 13th. On the 14th the expedition heads for Colonsay and Oronsay before moving on to Jura on the 15th or 16th. The next port of call will be Mull, from the 17th to the 24th of June. In addition, a trip to Iona is scheduled for the 21st. Operation will be on two metres, six metres and 70 centimetres using the callsign GS7UEG. Check the frequencies: 50.122, 50.222, 144.222 and 432.222MHz. HF operation may also be possible with GM0NES/P.

Stroud Radio Society will be embarking on a DXpedition to Steepholm Island from Saturday the 17th to Monday the 19th of June. The island, situated in the Bristol Channel, has been the site of amateur radio operation on only two previous occasions. Continuous operation is planned on all HF bands, 6 metres and 2 metres on both CW and SSB using the callsign GB0RS.

The 50MHz Cape Verde Islands expedition is due to remain active until Wednesday the 14th of June. Six metre operation will be centred around 50.110 MHz on both CW and SSB. The group, led by Geoff Brown, GJ4ICD, will also operate on all bands from 10 to 160 metres.

A list of Senior Novice Licence Instructors appeared on page 96 of the June issue of Radio Communication. An incorrect callsign was shown for Mr D R Parker, Senior Novice Licence Instructor for Northants. His correct callsign is G6FJF. Anyone wishing to join a Novice Licence Course should contact RSGB Headquarters for details.

A reminder that RSGB Headquarters is open on Saturday, the 17th, from 10am to 4pm. The bookshop, museum, library and GB3RS shack will be available to visitors.

Now news of some special event stations at home and abroad:

The Rotarians will be holding their International conference in Nice between Saturday the 10th and Thursday the 15th of June. The ROARS special event station will be based across the border in Monaco, using the callsign 3A2RAR. The Dragon Amateur Radio Club will be operating GB2CPC at Eryri Association's flower festival from the 15th to the 19th of June.

Now some items of HF DX news from the RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From St Paul Island, off Newfoundland, W5IJU will attempt a transatlantic 144MHz contact whilst with an expedition taking place between the 27th of July and the 2nd of August. Anyone in Europe or Africa wishing to make a QSO with him should send him a schedule including UTC time and date. Just prior to the scheduled time, W5IJU plans to use 28.870MHz for a contact frequency. Anyone succeeding in making a contact is eligible for one of the Brendan Trophies, full details of which appeared in the June RadCom.

And from Tuvalu, T20XC will be operational until the 14th of June. The expedition was delayed in Fiji but was expected to move to Tuvalu last Wednesday, the 7th.

Next the Rally News: Today, Sunday the 11th of June, the Elvaston Castle National Radio Rally takes place at Elvaston Castle Country Park, near Derby. Talk-in is on 2 metres and 70cm, channels S22 and SU22.

The 6th annual Belfast Rally takes place today, Sunday the 11th, at the Chimney Corner Hotel, Antrim Road, Glengormley, Belfast. Doors open at 12 noon.

Also today, Sunday the 11th, the Royal Naval Amateur Radio Society Annual Mobile Rally takes place on the HMS Collingwood Sports Field, Fareham, Hants. Doors open at 10am and the event includes an RSGB book and information stand.

The RSGB Bletchley Park Amateur Radio and Computer Rally will be held on Saturday the 17th and Sunday the 18th of June at Bletchley, Milton Keynes, Buckinghamshire. This is a new family event which is held at the historic wartime secret communications centre. The entrance fee to the rally covers entry to the Bletchley Park museum. Doors open at 10am on both days and talk-in is provided by GB2BP on 2m and 70cm. Telephone 01923 893929 for details. Three pages of information on the event can be found in the June edition of RadCom.

The Denby Dale and District Amateur Radio Society Rally will take place on Sunday the 18th of June at Shelley High School, Skelmanthorpe, Huddersfield, West Yorkshire. Details can be obtained from Kevin, G1FYS

on 01484 547553.

The Newbury Boot Sale also takes place on the 18th of June at Acland Hall, Cold Ash, near Newbury. For details call George on 01488 682814.

From Friday the 23rd to Sunday the 25th of June the Amateur Radio Caravan and Camping Rally will take place at Tutbury in Staffordshire. For details telephone 01494 531755.

The Friedrichshafen {pronounced Free-driks-harven} Hamfest, the largest amateur radio rally in Europe, takes place from the 23rd to the 25th of June on the shores of Lake Constance in Southern Germany. Details can be obtained from Wilfred Spreen or Heinz Kamper on 00 49561 949880.

And a reminder of a rally cancellation:

The Gordon Schools Amateur Radio Club has announced that the North of Scotland Amateur Radio Convention - the Gordon Rally - which was scheduled for Sunday the 18th of June, has had to be cancelled.

Now for the HF contest news:

The All Asian CW Contest takes place from 0001 UTC on Saturday the 17th of June until 2359 UTC on Sunday the 18th of June. The contest is on all bands from 1.8 to 28MHz excluding the WARC bands.

Next some VHF contest news:

The Annual Practical Wireless 144MHz QRP Contest takes place on Sunday the 18th of June from 0900 to 1700 UTC. Maximum transmitter output power is 3 watts. Full rules can be found in the June issue of Practical Wireless.

Also on the 18th is the RSGB 70MHz CW Contest which is from 0800 to 1100 UTC. The full rules can be found in the March RadCom.

Following the 70MHz event, the 2nd RSGB 144MHz Backpackers Contest takes place. It starts at 1100 and ends at 1500 UTC. The rules are on page 83 of the April RadCom.

Now some repeater news:

The Humberside 2m repeater, GB3HS, is now back in service following a mains supply fault. Further information on GB3HS can be obtained from G7JZD.

And now the solar factual data:

The period from the 29th of May to the 4th of June saw solar activity at very low levels and the geomagnetic field up to active levels. On the 2nd a major sporadic E opening took place. Sunspot numbers increased slightly over the period, from 17 on the 29th to 35 by the 3rd, with a mean of 24. Solar flux levels increased from 67 units on the 29th to 79 units by the 4th. The average for the period was 72 units. Solar activity was very low and no flares were reported. The electron fluence

increased from moderate levels up to very high levels from the 1st. The x-ray flux increased slightly from A1.0 units to peak at A5.9 units on the 3rd, before declining to A3.8 units the following day. The average for the period was A2.4 units. The 90-day solar flux average on the 4th was 79 units, which was one unit down on last week.

Geomagnetic activity started the period at quiet levels, conditions increased to active levels on the 31st and the 1st with an Ap index of 23 and 25 units respectively. From the 2nd, levels declined and were back to quiet by the 4th. The average for the period was Ap 15 units. The state had been 'mag alert' up to the 31st. The aa indices, as supplied by the British Geological Survey for the period from the 23rd to the 29th of May, started at active levels with 44.1 nanoTeslas reported on the 24th. Levels then declined, and by the 27th were down to quiet conditions, with 11.6 nanoTeslas recorded. The average for the period was 24.0 nanoTeslas, about K3. The mean monthly RI sunspot number for May 1995 was 14.7, with a maximum of 43 on the 17th. A minimum of zero was recorded on the 2nd and on all days from the 23rd to the 27th. The smoothed RI sunspot number for November 1994 was 26.3. The latest forecast for sunspot minimum is a smoothed sunspot number of 12. With a decline of between 1 and 1.5 sunspot numbers per month that makes the minimum at least 12 months away, or even longer if we get a lower sunspot number at minimum.

I'll repeat the figures: spots - 24, flux - 72, Ap index - 15, x-ray flux - A2.4, May spots RI - 14.7.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 26th of May to the 1st of June, saw levels increase from 6.0MHz on the 27th to peak at 8.4MHz on the 30th. Levels collapsed to only 5.8MHz on the 31st and the 1st, due to the high geomagnetic activity. Darkness hour lows declined from 3.0MHz to 2.5MHz over the period. The highs averaged 6.4MHz and took place around 20.00 hours and the lows averaged 2.8MHz and took place between 03.00 and 04.00 hours.

No doubt the highlight of the week was the sporadic E opening on Friday the 2nd with double hop Es to Israel and Cape Verde Island. G4FVP in County Durham reported that the 1st started quiet with an afternoon aurora. However, 50MHz recovered by mid-evening with intense Es, and the Crete beacon was still heard after midnight. On the 2nd, GM0CLN in East Lothian found the 2 meter band open to Italy from 1507 to 1545. Sporadic E tends to be more intense during the sunspot minimum years due to the higher levels of electron fluence that takes place at this time.

I'll repeat the figures: highs-6.4MHz, lows-2.8MHz.

And lastly the solar forecast.

This week the active side of the sun will be rotating away. Solar activity could well be at low levels for the first half of the week.

Solar flux levels are expected to decline as the week progresses. Geomagnetic activity is expected to increase up to sub storm levels for the first half of the week and then decline to quiet to unsettled levels for the remainder of the week. Ionospheric MUFs for the south during daylight hours should increase later in the week, reaching 19MHz. The figure should be 16MHz for the north. The darkness hour lows are expected to be about 11MHz. Major sporadic E openings could occur whilst we are still at the peak of the season. They are more likely on the more quiet geomagnetic days, but not the very quiet days. Those with a Kp index of 3 or a daily Ap index of between 10 and 15 would appear to be the most favourable.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Charlie and G7 Uniform Romeo series, and Novice calls in the 2 0 Alfa Lima and 2 1 Echo Delta series.

Radio Shack - $39 a pair. I'm not sure whether they're simplex or duplex.

>get products out without them.

Nope! It's the thought of the plumbers, teachers and bakers leaving our hobby that makes me shudder. If ham radio will be ruled by communications engineers, physicists, radio technicians and computer experts, what will *we*, the bakers, plumbers and musicians do? Look for another hobby, because we are too stupid to build our own TNCs or program our computers?

To me, operating has always been more fun than developping a new technical gadget, apart from the fact that my education was a little on the light side, when it comes to electronics. Does this make me a second class amateur? I don't think so.

I think the entire discussion pro and contra CW misses one important point: If we consider CW as not essential for the access to shortwave bands, why don't we dispose of other parts of the exam, too? For instance: Why should I know anything about satellite operation? I never intend to use a satellite. Or: Why not discard all sections related to vertical antennas? I never intend to use a vertical, because a) I believe in yagis only, or b) I will get my next vertical from my local dealer anyway.

Hmm, we can think this idea one step further: Eliminate all different license classes, create a new one called "SuperExtra" with all full privileges. Application for this license will be done by a questionnaire that contains questions about what special topics in ham radio you would want to be examined, and which parts of ham radio you don't like or are not interested.

The result then would be that every ham is happy, because he did not have to feed his brain with unnecessary stuff like electronics, propagation, operating procedures, or <whisper> CW.

There is no solution that will make everybody happy, so beware of simple sounding solutions. Indeed, it sounds simple enough to abolish CW as a prerequisite to operate the HF-bands. Once you have achieved this, you will be confronted with all the CBers calling for full access on the bands without exams, because they will *rightfully* argument on the same line: There is no necessity to learn anything about electronics and propagation

to fiddle with the dials of a modern rig.

Anyone out here *not* shuddering at this thought?

Greetings, Peter
KE4UNQ

John Soo-Hoo (jsoohoo@netcom.com) recently wrote
in <jsoohooD9vFqy.3M1@netcom.com>:

<snip> in discussion of southern california 440 repeaters...

: Which currently is predominantly private or closed. I would grudgingly
: allow private systems on ham radio. Honestely I think private systems
: don't belong on amateur radio at all. Private systems belong on the
: business band.

The amateurs on 40 and 80 meters are operating private stations...unless
you know them, you can't just invite yourself int their shack and operate.

Wasn't it just last year when the Commission sent a letter to a 2 meter
trustee in the Los Angeles area telling him he must control his repeater
station in regards to the transmissions taking place on the input frequency?

In effect the notion of open is no longer...all repeaters are closed and
the control operator and trustee may have to take more responsibility as
to repeating unlawfull traffic on the repeater input frequency.

: >There's not a "quick fix" answer to this problem.

: No one here believes there is a quick answer to this problem (I hope). But
: it is clear that SCRRBA is not willing to do anything or will be faced
: with opposition within their organization to fix the problem.

OK...just what rule of coordination needs to be changed? A coordinator
can not tell a repeater trustee what kind of traffic to run, whether it
operates with the traditional open closed or private memberships.

I find it difficult to beleive there are vacant repeater frequencies left
in any metro area of southern california. Coordination of a repeater is
usually done by coverage area, not by a strict milage separation here in
california. Any coordinator who hides behind a milage separation scheme is
not really coordinating the band. This coverage based type of oordination
involves the active participation of all the parties on the co-channel as
well as adjacent channels closer than twenty kHz.

I would think your problem is really with existing trustees who operate
their coordinated repeaters in a less than optimal configuration. Many may
be turned off and only turned on when the sole trustee user wants to play.

I agree many of these types of systems could share a frequency, but they
would all have to agree...the same applies if you were to share with one
of these remote base stations. The bottom line is your station should be
able to operate simultainiously with the other coordinated stations with
out causing interference to each other or you should have a letter of

agreement from those stations.

In most areas of the country these letters of agreement usually define the operating paremeters of the sharing repeater stations. When you share a frequency one does not have unlimited or open use of the frequency. Closed repeaters can reshare spectrum, as is done in southern california. The trustees agree to operate with some constraints. The membership of each group understands these constraints. This differs from the inefficient open repeater plan that allows anything and everything to deny a nearby close repeater share of the frequencies.

Tell me that a wide area open 2 meter repeater serves the community any better than several 440 closed repeater or remote base groups that all agree to share the frequency at the local level.

Before you can even begin to change the rules of coordination in your area, you have to get the majority of repeater trustees as well as the users of the band to agree. This can work and is done all the time within the different coordinating areas.

I know the 220 coordinating group in southern california had to change its rules recently at the direction of the Commission. What general rules would you change to the 440 coordination structure in your area, that are now being applied on the other bands?

Bob

>>...gives the time anywhere in the world...

IF you're using MS Windows...I have a great, inexpensive solution for
you!

AccuSet Version 3.5: System Clock Enhancement Utility. Features
include: precise synchronization with either the NIST/USNO/Italy/Austria/
Sweden/Australian/UK/Canadian atomic clocks; commercial-quality digital or
text interface; Determines the accuracy of your PC's clock and can adjust the
time based on its error rate; Can display the date and time for five cities
across the globe; Synchronization and error compensation features can be
automated via startup parameters; Call logging; Easy to use and configure;
can disable call waiting; automatic modem detection; international date/time
support; automated DST support; Title bar clock; works with any speed modem.

Other Information

Requirements: Windows 3.1, 3.1 or 3.11, in Enhanced or Standard mode.
Hayes-Compatible Modem, Visual Basic 3.0 Runtime

AccuSet is also compatible with OS/2 2.X and OS/2 Warp

*** This version of AccuSet will not run with Windows/NT
(a Windows/NT-specific version is being developed)

Registration: $10 U.S. Funds (Check or money order)
(PA residents add 6% sales tax)

Add $5 for printed User's Manual

Can be registered via CompuServe's Software
Registration forum (GO SWREG). AccuSet's program
ID is 2407.

This is not the case in California. Although 220 equipment is getting
harder to get, but there are multitudes of 220 repeaters and a big demand for
220 equipment for Southern California. The demand for 440 equipment
is even bigger here in SO CAL.

>
>>Buyer beware?
>
>Yes, buyer beware. Just buying a radio without doing some research into what
>the activity of that band is is foolish.

Here in SO CAL, many hams want 2m in addition to another band. 440 is
most often the other band offered in multiband radios. Unless you wish to
lose the entire passenger seat to another radio, the logical choice is to
get a multiband radio.

When I started in the hobby, I started with a dual band 2m/70cm ht. I started
to use 2m, but found it often crowded so my buddies and I would then move over
to a 440 frequency. This worked out great, but as more hams joined the hobby
the open repeaters became crowded. There was no other open system to run to
for rag chewing. We knew that most of the systems in SO CAL were private
followed in a far second closed. We talked to other people who where interested
in putting up open repeaters on the band but found that the coordinating
committe had the band locked up. We looked into the systems that were in
operation and found some that were used minimally. I have personally
observed some frequencies that have had no activity for a whole week!

Some of these private systems should be moved off and consolidated. There is
no reason why they should have exclusive rights to a single frequency.
Especially when there are groups who would like to put up an open system for
law abiding hams to use.

Believe me, I've listened to a pair that has 3 repeaters assigned to the
frequency, and I have still to hear a cw id or anyone talk on that pair.

>
>>Are the airwaves for the use of all hams or just some hams?

Gripes come with the territory. But you know that. Open repeaters are
defined here in CA as open to any licensed operator to use. Plain and
simple. Along with that, users of all repeater need to govern themselves
and follow Part 97. Support is purely on a voluntary for open repeaters.
Owners of repeaters have the right to determine who can use your equipment.
No one is denying anyone of that right. But the frequency on which a
repeater operates is granted by the coordinating body of the geographical
area.

Repeater trustees should not be forced to build radios for everyone to use.
Those wishing to have a closed radio system should be allowed to do so, but
only on designated frequencies. The same goes for private systems and
open systems. Right now the spectrum is drawn up in such a fashion as to
favor the private systems. This was okay when there were so few hams owning
440 equipment, but that is not the case case anymore. .

The spectrum needs to be drawn up in such a manner where open/closed/private
systems all have a good representation in the spectrum (last I looked open
pairs occupied a little over 3% of the spectrum and this is with 44 open
repeaters in the entire SO CAL).

Okay, I think I see your point here and let me throw this in. SCRBBA does indeed do what you call "spectrum management" for 440. They do not simply coordinate for repeater trustees but actually manage the 440 spectrum.

>

>competition is the answer to this problem.

Your are right about SCRRBA could do a better job of communicating, but a number of groups and individuals I have heard have tried to get a hold of them have had no success. Inquiries that I've heard about have been usually ignored and no response is ever received. Competition in my opinion is what is needed to give SCRRBA a kick to get them moving.

Indeed. Ten Canadian "peacekeepers" have been killed over there, and the knowledge of Morse code would not have saved them none the less.

Although I do not watch U.S. news reports, from what I have read in the news groups, there has been no confirmation that Morse code was used as the communications to rescue this pilot. The military, and the US particularly so, have this propensity, and advisedly so, to mislead the press in certain facts. It would not be in their interests to proclaim to the world what the actual means were used to communicate with this individual was CW - which is easily subject to counter-measures. Secondly, it has yet to be confirmed that the pilot did indeed study Morse code during his survival training. This would be bizarre that pilots would be given extensive training in this form of communications because on the balance of probabilities, if rescue is required, Morse code is not likely to be of much use. Therefore,

> How about insisting on religious training as well. The pilot was also
> quoted as "thanking God that I'm alive" in addition to stressing his
> beliefs in said God.

Because that's an "oranges and apples" comparison. Knowing the code
isn't akin to developing religious beliefs (well, it may be a religion
to *some* ;-) but it does parallel with a pilot learning other "skills"
which are not directly related to flying an F-16, such as survival skills,
rudimentary medical skills; knowledge of how to disassemble, clean,
reassemble, load, and fire a sidearm; knowledge of how to identify edible
plants, insects and animals; knowledge of how to collect rainwater or
purify groundwater; etc., etc. Knowledge of Morse code falls right in
that category because it can be used with a radio, a flashlight, or a
piece of reflective material for signaling purposes.

None of the above have anything whatever to do with *flying* an F-16,
and just like the code none of them will be needed *unless* the pilot is
shot down (or crashes in rugged terrain, away from civilization). In
the case of shootdown, all of those skills (including knowledge of Morse)
MAY be useful at some point, or they may not. But it would be an
imprudent pilot indeed who ignores his/her training in any of these areas
"because its boring" or "its irrelevant" or "its obsolete." Catching
animals with a handmade snare is "obsolete," but like the Morse code it
can be a valuable thing to know.

As for the religious aspect, if he derives inner strength from his
beliefs, good for him. IMO that gives him an "extra" edge over the
person with no beliefs. But the military cannot insist on religious
training, as it's forbidden by the Constitution (separation of Church and
State). Morse ain't a religion, so like snaring animals and finding
water it can be taught - and should be, IMO (as a survival skill; I'm
not talking about Morse testing for hams).

>Well, guys, at least Mr. Reese has openly admitted the following:
>
>1) SCRBBA exists only to serve its own members (which it limits. Doesn't
>include you or me, fellows.)

Mr. Reese defends the position that coordinating bodies should serve
the trustees. I would agree with him if coordination to limit interference.
But SCRBBA is not only a coordinating body, but also an organization that
handles spectrum management. Taking this into consideration, SCRBBA is
answerable to BOTH repeater trustees/owners and the general ham community of
440 users.

>
>2) Mr. Reese thinks that's just fine.
>
>Mr. Reese is entitled to his position. Just remember that his comments all
>derive from the above attitude. Those of us who feel that 440 should be for

I don't think Mr. Reese is fully aware of the problems in SO CAL. You are
being MUCH too harsh with him.

>>I believe SCRRBA could do a better job of communicating. I do not believe
>>competition is the answer to this problem.
>
>I believe that SCRBBA has communicated its attitude quite well and that
>competition is EXACTLY what is needed. From his distant perspective in
>Texas, Mr. Reese has concluded otherwise.

From Jim's last message I got the impression that he believes SCRBBA is JUST
a coordinating body, and not an organization that handles spectrum managment.
This is what I believe is the source confusion. SCRRBA handles BOTH.
Mr. Reese may not be aware of this and thus maintaining his position.

Gary, this is perhaps the best piece I've ever seen on this topic, particularly considering that it was written within the space constraints of a news post. It is so good, in fact that I've save it for reference, something I seldom do.

I do have one reservation regarding the above paragraph, however. The level of detail you refer to is more properly described as cost of construction. This is the weak link in amateur lightning protection and the reason why most (if not all) amateur installations will never withstand a direct strike, let alone provide operator safety under such conditions.

Anyone who has ever seen a four foot thick concrete base under a commercial FM tower shattered from lightning knows what I'm talking about. There was even an article in the news recently, about a woman who was electrocucted in her bathtub when lightning hit the *underground* water pipes leading to her house.

My point is, in a direct hit, lightning takes *many* paths to ground, not just the shortest or largest cable which we provide. Even assuming that sufficient protection could be guaranteed to the equipment, the operator remains at risk as only a few milliamps are required to stop the heart.

For this reason, barring an expenditure of many thousands of dollars to install protective measures, absolute protection means staying off the air during a lightning storm and disconnecting *all* leads to the equipment. There are no exceptions to this rule.

And of course, from the master himself:

>From: brian (Brian Kantor)
Subject: Re: I thank you much.

Spelling is important because correct spelling aids in correct understanding and efficient communication; incorrect spelling promotes misunderstanding.

English is a sufficiently complex and intractable language that misspellings can often alter the meaning of a sentence or phrase sufficiently that the author's intent is twisted or misconstrued by the reader. Just as a computer DEMANDS that the key words of a programming language be correctly spelled, for unambiguous human communication, written English must be correctly spelled.

Additionally, when reading a message (whether a simple memorandum or a sizeable paper), the recipient cannot help but wonder WHY words are misspelled. Is the author sloppy? Did he simply not care enough to get it right? What if this person takes as little care in the other things he does?

Correct spelling reflects favorably upon the author; incorrect spelling detracts from his image. In many cases, written communication is the only contact people will have with you. The impression they gain of you from your writing will influence their behavior towards you, and can thus greatly affect your life.

Clearly, one would not wish to have misspellings in important documents such as a resume or job application. But other documents matter too, and you should take as much care in preparing them as you would wish the reader to believe you took.

Good spelling takes care. For some blessed few, it comes naturally; for the rest of us, it requires effort. Practice may not make us spell perfectly, but it cannot help but improve the way we spell - and that will improve the impression we make upon the world around us.

Tools abound for helping the poor speller. Dictionaries, computer spelling checkers, lists of commonly-misspelled words, and so on are all available to anyone who wishes to improve their spelling. Given the importance of correct spelling, and the necessity of presenting one's self in the best light possible, one simply must strive to spell as well as one can. To do less is to shortchange yourself.
- Brian

There should be two separate grounds in the shack - one for the AC
supply and one for RF. Now then comes the confusion, which equipment
should be connected to what. For sure, all the RF output equipment
should go to the RF ground by a low impedance path, and ideally, all
power supplies should be returned to the AC ground. Notice that I
was careful not to say 'equipment chassis' in any of that.

The voltage difference between AC ground and the low impedance RF
ground should be low, maybe a volt or so, but if its higher than
that, check into the cause before doing anything more becauses you
have a potentially dangerous situation.

Take a look at the power cords on your equipment and see which have
3 wire plugs, these will be more difficult to connect to your RF
ground, because by doing so, you have interconnected the AC and
RF grounds.

Interconnecting the grounds may not be a problem in general and
many times you can do it with no ill effects, but be aware that
doing so can cause circulating currents in the whole ground
system which will cause ground circuit noise (result of ground loops).
Separate the grounds often and check for a voltage difference

as a safety precaution. CORRECT THE PROBLEM BEFORE POWERING THE EQUIPMENT.

All power supplies with the output isolated from the chassis should be connected to AC ground only.

Computer chassis are grounded to the AC ground (and good digital design demands that this be only at one point for any one machine. this is why the RS232 interface defines a chassis ground and a separate signal ground. Not all cable manufactures implement this distinction. By convention, the chassis ground is connected to the cable shield and this shield is connected only at one end (usually the computer end). The serial interface card would then handle the signal return (ground) only. This is the way ground loops were handled in the large mainframe computers. You might want to check your computer interface card and your TNC to see what each of them do with pin 1 of a DB25 connector, if it is like the large mainframe implementation, the interface card will ground pin 1 to the chassis and the TNC will leave it open. Signal return will be on pin 7 of the DB25, and a proper cable will not connect pins 1 and 7 together.

All in all, you may have no problem, but you can fix it in your TNC if you have to do it properly. You also could try connecting your TNC chassis to the computer only and not to the rest of your ham gear which would be tied to RF ground. This would give a potential ground loop at the audio interface to the tranceiver, but is not as likely to give problems as one at digital circuits or RF circuits.

Good luck with it,
73,
Don W3FPR

Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc,alt.radio.pirate

The following brought on a fleeting thought about band allocations in other countries besides the U.S. I know that much the allocation of the RF spectrum is by international treaty. But there are some differences. In the U.S. when we talk about the FM band, we automatically assume the freqs are 88 to 108. But in Japan, and maybe other countries, the freqs go lower, something like 87 or so.

What I thought, is that there needs to be a chart somewhere that tells of the frequencies of the different bands and their allocations. This is easy to find for myself in the U.S., but I wouldn't have the slightest clue about what the airband freqs are in the U.K., as mentioned below.

For those in the English speaking countries, there shouldn't be much problem getting info and trading with other English speaking countries. But others, I dunno.

I can make some blanket statements about band allocations, mainly pertaining to the HF and below. They're pretty much the same worldwide, so that different services will work worldwide. But starting at 30 MHz and up, things are somewhat different from country to country. Such things as the TV bands are different because they use different transmission methods. U.S. TV channels are 6 MHz spacing.

Is there some place where we can go to find out this information? Say I'd like to know what the airbands are in the U.K. - can I just find a ham directory on a U.K. system with info on their band allocations? Probably not?

Back to the following. I bought a Radio Scrap Patrolman radio, long ago when scanners were rare and expensive. This is a multiband radio that has FM BCB and VHF HI, LO, and UHF. The same FM detector and IF is used for all four bands. The VHF and UHF bands are practically useless in this metro area bacause the bandwidth is so wide that multiple stations come in on the receiver. There is no way to tune it accurately. So yes, the following situation is very true.

You can scrounge a UHF tuner from an old TV set and connect it to a 9 volt battery or other power supply to get it running. Then feed the downconverted output into another receiver to get enough gain to hear a reasonable signal. You won't be able to set it accurately, since the tuning is just too sloppy for narrowband FM. But you can play around with it to see how it works. And the price is right: free. The old tuners were analog mechanical designs, with the capability to tune to CH 83, which is on the high end of 800 MHz. The newer tuners are all electronic, and can't tune higher than Ch 69.

I do not believe SCRRBA is doing a good job of spectrum management. They need
to be more responsive to problems such as these. Because these problems are
entirely political in nature, it is unpleasant to deal with them.
Unfortunately, they will have to do this eventually, or they cannot survive.

Frequency coordination and congestion are no different in Texas than in
California. The very same problems and accusations are present here as well.
California just saw the result sooner because of the larger numbers.

>The fact of the matter is, there simply is no question that most hams out
>here absolutely hate SCRBBA and what it has done to 440.

All this happenec 20 years ago when NOBODY CARED. Now, it's going to be hard
to deal with the existing operations. That's the point. If another
coordinating group has convinced enough of these trustees that it's in their
best interest to go off the air to make room for more open systems...more
power to you. I doubt it will be that easy, though.

We will adapt, old chap. Just not the way you want us to. You'd have us say: "Gee, its too bad all the old geezers want 440 and want the rest of us to stay off of it. Gosh, we'll just have to tamely let them keep it for themselves. After all, they were there first. It belongs to them." Not likely, bub.

SCRBBA needs the boot. We should simply start coordinating new repeaters, open ones, on disused pairs on 440. Let them deal with it.

Once again, your ignorance of So Cal's situation is plain. We've only pointed out about a million times that most of the 440 pairs are rarely used. No activity is the norm on 440.

I take it from your post that you are not a licensed ham. The first step to take is to try to determine if this fellow is a ham or a CBer, since both could have a 'yagi' antenna, although few CBers would even know what one looked like.

Take a look at his automobile to see if he has callsign license plates? If not, maybe a search of the address in a CD ROM callbook might yeild some results. I am assuming he is unapproachable and can not simply be asked?

Approaching the FCC with this information may or may not be helpful. Did the interference start right after the antenna was installed?

You are going to have to become a private detective and learn as much about this person as possible before you can expect to get anywhere.

Perhaps a well written letter mailed to the address might work. If he is a ham, he will likely respond to a letter..

If you need more specific help, please feel free to email me.

No question about the performance. The mobile rig is more powerful. I don't know about using the mobile in an apt. You would need the added expense of an antenna and a power supply. While a HT's rubber ducky isn't that great, it does a good enough job on 2m (I haven't been able to get 440 out of my apt yet). I haven't had a problem putting out a good signal with my HT (while it is in my car it has 5w) and I can hit all of the repeaters around Rochester, NY with FQ.

>You're right that an all-mode rig isn't likely to be a popular choice,

>vehicle, will be a much more favored choice even if all it can do
>is FM.
I haven't had any intermod problem with my HT, and if necassary you can get an amp. However, around a city, I don't think it makes a real difference whether you have 5 watts or 50 watts. I have been able to hit most repeaters with low power, and some with EL (extra low?) power of .5 watts.

>Far from being the best general tool, the HT should be viewed as
>a specialized tool designed to fill the foot mobile niche. While
>it *can* be pressed into other uses, it will be far from the optimum
>choice for those other uses. That's why I suggested that the poster

>it isn't foot mobile, a HT may be a niche luxury that can wait.
I agree that it isn't the optimum choice, but I still see it as a general tool. You can use it in the car, in the house, or on foot. While it might not be the best tool in everything it does, it does give you the opportunity to buy one radio and use it almost anywhere. Now, if the radio is going to stay in the car all the time, yes, it should be a mobile rig. Otherwise, he should consider the HT.

I also became the program director (among other things) at the beginning of the year and had the same problem. Fortunately, our club has a long history of good programs and thus was able to draw on the experience of those that have "been there, done that!" One of the things that helped out a *lot* was to take a look at previous programs as well as a list of people who have done talks in the So. Cal. area. Let me know if you are interested in the list, and I can e-mail it to you.

As for ideas, interesting topics we have had and are working on include how cellular phone systems work, DXing software, emergency communications, GPS systems, Telsa, Repeater operations, Old Timers Night, vehicle tracking, and the list goes on. The most successful topics seem to be where the members can also get involved.

4681. Hyperlog Pro?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-10 00:00:00 UTC
From: eengel@eskimo.com
Message-ID: <D9zD3F.CF4@eskimo.com>

And to those who need to call helicopters to rescue them when their F-16
gets shot down in a combat zone! Did any of you "CW is obsolete" people
notice how all the media mentioned that Capt. O'Grady used CW to call the
helicopters that rescued him in Bosnia? It obviously still has its place,
and obviously someone is still teaching soldiers how to use it.

The problem with that attitude is that HF isn't a riding academy.
Morse is not the only form of locomotion available on HF, nor the
best for most uses. More to the point, however, is the strange
idea that a formal Morse test is required to be passed before you
are allowed to attempt to use Morse (or any other mode) on HF.
Seems to me the only useful test is whether you can communicate
on the air. If you can't, you won't, if you can, you might,
and no formal testing is required unless there is some problem
with untested people sending bad Code on the air in their attempts
to communicate using that mode. I haven't seen any evidence
of that being a serious problem in either of the only amateur
Morse exclusive band segments, 50.0-50.1 or 144.0-144.1. People
who haven't been Code tested have access to those segments, yet
there haven't been widespread complaints of bad Code being found
there. Any problem with Code transmission seems to be rather
self-limiting and not of a magnitude requiring formal testing.

Rather, it seems the continued insistence on formal testing is an
attempt by some in the amateur community at using the government
as a forced recruiting tool to a mode that they seem afraid can't
stand on its own merits in open competition with other suitable
communications methods. That's a pretty good functional definition
of an obsolete method, one that can no longer compete in the field
with other methods without artificial subsidy.

> power cords).
>
It is not necessary that the DC common circuit actually float. The
correct procedure is to connect DC common to the equipment ground
at only one point within any one machine. In PC type computers
there is usually done inside the power supply. In a properly
(read low noise) designed printed circuit board, the "ground" plane
is actually DC common, and should not be confused with earth ground.
In most IBM PC compatible motherboards, there is a mechanical mounting
stud near the keyboard connector that may be mistaken for a motherboard
grounding point - it is not = This mounting stud should have insulating
washers to keep it from grounding the DC common at that point. This
one item has cured many cases of mysterious behavior in PCs.

Again, the rule of thumb for grounding digital circuits is to connect
DC common to equipment ground at only one point within a machine, and
to be connect any signal cable shields to the equipment chassis at
only one end. I am aware that some terminal devices violate this
convention. My cynical response is that it helped them pass the
tests required to get it to market, but caused many service headaches
in the field, but my practical response says that there are always
exceptions to any convention - just be aware, and if you experience a
problem maybe you can identify the root cause a bit faster.

Please re-read Gary Coffman's earlier post on grounding. That is
something that could replace most of the words I have previously
read on grounding, and I checked the ARRL Handbooks section on
station grounding before placing my first post on this subject.
While it was somewhat informative, I found it woefully incomplete
in answering the all important WHY question that is so helpful
when the current conditions don't quite match the 'normal' and I
don't ever seem to encounter a totally 'normal' situation.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 JUNE AND FORECAST FOR 11 JUNE - 13 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 09 Jun
Daily Proton Fluence >1 MeV: 5.0E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 2.4E+08 (moderate)
X-ray background: A5.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
11 Jun 12 Jun 13 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 11 Jun: 84/26

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 09 Jun
Learmonth 5 2222 1111
Fredericksburg 10 6
Planetary 10 6

Observed Kp for 09 Jun: 2112 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
11 Jun 7 Quiet
12 Jun 20 Active
13 Jun 20 Active
COMMENT: IPS Geomagnetic Warning 16 was issued on 8 June and is
current for interval 12-13 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
10 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Jun normal normal normal
12 Jun normal fair poor
13 Jun normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
10 Jun 39 near to 20% above predicted monthly values.

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
11 Jun 30 About 10% above predicted monthly values
12 Jun 15 Near predicted monthly values
13 Jun 10 Near predicted monthly values
COMMENT: IPS HF Communications Warning 19 was issued on 9 June and is
current for interval 12-13 June. MUFs at Townsville were near to 15%
above predicted monthly values with spread F during local night. MUFs
at Hobart were near to 10% above predicted monthly values with spread
F during local night.

non-issue
>

I wrote the question "asking" about the control operator being
responsible - however if you had read the first note of the thread
you might find it had nothing to do woth being anal about part97.

Someone asked a question after being told that MOH over the patch was illegal - some answered him with incorrect information, talking about how "incidental music" was exempt - in fact, it is not exempt with ONE exception. Nobody ever suggested that anyone be prosecuted for anything.

The "control operator" question was meant to answer itself.

Worrying about nothing? In reality, yes. But when somebody asks, especially a new ham, about part 97 issue, don't you think the answer should be correct?

I am no veterenarian - but I am pretty sure this horse is now dead!

> hduff@humnet.westonia.com wrote:

HD> : No Fear...Most countries follow the guidelines set out by ITU.

JC> If the ITU regs were to abolish the requirement for knowledge of Morse
JC> code for operation below 30 MHz, what would be the likely outcome?

To eliminate the CW requirement *OR* something to replace it which
requires an investment of time and effort justify EARNing the privledge
could result in a lower level of competence in operators. Give 'em HF and
they could be causing contentious interference half way around the world
be it from ignorance or carelessness.

HD> : CW will be with us for many years to come. Anyone with high hopes of
HD> : the dropping of the CW requirement for HF privs. had better not hold
HD> : their breath.

JC> On what have you made this conclusion?

Just a hunch. Have your read page 6 in the June issue of The Canadian
Amateur ? "RAC backs CW requirement"....(the RAC being Canada's voice
in the ITC). New Zealand is the only country currently proposing the
dropping of the CW requirement. I beleive it will be quite a while
before we see the day it happens.

HD> : CW for HF !?...Small pain for large gain in my books !

JC> Other than knowledge gives the amateur access to the MF and HF frequency
JC> allocations, what gain does it give?

You could apply this rationale to the whole examination. What gain does
it give to most of which we are now appliance operators to know how a
transmitter works ? Can you just see Joe Basic attempting to fix his
TS-850S ? (BTW...I am a big homebrewer but make no claim to have built
a TS-850S clone from scratch. I happen to do my own repairs on my
commercial equipment but believe I am among few.)
It's the sense of EARNING the privledge to operate HF which is to gain Jim.
If that's all it takes, learn it then ditch it (like many HF ops do !).
It's not enough that the Foot-In-The-Door level of licence has been
simplified such that ANYONE can pass the BASIC exam with minimal
investment of study. The BASICees still cry the blues because they're
just as far away from getting on HF as they were before the licence
requirements were laxed. They still have to learn CW. I'm not a CW
nut...do away with it but by gosh...replace it with someting that
maintains a similar investment of time and effort to EARN the HF priv.

HD> : JUST DO (LEARN) IT !

JC> I have no problem with this sentiment if it fulfills the needs of the
JC> individual; otherwise, it is just coertion.

JC> 73 and live better digitally
JC> Jim

It's not a matter of fulfilling the individuals needs Jim, it's a matter
of fulfilling the requirments of the exam. Like I said, learn it then
ditch it if you don't think you're going to like CW operation. Simple as
that ! If you want to replace it with *something* that requires a
similar amount of vested time and effort to EARN the HF phone privledge
then that's okay with me. I just don't hear any suggestions as to what
this requirement might be. Making the exam any simpler wouldn't be
right. :(

And to get phylisophical;
Amateur Radio came about as a hobby for experimenters who enjoyed sharing
thier knowledge with other Hams worldwide. In the whirlwind of
technological advance, we now have several other 'techie' type hobby
avenues of which people can take which don't have to involve Ham Radio.
The drop in interest of Ham Radio which seemed to threaten the existance
of the hobby may be attributed to this. Then the big equiment
manufacturers rally the governments to lax the licencing requirements
so that THEY can have more sales and the hobby will thrive (the latter
being incidental). The net result is that Amateur Radio is becoming a
fraternity of non-technical appliance operators whos primary interest
is being able to use HF phone with store bought equipment.
Point in hand... We are losing the substance of what Ham Radio was all
about not only from the introduction of simpler entry-level licencing
but from the threat of the elimination of CW by people like yourself.
I'm a pretty adaptable person and all for changing with the times...I'm
not trying to hang on to Ham Radio's past but I am afraid that the sense
of EARNING one's licence is being replaced by capitalistic tendencies.
Face it, the whole world morally is going to shit. Things come too easy
and are not appreciated anymore. The wrong things are glamorized and
idolized. Easy come, easy go....I just hate to see it happening to
Amateur Radio :(

In respect with last year, the UK6MG-contest was a big success. All over Europe there was activity, even in countries which were beyond my (and a lot of fellow 50 MHz-addicts!) imagination. Besides the 'standard' Europeans here are some interesting stations I heard and worked:

heard only :-((
RV6HF in LN24
TZ6VV This station made very bad CW. We first believed that the was signing T76VV but after PA3GML worked him with great efforts everybody was flabbergasted that it had to be TZ6VV (Mali). This station seems to exist and has a QSL-manager in the States. Anyway, after PA3GML worked him, he disappeared from the band. This could be a first contact between TZ and PA on 50 MHz.
R3VHF LO16

worked:
5T6E in IL30 Mauretania is becoming a standard country, thanks to Eric :)
S0RASD in IL56
S07URE (IL56??) QSL via EA4URE
4X1IF in KM72 Also Ralph had his party last weekend. He was audible for hours via double hop Es into West Europe
HA8BE in KN06 (DXCC #112 for me)

and.. totally out of the blue:

3V8BB in JM?? (DXCC #113 for me) Three stations in Holland worked this station: PAoJMH (first 3V<>PA), PA3FYM and PE1OUC. After these QSO's, as far as we could ascertain, 3V8BB disappeared leaving a lot of other frustrated stations behind. The ones who didn't work 3V are now questioning the QSO's we made. A card to the managers of this existing 3V expedition will give the answer.

Unfortunately nothing was heard from D44BC on 50 MHz. It seems they worked ON4KST early in the morning of june 10th. Also 4K6D (LN40) was not reported.

Remco, PA3FYM

Not as far as I know. What used to be the Department of Communications,
and is now the Spectrum Management Division of Industry Canada does have a
dial up bbs, PACOM, accessable at 604-666-2981. First time callers get a
30 minute call limit, which is more than enough to download many of the
files, including all VE callsigns. The VE0 file seems blank this morning,
though.

Also kept on the system are Canada Gazette notices, RICs, RSSs, and TRCs.

Roger, when are you going to start implementing your ideas rather than
just talking about them? If you truly believe this is the correct course
of action, then get to work on it.

What is the name of your new coordinating body? Exactly how many people
are on your wait-list for freq pairs? Have you monitored *each* seemingly
vacant pair over a several month period to actually determine there is no
rptr? Have you contacted *each* rptr owner assigned to each seemingly unused
pair to determine the status of their rptr? What happens if you, as the new
coordinating body, assigns a pair that suddenly becomes active by a
SCRBBA assignee? Oops! Now what will you do? Your assignee has just
spent lots of money getting his machine running on that pair only to
discover the original assignee came back to life. Will you reimburse
your assignee? What happens if SCRBBA files suit against your assignee?

Aren't there some summer semester law classes you could be taking
instead of worrying about this? Ham radio is only a hobby, you know.

>you!

Here's one that's free: Each of the 24 time zones is of 15 degrees width, centered on a multiple of 15 degrees longitude (with some added peculiarities due to political boundries). Just divide the longitude of the city of interest by 15 and round off to determine the number of hours ahead or behind Greenwich. And don't use a calculator!

If you don't like dividing, then just determine which multiple of 15 degrees longitude your city of interest's longitude is closest to. That multiple is again the number of hours + or - of UTC. (Note that a time zone extends 7.5 degrees E and W of n*15 degrees).

Ohio/Penn DX Bulletin No. 210

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 210
BID: $OPDX.210
June 12, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, Japan DX News, N4VZ, N4AA & QRZ DX, K4CEF & Southeastern Cluster Group, KK6EK, KD8JN, DF4RD, DK8KW, F5JYD, G4BUE & DXNS, HP2CWB, ON1LVL, ON6QR, ON7SJ, PA3BIZ, PE1KNL, SP6TPM and DL9GOA & DXNL for the following DX information.

9H, MALTA. A large group of Dutch amateurs (from the Dutch Radio Amateur Society) will be active for their 8th DXpedition to 9H-land. Activity will be from June 22nd to July 4th, from the QTH of Sliema on the main island on the complete 5th floor and roof of "The Regent Hotel". For the 3rd time the group will be active on the satellites (mainly AO-13 and AO-10, MODE-B). The group plans to be active also on 160-2 meters (including the WARC bands). They will be monitoring 50.110, 50.120 and 144.300 for sporadic E openings. The list of operators is as follows with ther prospective callsigns: Fritz/PA0BEA/9H3IE, Frans/PA3CGX/9H3ID, Wim(Bill)/PA3BIZ/9H3ON, Frank/PE1KNL/9H3QH, Teun/PA0TPM/9H3TD, Anton/PA3CRA, Erik/PA3DES and Jo/PE1NWI. All QSLs via homecall or the QSL Bureau.

CONWAY REEF QSLS. A note from Mats, SM7PKK, says that the Conway Reef cards (3D2CT and 3D2CU) are currently being printed, and he will have some with him at the Ham-Radio Meeting in Germany on June 23rd. He will arrive home in Sweden on June 26th and immediately begin shipping out cards.

D2, ANGOLA. Valy, D2/YO3YX is a Romanian Army Officer with the United Nation Medical Corp in the Romanian Army Medical Unit. He will be in Luanda until the end of the year. He has been heard on 18150 kHz around 1508z and 21267 kHz around 1523z. QSL via YO3YU, PO Box 55-36, Bucharest, Romania.

EA8, GRAN CANARIA ISLAND. Jean-Pierre is active daily as EA8/ON6GP on 30 meters. Check around 0230, 0900 and 2230z. He will be there until June 23rd.

EX (ex-UM8), KYRGYZSTAN. Yuri, EX0A, reports that a station is very active as EX/V31YM. The operator (Yu) is active on 20-10 meters, CW, SSB, the WARC bands and via satellite (21/28 Mhz). Please QSL directly to: Wilhelm Schommer, P.O.Box 71, Speicher, 54658 Germany. Don't send QSL via homecall (V31YM).

GM, ST. KILDA ISLAND. This Scottish island has an IOTA of EU-059 and will be activated on the 25th of July as GB4KLD, mainly for WAB purposes (all 4 squares). No other info is availabe at the moment.

IOTA DXPEDITION (Attention "Prefix Hunters"). A group of hams from the Province of Colon (HP2) will activate two or three islands in the island group in the Province of Chiriqui (HP3) with the IOTA reference number of NA-071. The operators Jose/HP2CWB, Emilio/HP2DFU, Ricardo/HP2CTM and Guillermo/HP2DUI will be using special callsigns of 3F3C, H33C and HO3C, each on a different island. The planned days for this DXpedition are July 1st and the 2nd. They will be active on 80-10 meters including the WARC bands, but only on SSB. QSL direct to HP2CWB, Jose NG Lee, P.O. Box 728, Colon, Republic of Panama or via the HP QSL Bureau.

NA-067, HATTERAS ISLAND, NORTH CAROLINA. Randy, KD8JN, will be active from July 8-15th. He will be signing KD8JN/4 and will be operating 10-80 meters including the WARC bands using primarily SSB, but will give CW QSO's on request. Randy will be using an ICOM 751 into a vertical and also wire antennas.

NEW DX EDITOR. Chris Page, G4BUE, has just become the new editor of the Radio of Society Great Britain's (RSGB) DX News Sheet (DXNS). Chris has also informed OPDX that he will also be publishing a DX News Magazine (DXNM) each month, with the first edition due in July. OPDX would like to wish Chris good luck in his new role and publication.

OY, FAROE ISLANDS. A Belgian amateur radio team will go to the Faroe Islands EU-018 to activate a station during the next IOTA Contest. The team will be active the last week of July and the first week of August. During the IOTA Contest, which starts the 29th of July at 1200z and ends on the 30th of July at 1200z, the group will be able to use a special call sign of OY6A. The operation will be carried out with the help of the Faroes Amateur Club. They will operate in the Multi/Op class during the 24 hours of the contest and in both CW and Phone modes. Before and after the contest they will transmit from a portable station on several islands of the Faroes archipelago. You should mainly look for them near the IOTA frequencies. The operators will be N4XYA, ON4LZ, ON6QR and ON7PC. Claus, DK9FE, will also be active from July 10-27. He will operate mostly CW on 80-10 meters and the WARC bands (about 15 kHz from the band edge).

SEBORGA - "PREFIX CLARIFICATION". Holger, DK8KW, has faxed OPDX the following information: "There has been some confusion about the actual prefix allocation for the "Principality of Seborga" recently. After official talks with the ITU in Geneva on May 17, 1995, the Seborgian authorites applied for the unallocated prefix block T8A-T8Z. As the Principality of Seborga is not a member of the ITU yet, this application

has to be supported by a country which has full membership of this international organization.
Although it was expected, that the prefix allocation is effective May 19, 1995, processing of the application obviously takes longer due to administrarive reasons. Therefore, Paul, I1RBJ, who has activated the official station in the Prince's palace in Seborga as T88A has now temporarily suspended the operation until the situation is completely resolved.
To allow the continuation of the operation of guest operators on the territory of Seborga, it was decided that temporary licenses will be issued using the homecall followed by the callsign extension /1P until a new callsign system is in place. Application for visitor's licenses should be sent to: Direzione Generale Telecomunicazioni, Piazza San Martino, 1, SB-18012 Seborga, Principato di Seborga (via Italy).

T2, TUVALU. As this was being written, there were no QSNs reported on Masa, JE1DXC, as T20XC. But according to a fax from the "Japan DX News", T20XC will be QRV SOON. Masa has rearranged his T2 trip from June 7th to the 14th, due to aircraft repairs. He states his luggage will arrive on the 8th of June, so his operation may still be delayed. Masa still plans to operate on the high bands. Look for his 80 meters CW signal on the lower edge around 0600z and 0930z.

TM7I. F5JYD informs OPDX that the LOOS DX GANG will be active with TM7I callsign from some Normandy and Britany Islands for IOTA program & DIFM. QSL via F5JYD.

VI7DI, DEAL ISLAND 1996 DXPEDITION. An international team (Marek/VK3DO, Jurek/VK3OO, Barry/VK3XV, Tad/VK3UX, Mirek/VK3DXI, Jacek/VK5CJC, Wlodek/SP5DDJ, Ed/W6KCB, Jurek/4X6RM and some more) will organize a DXpedition to Deal Island in the Kent Group (IOTA OC-195) from February 8-15th in 1996. The callsign will be VI7DI. All contacts will be confirmed with a special QSL. The island is located at 147 55'E, 37 34'S some 45 miles from the Victoria state. On the island stands the highest lighthouse in Australia which is not active anymore. Operators will reach the island by very difficult waters of Bass Strait. There will be more information available at a later date.

VK9X, CHRISTMAS ISLAND. Ken, JA1CMD/AD4WF plans an operation from June 23-26th, as VK9XH. Activity will be on 80-10 meters (including the WARC bands), mainly CW with a TS-50 (50W) and Windom antenna. QSL to JA1CMD via JARL only or direct to AD4WF via 95 CBA.

XY0Y AND XY0Z UPDATE. Bob, KK6EK, announced that the DXpedition to Salas y Gomez (SyG), originally scheduled to be part of the expedition to Easter Island in September, will instead be carried out during October. This change is necessary due to a shift in the schedule of the Chilean Navy who provides the only available transportation.
There is no change in the EI expedition: it will be led by Bob KK6EK during September 2-23rd, and will sign XR0Y. The team is: KK6EK, K4UEE, XE1XA, AH9B, XE1L, WT8S, G0LMX, KE6QZZ, W4ETO, WJ2O, K0IR, HB9AEE, AA6TT, W3UM, PA0ERA, W8FMG, XE1CI, N1OCS, K9JSC, HB9AHL, W0ZV, plus 6 non-radio

persons.
The SyG expedition will be led by Carlos NP4IW during October 1-22nd, and will sign XR0Z. The trip will be by boat from Valpariso, Chile, directly to SyG, about 1 week on the island, and return to Valpariso. The team and gear will be helicoptered onto (and off) the island. SyG will count as Easter Island for DXCC, but will be a new IOTA. Bob reports there are still openings for 2 or 3 operators for the SyG DXpedition. Cost will be $1000 plus airfare. All equipment and services will be provided. The expedition is also interested in additional divers able to collect marine samples and document the wildlife on SyG. If interested, please contact Bob or Carlos at the following InterNet addreses:
Bob (KK6EK) - cordell@ccnet.com
Carlos (NP4IW) - carlos_george-nascimento@cc.chiron.com

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Yes there are a few open 440 repeaters in southern California. One is the N6ENV repeater on 447.025, PL-156.7. This is an open system for all to use--even those who do not contribute. The repeater is located on Loop Canyon above sylmar. It looks down into the San Fernando & Santa Clarita valleys. Enjoy!!!!

JA>>we say and do we would all be better off. If you don't want any
JA>This statement is only true when the particular right and particular
JA>responsibility(s) are both identified and logically confirmed as
JA>being co-dependent.

JA>What rights are you talking about?

JA>73,

JA>Jack
Some people talke about their right to free speech, or their right to drive, or their right to vote. Well, If you coose to exercise your right to free speech, you have the personal responsibility to be sure you don't slander someone. Or the responsibility to be sure you don't use choice phrases where children will see or hear them. If you drive, you have the responsibility to be sure you don't drink and drive, or drive like a maniac and kill someone.

I could go on all day about how just about every right has a responsibility attached to, but it just boils down to common scence. If you are smart enough to exercise your rights, you should be smart enough to live up to the responsibilities that come with those rights...

That's interesting. I found it OK when I ran BayComm for a while. If you want to get into something
really fun, you could try TCP/IP using JNOS or others. Several versions can use packet drivers for
the BayPac.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 JUNE AND FORECAST FOR 12 JUNE - 14 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 83/24

GOES satellite data for 10 Jun
Daily Proton Fluence >1 MeV: 3.8E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 4.2E+07 (normal)
X-ray background: A9.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 Jun 13 Jun 14 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 Jun: 82/23

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 10 Jun
Learmonth 4 2221 1111
Fredericksburg 8 10
Planetary 10 10

Observed Kp for 10 Jun: 3432 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
12 Jun 16 Unsettled to active
13 Jun 20 Active
14 Jun 10 Unsettled
COMMENT: IPS Geomagnetic Warning 16 was issued on 8 June and is
current for interval 12-13 June. A suspected recurrent disturbance
is possible for the next two days.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Jun normal fair poor
13 Jun normal fair poor
14 Jun normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
11 Jun 41 about 20% above predicted monthly values

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
12 Jun 15 Near predicted monthly values
13 Jun 15 Near predicted monthly values
14 Jun 20 Near predicted monthly values
COMMENT: IPS HF Communications Warning 19 was issued on 9 June and is
current for interval 12-13 June. MUFs at Townsville and Hobart were
about 10% above predicted monthly values with spread F during local
night.

LN>Not for me, thanks. I just don't see the point in wasting a bunch of time
LN>mastering something as obsolete as Morse Code. I'd rather spend my time
LN>learning something new.

Apparently Captain O'Grady's rescue gear implemented CW as one means of communications that might have led to his rescue from Bosnia. I wonder how he feels about implementing that "obsolete" mode as a means used in rescue work.

If you don't know something - sure it will be new to you - whether it has value - only you can decide. To categorically label something obsolete because you abhor it is not a valid argument in my opinion.

You might check your home owners policy. I have American Family auto and got a simular story .... hmmmmmm .... I was told that I had to have a writer to cover the gear.

So, in a huff, I called my Home owners (Shelter Insurance). Guess what, they covered it. :) Although it was an amount just enough to satisfy the deductable.

I have also been considering ARRL insurance. It is by far cheaper than the writer mentioned by American Family. Don't know how to compare it to Shelter, and I didn't ask them how they overlap the coverage so. Prudential home owners does something simular. Some years ago my daughter ran into a parked car with her bicycle. Some neighbor kids were playing with a basketball and got a bit carried away. She tried avoiding the ball and the car but the car won. Prudential covered the damage to the car ($270.00). The funny part was the bike wasn't hurt, but it sure creamed that electric mirror on the car.

I have had experience hamming from an apartment. I had to use a mobile rig plus power supply and a mobile antenna. I found that it worked well. I was able to hit a repeater forty miles a way. I know most people don't live in a rural setting, but the extra power of the mobile rig helped me out. Plus i was also able to use the rig in my car. Since all of the equipment was kept in my apartment I didn't have to worry about my car being broken into. I hope that this info is of help to anyone out there. Thanks Keith Sakatch (VE5KIS)

4733. NEED HELP! Respond������

WW> For this reason, barring an expenditure of many thousands of dollars
WW> to install protective measures, absolute protection means staying
WW> off the air during a lightning storm and disconnecting *all* leads
WW> to the equipment. There are no exceptions to this rule.

Staying off the air during thunderstorms is good advice, as well
as disconnecting all power and antenna connections to your
equipment. But this should not be taken to mean that the
antenna/tower grounding and AC power grounding wind up being
disconnected from each other.

As for a direct lightning strike of sufficient force, there is
little you can do short of spending a lot of money. I have
read that a direct strike can involve currents between
18,000 to 60,000 amperes. If you assume a 1 ohm resistance
for your tower, for example, you have a pulse of
18,000 to 60,000 volts--there's no solid state devices can
take that if even a small portion of that should appear between
AC ground and equipment ground.

Last summer I took a heavy strike to my tower. Unbeknownst to
me I had the ham equipment/antenna/tower ground separate from
AC ground (careless of me, not to have realized that).
The result was the ON/OFF power switch of my SB220 blasted
to smithereens (which limited the damage to the linear), and every
solid state device in the shack that was connected to the AC
ground and in the house (VCR, Stereo, 3 TV (including a 46"
projection TV), plus two antenna rotators, all out of action.

Fortunately, my home owner's insurance picked up a $4500 tab!

Interestingly, my TS-830 transceiver, whose antenna coax was
disconnected and power cord pulled, lived. (I had followed
some of your advice!).

I hope some of you have experienced my situation and can offer advice. I am considering purchasing a new home about 5 miles out in the country. The area is developed and has cable to all the residents. The only big drawback is the close proximity to a major powerline.

I can't tell the capacity of the lines but there are 5 major lines on three parallel poles.

I am far enough away to put up a 70' tower and not worry about falling on the lines BUT the big question is reception. What should be the effects of that power line? I'm not really asking about the line noise issue so much as the shielding effect created by the lines. Will I be cut off in the direction of the lines?

The lines are oriented pretty much North South and I am on the east side of the lines. One of my major concerns is 75M or 40M SSB as I want to be able to work my Dad who lives East of me.

Should I be concerned? I plan to go out with an AM radio to listen for line noise. If noise is high, no go on the house. I would appreciate any input on this subject.

Speak for yourself. You can build a much better repeater for $500 than you can buy for $2000, and it's not that difficult. (I've done it, and I'm certainly no radio guru.) In fact, there's a conversion file floating around the net that Jim wrote about making repeaters out of commonly available commercial radios.

Around here (before you say it, yes, I know this is Texas...), there are as many converted commercial radios as there are store-bought repeaters. The commercial radios generally work better.

On an aside about Illinois; the ham plates are the only service plate with a
charge. All of the others, like National Guard or Retired U.S. Military have
no charge. The lady at the Secretary of State's office in Belleville, IL
wondered why too.

>
>There is no difference between someone's home station and their repeater. It
>is still their station.

The difference here is home stations are not repeaters. Their purpose is to
extend the coverage of other stations.
No one is denying the fact that repeater owners have the right to control of
their equipment and to decide who can and can't use their equipment. This is
not the issue in question.

The problem is hams want more open repeaters to use. The problem starts when
someone with good intentions wants to put up a repeater and can't because
they can't get the coordinating body's blessings.

The problem is on 440 there are frequencies that are not being used or
sporadically used.

The problem is hams who want to use the 440 spectrum feel "locked out" of
the band because there are on crowded machines and see machines that are
not using the frequencies.

4741. Most popular bands?

I'm thinking about getting involved in amateur radio as a substitute for uninteresting CB traffic on commutes and trips (I'm sure the conversations will be a definite improvement). My question is: what kind of mobile radio should I buy? Handheld, mounted, 5W, 10W, 45W? And most importantly, what is the recommended frequency band for a newbie? My local radio shack seems to privilege 10m, but I hear 2m is very popular as well. What do you think? (Of course, I am studying for the Technician class exam...)

If you are going to get a NO CODE Tech license, forget about the 10 meter
radio, you won't have priviliges there anyway. Go with a 2 meter radio for
starters. As for the power and type of radio, that really depends on your
needs and intended usage.

I think most TV's today would react similarly if the TV antenna was INDOORS close to the transmitting 2 meter antenna. Even separate rooms is not much isolation in such a case.
Televisions have very poor IF selectivity and especially now in the solid state age very little in the way of selective tuned stages in the front end of the set. Getting the TV antenna out into a better receiving location is a good place to start. A quarter wave stub trap for 146 MHZ (approx. 12.75 inches of RG59) may help greatly with such a problem too. Put the trap with a tee inline between the antenna and the TV (not real likely with an indoor, I assume flat-line dipole).

```
[TV set]-----[coax tee]----------[coax going to TV antenna]

> Texas, Mr. Reese has concluded otherwise.

Gosh, I must have missed the part where "Mr. Reese" said something to
elicit such flammatory stuff. I'm glad I don't live in CA, 440/144
problems included among the reasons, but I'm curious as to what would
happen if SCRBBA were competitioned outa existence and a more
responsive council was set up in its place to make decisions on
spectrum management so that, as you suggest, the majority of the
channel pairs were made available to the majority of the "people",
i.e., users potential or actual.
I have worked on repeaters, remote bases, and linked systems commercially
and hamwise for 20 plus years. I am continually amazed at the average
ham's ability to underestimate the cost of the engineering, purchase,
installation, and continuing upkeep of such systems. I have seen ham
clubs decide $500 was TOO MUCH to send to support a local repeater for
a year's operation. That comes out to about 42 bucks a month for a
repeater that sits on a 10,000 foot mountain, is open to the public,
solar powered, and has an open autopatch. The autopatch causes most
of the grief for the sysops since if it refuses to respond the phones
start ringing madly with complaints and requests to get it back in
operation as soon as possible. Most of the complaints seem to come
from non-paying users of the system, which as "Mr. Reeves" states, is

a rather noticeable irritant also.
So, if you have an ideal spectrum management/coordination council, how do you ensure it does what YOU (or the majority) want it to do? How do you tell if it's doing its job? I myself have no use for "private" frequencies either. In the GMRS (General Mobile Radio Service) there is no coordination and licenses are issued from the FCC with the basic understanding that there are no recourses to channel usage conflicts other than working it out with each other. Is there some good reason hams should have it otherwise?
I guess my sentiments favor those running open machines should have first choice for the primo frequencies. Those wanting "private" systems (i.e., restricted membership) should be the ones to populate the "less desirable" bands such as 220 (which is a SUPERIOR band, btw, just not "popular"), 900, 1296, etc.
I have NO quarrel with closed repeaters that allow anyone access so long as they pay their share. "Club" repeaters seem to rise and fall with the talent and enthusiasm of the club leaders, that is, mostly fall in my limited experience. The political expedient of an "ideal" council would be to grant freqs to clubs and groups promising the most bang for the buck but how to enforce it once the machine is up and running? Almost anything I can think of merely results in more regulation and burrocracy (NOT misspelled). How about the "club" repeater that has occupied their sacred channel for 20 plus years and for the last 10 years has not been able to keep the machine usable and operational but refuses to consider relinquishing the channel?
I think the 440 problems in CA are largely due to the large number of hams. They will likely have different solutions to those problems than most of the rest of the country and probably not very palatable to many of us elsewhere.

Come on, Jonathan. A ground-plane can be constructed from coat hangers
soldered onto an SO-239, and any ham should be able to construct a
12 vdc power supply with a current rating high enough to power the
mobile rig on its low-power setting.

Attention Slow Scan TV Operators. If you would like your E-mail address posted on my homepage for other slow scanners to see, please drop me a note with your name and E-mail address. It will be posted on the following homepage <http://www.gate.net/~rlehman/>

Note: If we have already corresponded in the past, I have your E-mail address.

73,

Rick WB4EJC

Cute, Gary. How about thrilling us with a few more little debating
tactics you picked up in 5th grade. Or maybe you just want to fling a
big bugger at all those Morse-loving brain-dead wet-ware
modem-emulating deminerds out here. Come on. what's next?

Hi! I was wondering how much a small, inexpensive UHF radio would cost me. All I need is to have one frequency (453.350) and it doesn't have to be a powerful radio. I currently have a scanner but I'd like something a bit smaller, and more portable just so I can monitor that one frequency. That's the reason it doesn't have to be a powerful radio - just so long as it can recieve transmissions. I don't know too much about radios and stuff so if there are any other options you folks can think of, I'd appreciate them! Even something like a used Motorola Minitor II might do the job. I'd appreciate any advice I can get! Please respond via E-Mail at sachinp@execpc.com. Thanks in advance!!!

>The trustees agree to operate with some constraints. The membership of
>each group understands these constraints. This differs from the
>inefficient open repeater plan that allows anything and everything to deny
>a nearby close repeater share of the frequencies.

Sure that is the case here in CA. But the number of frequencies that are
assigned to open are few and groups wishing to put up a new repeater
can't because they can't get coordination. This is often blamed because
they don't belong to the good 'ole boys network.
>
>Tell me that a wide area open 2 meter repeater serves the community any
>better than several 440 closed repeater or remote base groups that all
>agree to share the frequency at the local level.

What does this have to do with coordination? Irrelavent to the arguement.

>
>Before you can even begin to change the rules of coordination in your
>area, you have to get the majority of repeater trustees as well as the
>users of the band to agree. This can work and is done all the time within
>the different coordinating areas.

Why do we have to get the blessings of the majority of the repeater
trustees? They are happy with the system currentely in place. The users
of 440 (new users) and groups wanting to put up a repeater on vacated
frequencies but are being ignored by SCRRBA are the ones that want the

change.

>I know the 220 coordinating group in southern california had to change
>its rules recently at the direction of the Commission. What general rules
>would you change to the 440 coordination structure in your area, that are
>now being applied on the other bands?

I'm not going to repost my suggestions. You will have to go back into the

I thought the young person did a good job. He researched the background, explained some of the activities, and his work seemed to indicate a general understanding of the basic concepts. Just one minor nit -- Technicians CAN operate in the 50.0 to 50.1 and 144.0 to 144.1 segments, even if they have not sat for the Morse exam. Not knowing the grade level of the student, I'm unable to assign a grade to the paper, but I'm assuming a middle school student, so I'd give a tentative "B".

Dear Anthony (and others),

Ham Log 3, the Ultimate Ham Radio Logging program,
is currently available at the following FTP sites
on the Internet. This is the functioning demonstration
version.

It has a special "Contest Mode" which is exceedingly
fast for logging QSOs. BRIEFLY - you enter the callsign, and
then a lightening fast check is done for dupes. (If any found,
all are listed with Date, Time, Mode, Band Report and more
in single line for each QSO). If no dupes, then the QSO is
immediately added and all you need to enter is the report
(cursur is placed in this field automatically) then press
PgDn and you are ready for the next QSO. (All other QSO fields
Ham Log looks after itself, or you can have pre-set them with
default entries.) The program itself is EXCEEDINGLY FAST in
all of its functions. Runs under Windows, but to be such a
fast program it runs best from DOS (fine under DesqView).

oak.oakland.edu - /pub/hamradio/pc/logging
hamlog3.zip is the only file available
ftp.une.edu.au - /pub/ham-radio/ham-loggers
ham_log3.zip; ham_log3.txt; ham_log3.diz
3 files available.
-
/pub/ham-radio/funet/ham/hf-work
hamlog3.zip
ftp.funet.fi - in directory /pub/ham/hf-work
hamlog3.zip

It's not? Why then, when I tune the dial around do I hear so much amtor, packet, and SSB voice, moreso than CW? According to Webster, obsolete means "of a kind or style no longer current: OLD-FASHIONED." Is CW not this way? Why am I so OBVIOUSLY wrong?

Common sense is not always common, nor does it always make sense. If you do not question it at one time or another, then how do you know? (If it really is common sense, then your questioning will be quickly answered.)

>KC6FYL
>steven.rosenberg@support.com

All excellent questions. The answer is not easy to know, with respect to haw many are **NEVER** used. However, as far as how many are **almost** never used, there are a heckuva lot. 440 is distinguished by its lack of use. I know of numerous pairs that should be readable from my QTH which I have never heard transmissions from. Eventually we're going to put an automated scanner on them, and document systematically which ones are used how much, etc. The difficulty with 440 of course is that the range makes this tough to do at one time.

With respect to coordinating more than one pair, hard to tell. SCRBBA doesn't seem to do it much. We wrote them about it once, and they never replied.

Good questions though.

I'm touched by your concern for my welfare, Jeff. Thanks. In our brave new world of the late 20th century, it is truly comforting to know that there are people like you who are concerned for the welfare of total strangers.

In answer to your query, nope, no summer classes. I'm logging in about 50 hours a week on a research job.

Hope that's OK with you. USC doesn't offer summer law classes. Their theory is that 9 months of law classes calls for a break in the summer.

: HD> : No Fear...Most countries follow the guidelines set out by ITU.

: JC> If the ITU regs were to abolish the requirement for knowledge of Morse
: JC> code for operation below 30 MHz, what would be the likely outcome?

: To eliminate the CW requirement *OR* something to replace it which
: requires an investment of time and effort justify EARNing the privledge
: could result in a lower level of competence in operators. Give 'em HF and
: they could be causing contentious interference half way around the world
: be it from ignorance or carelessness.

What is the the means by which Morse code prevents or avoids this
prediliction for causing interference or carelessness? There is none.
Thus your assertion is unsubstantiated.

: HD> : CW will be with us for many years to come. Anyone with high hopes of
: HD> : the dropping of the CW requirement for HF privs. had better not hold
: HD> : their breath.

: JC> On what have you made this conclusion?

: Just a hunch.

Why am I not surprised.

: Have your read page 6 in the June issue of The Canadian
: Amateur ? "RAC backs CW requirement"....(the RAC being Canada's voice
: in the ITC).

Yes.

: New Zealand is the only country currently proposing the
: dropping of the CW requirement. I beleive it will be quite a while
: before we see the day it happens.

New Zealand is the only country to publish its stated position at this
point in time. This does not mean that it will be the only nation to do so.

: HD> : CW for HF !?...Small pain for large gain in my
books !

: JC> Other than knowledge gives the amateur access to the MF and HF frequency
: JC> allocations, what gain does it give?

: You could apply this rationale to the whole examination.

No, I disagree with with this notion entirely.

: What gain does
: it give to most of which we are now appliance operators to know how a
: transmitter works ? Can you just see Joe Basic attempting to fix his
: TS-850S ? (BTW...I am a big homebrewer but make no claim to have built
: a TS-850S clone from scratch. I happen to do my own repairs on my
: commercial equipment but believe I am among few.)

The purpose of the technical portion of the examination is to ensure that the amateur is aware and can take steps to avoid interference. The government has no abiding interest whether indeed amateurs build or repair their equipment. As you know, the Basic qualification forbids the building of "home brew" transmitting equipment; the use of that equipment is permitted only to those who hold the Advanced qualification. However, those who hold that qualification are not force to home brew their equipment - the examinations only provide a means by which the government is sure that the amateur in question has enough knowledge so that he does not wreck havoc with his immediate neighbours in physical proximity nor his neighbours on the radio frequency spectrum if the home brewing option is exercised.

In summation, to argue the need for technical examination in the same terms for the need for Morse code on the MF/HF amateur allocations is perverse.

: It's the sense of EARNING the privledge to operate HF which is to gain Jim.
: If that's all it takes, learn it then ditch it (like many HF ops do !).
: It's not enough that the Foot-In-The-Door level of licence has been
: simplified such that ANYONE can pass the BASIC exam with minimal
: investment of study. The BASICees still cry the blues because they're
: just as far away from getting on HF as they were before the licence
: requirements were laxed. They still have to learn CW. I'm not a CW
: nut...do away with it but by gosh...replace it with someting that
: maintains a similar investment of time and effort to EARN the HF priv.

I agree, earning the priviledge is important. However, erecting barriers which is not commensurate to priviledges is abusive to those trying to earn that priviledges. As I pointed out earlier, Morse code does not prevent interference half way around the world. Similarly, to advocate that one should learn a skill just for the sake of learning that skill is wasteful of both time and resources that could be use more productively to earn the right to operate in those amateur allocations.

: HD> : JUST DO (LEARN) IT !

: JC> I have no problem with this sentiment if it fulfills the needs of the
: JC> individual; otherwise, it is just coertion.

: JC> 73 and live better digitally
: JC> Jim

: It's not a matter of fulfilling the individuals needs Jim, it's a matter
: of fulfilling the requirments of the exam.

I agree, one must pass the exam in order to show competence. However, if the examination is asking questions, or demands demonstration of skills that are irrelevant, obsolescent, or do not achieve the intended objectives, then it must be changed.

: Like I said, learn it then
: ditch it if you don't think you're going to like CW operation. Simple as
: that !

But for what end? This philosophy would justify any sort of government imposition of unrelated skills with respect to activity in quesiton. Want to drive a car? Well, you have to show us that you can make a buggy whip - you never know it might come in handy to beat your engine while stalled on the highway. You want to be a doctor? You have to show use that you know how to make paper from rags; otherwise, you will be unable to prescribe any drugs if you happen to run out of prescription pads. In the first example, beating a car engine makes no sense - you might feel good, but it doesn't get the thing running again. In the second example, the prospective doctor could have spent his/her time more productively studying the pharmacopeadia, and in the future, ensuring that they have an adequate supply of prescription pads, rather than ensuring that they can make their own. Now, if the doctor wishes to know how to make paper for the purposes of making his/her own prescription pads, go right ahead. However, it would be unjustifiable to make it a skills test in order to be a licensed physician.

: If you want to replace it with *something* that requires a
: similar amount of vested time and effort to EARN the HF phone privledge
: then that's okay with me. I just don't hear any suggestions as to what
: this requirement might be. Making the exam any simpler wouldn't be
: right. :(

If in fact the present technical examination does fulfill its objectives in the mitigation interference, making it "harder" as a replacement to the Morse code examination makes no sense either.

: And to get phylisophical;
: Amateur Radio came about as a hobby for experimenters who enjoyed sharing
: thier knowledge with other Hams worldwide. In the whirlwind of
: technological advance, we now have several other 'techie' type hobby
: avenues of which people can take which don't have to involve Ham Radio.

Nor have to know the Morse code (I couldn't help it hi hi)

: The drop in interest of Ham Radio which seemed to threaten the existance
: of the hobby may be attributed to this. Then the big equiment
: manufacturers rally the governments to lax the licencing requirements
: so that THEY can have more sales and the hobby will thrive (the latter
: being incidental).

Balderdash. Where's your proof? Save yourself some energy, you won't find it because there is none.

: The net result is that Amateur Radio is becoming a
: fraternity of non-technical appliance operators whos primary interest
: is being able to use HF phone with store bought equipment.

So what? That has occurred despite the changes to the examination process, changing it is not going to get us back to the "good old days".

: Point in hand... We are losing the substance of what Ham Radio was all
: about not only from the introduction of simpler entry-level licencing
: but from the threat of the elimination of CW by people like yourself.

Boy, I never realized that my advocacy of the discontinuation of CW testing would have such an effect. (I wonder what I gotta do in order to part the Red Sea?)

Hardly. The state of amateur radio today had more to do with the advances of technology than it did with my advocacy of dropping CW testing.

: I'm a pretty adaptable person and all for changing with the times...I'm
: not trying to hang on to Ham Radio's past but I am afraid that the sense
: of EARNING one's licence is being replaced by capitalistic tendencies.

Verily I say unto thee - prove it.

: Face it, the whole world morally is going to shit. Things come too easy
: and are not appreciated anymore. The wrong things are glamorized and
: idolized. Easy come, easy go....I just hate to see it happening to
: Amateur Radio :(

If that is your view of the world, you are entitled to it, thank heavens it is not mine.

4777. Web Site Latest Callsigns

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-12 00:00:00 UTC
From: jjmartin@world.std.com
Message-ID: <DA2CyM.Gt2@world.std.com>
Source record: 244758

I have received a couple of messages asking where I get the information for posting the 1st call area latest callsigns. Also, hams from other call areas are asking about callsigns in their respective call areas.

I only post the first call area because A. That is the call area I live in and the one I am interested in. B. It takes a little effort to extract the latest callsign from the database. You have to hunt for it, of course it helps to know approximately where the FCC is in issuing callsigns for your area.

The web site is....Drum roll please.....(sound of drumming)

http://www.ualr.edu/doc/hamualr/callsign.html

Hope you find what you are looking for. I think the ARRL's publishing of latest callsigns is a little obsolete now. I mean by the time you receive your QST the callsigns were the latest issued for the previous month or more ago. Via the web the latest callsign issued is usally less than a week old and you can normally see them the day after they are issued depending on when you look.

While you're looking you might want to check out Ham Radio Outlet on the web. http://www.hamradio.com You can link to the callsign server from there as well and link to other ham related sites.

Many of HRO's catalog items are listed and using the search engine you can pretty much find ALL of HRO's products on the web....pricing too.

As usual, the media got it wrong. They're now finally beginning to
get it straight. For several days, the only signals coming out of
the crash area were automatic locator beeps from the seat radio.
O'Grady was afraid to transmit because of fear of detection. He
is quoted as saying, "I was a frightened little bunny rabbit, and
spent most of the time face down in the dirt afraid someone would
see me." Finally, on the evening of the fifth day, he got bold enough,
or hungry enough (he was trying to eat grass and ants), to use his UHF
voice radio to contact one of his squadron mates flying patrol in
another F16. He quickly established his identity and location. He
was about a mile and a half from the location where the beeps were
originating. The next morning, the Marines came in and rescued him.
Morse Code apparently played no part in his rescue.

The initial media confusion was probably because they assumed that
any beeping noise must be Morse Code. At least that's the story
printed Sunday in the Atlanta Journal Constitution.

Interference just with Ch4 is pretty damning evidence of a 20 meter station with a strong 5th harmonic, probably due to an overdriven external amplifier. If a local FM station on 98.5 MHz is also getting interference, that would clinch it for sure. Fundamental overload should get most, if not all, of the lower VHF TV channels, not just one.

Kitsap County, Washington will be conducting an amateur radio special event on board the USS MISSOURI on September 1st, 2nd
and 3rd, 1995. This event will commemorate the 50th anniversay of the signing of the documents ending World War II, and will be
conducted on board the USS MISSOURI moored at Puget Sound Naval Shipyard in Bremerton, Washington. The call sign for this
special event will be identified with the special call sign of WW2END.

I will continue to post information about this historic event in this news group.

Dural Report

Dural Report

Here again is a report on the various activities at the Dural broadcast station VK2WI.

The new 10m FM service, on 29.120 MHz simplex, is now a permanent feature, and again we would like to thank Peter VK2EMU for providing the transceiver and Bob VK2DOG for supplying the antenna.

We will shortly be providing a direct service on the 17m band, on 18.120 MHz. This used to be a relay conducted by Graham VK2DIG, but following a change of location this "1812 Overture" as he called it could no longer be run. Peter VK2EMU has provided us with yet another transceiver, and this service will soon return.

Some maintenance was performed on the 160m transmitter, and it is no longer dropping out as much as it used to. Some more work still needs to be done, so those taking bets on when next it disappears should be settling their debts soon.

The old voice mailbox service has not been updated for quite a long time, and now appears to have been removed. A replacement service is being sought once again. In the meantime, Divisional news still appears on the packet radio network (when not censored) and on the Internet. Speaking of the Internet, the NSW Division of the WIA can now be contacted as "wiansw@sydney.dialix.oz.au". As is usual for this Division, this would appear to be a "first" in the country, and like WICEN if there is interest in a Web page then this can be arranged.

Finally, listeners may be aware of the International Beacon Project on 14.100 MHz (when it's not being jammed by packet radio stations). This network, based on carefully synchronised transmitters, is being expanded to other bands, and this Division is negotiating to set up such a beacon here at Dural.

-- Dave VK2KFU, Dural Engineer

Magazine Roundup

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we

discuss the June issues of the various magazines.

"Electronics Australia" continues its series on using a scope for vehicle fault-finding; a big-screen 3D television, developed by an Australian firm and not requiring special glasses, is mentioned; an historical item covers a Sydney landmark, A.C.E. Radio; the "Forum" column is likely to prove embarrassing to some and entertaining to others when it reviews the complaint letters sent in by Amateurs; a kit to enable a parallel port to be interfaced to the real world is described; Amateurs interested in conserving energy can build a fluorescent lamp inverter capable of driving the new "energy saver" lamps; the intellectuals amongst us can pit their skills against a chess-playing computer the size of a matchbox; beginners can see how transistors can be used in some simple circuits; and those who work with the 68705K1 microcontroller can build a simple programmer for it.

"Silicon Chip" continues with the construction of a satellite receiver; beginners can build a simple audio amplifier and a digital multimeter; those with an old green screen monitor can put it to work in a low cost video surveillance system; and a multi-channel remote control transmitter is introduced.

"Amateur Radio" describes an interesting "coaxial travelling wave" multi-band HF antenna; the VK5BR audio filter is modified to include an adjustable rejection band; "Novice Notes" makes a return, and outlines the principles of receivers; the "T-Match" antenna tuner is discussed, as are whether trapped tri-banders are as good as they are made out to be; an SWR bridge for UHF and beyond is described, as is a "Linear dB S" meter circuit; techniques for determining the inductance of a toroid and the output impedance of the receiver audio stage are explained; and a crystal harmonic RF signal generator, suitable for use with repeaters, is concluded.

"Amateur Radio Action", in its final issue, publicises a society dedicated to removing the Morse Code requirement; a satellite antenna, the "Volute", is described; the future, if any, of Amateur radio is discussed; a 2400 bps modification for the TNC described recently is built, although it is incompatible with the existing standard; the Federal Office of the WIA defends its actions over the fee rises; a device to measure RF current in radials is made from a clothes peg; and the early history of radar is discussed.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

QRP Contest

QRP Weekend 1995
Contest Rules

Contest sponsored by the CW Operators' QRP Club Inc.
c/o Kevin Zietz, VK5AKZ, 41 Tobruk Ave, St Marys, SA 5042

1. Date: Saturday /Sunday 17th/18th June 1995.

2. Time: 0000 UTC Saturday to 0800 UTC Sunday.

3. Area: VK, ZL, P29 Call Areas

4. Frequencies: All normally recognized CW sections of
80/40/20/15/10 metre bands.

5. Band Usage: In order to spread interest and to reduce
possible congestion, stations are asked to distribute their
calling across bands using this guide:

On hour = All bands Hour + 15 mins. = 40 metres
Hour + 30 mins. = 20 metres Hour + 45 mins. = 15/10 metres
Stations should preferably call on recognized QRP Calling
frequencies (1.815, 3.530, 7.030, 14.060, 21.060 & 28.060 MHz),
then QSY to a working frequency.

6. Contact information: Contacts are to be logged with RST plus a
3 digit number commencing with 001 and incrementing by one digit
for each contact.

7. Repeat contacts: In order to make greater use of available band
space and time, repeat contacts with the same station will be
allowed with a minimum of three (3) hours between subsequent
contacts.

8. Scoring:
Contact with NON-DX stations - score 1 point for QRO station
- score 5 points for QRP station
Contact with DX stations - score 10 points for QRO station
- score 20 points for QRP station
Note: For this contest the definition of "DX" is any station
outside the VK, ZL and P29 Call Areas.

9. Certificates will be awarded to the first three placegetters
overall and to the highest scores in each of New Zealand, the
Australian States and Papua/New Guinea.

10. General:
Any station claiming to operate QRP MUST NOT exceed a maximum
of 5 watts carrie power to the antenna and should sign with the
/QRP suffix.
Logs showing conatcts and points claimed should be sent to:-
Ron Everingham VK4EV
30 Hunter Street, EVERTON PARK, Queensland, 4053 Australia
not later than 18th Juky 1995.

IPS Report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(2 JUNE - 8 JUNE)

1. SUMMARY (02 JUNE - 08 JUNE)

Date 02 03 04 05 06 07 08
10cm 73 75 79 82 79 82 84
A 19 18 9 9 9 9 (7)
T 4 8 13 18 32 31 31

SOLAR ACTIVITY WAS LOW ON 6TH JUNE AND VERY LOW FOR THE THE REMAINDER OF THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS UNSETTLED JUNE 2ND AND 3RD AND QUIET THROUGHOUT THE REST OF THE WEEK.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE SLIGHTLY BELOW PREDICTED MONTHLY VALUES ON 2ND, NEAR PREDICTED MONTHLY VALUES 3RD TO 5TH, THEN INCREASED TO 10 PER CENT ABOVE ON 6TH AND 8TH JUNE, AND 15 PER CENT INCREASED ON 7TH.

2. FORECAST (09 JUNE - 15 JUNE)

SOLAR: 09-12 JUNE : LOW
13-15 JUNE : VERY LOW

GEOMAGNETIC: 09-11 JUNE : QUIET
12-13 JUNE : ACTIVE T MINOR STORM
14-15 JUNE : QUIET TO UNSETTLED

IONOSPHERIC: NEAR PREDICTED MONTHLY LEVELS TO SLIGHTLY ENHANCED.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

News briefs

THE WIA NOW "SURFS THE NET"

Listeners who have access to Internet can now contact the New South Wales Division of the Wireless Institute of Australia. The NSW Division has arranged Internet access for the benefit of the growing number of WIA members and other radio enthusiasts who "surf the Internet". Our Internet address is:

wiansw@sydney.dialix.oz.au

N.B. This will not be available until 19th June

--Tony Liolio VK2ZLT, who organised net access for the Division

****

AN EXTRA 150KHZ FOR SIX METRE USERS

The proposal made up by Geoff VK3AMK, FTAC and VK3OT has been written into law this week and appears in the TLC's and Government Gazette.

Effective forthwith, 50.000 to 50.300 MHz is allowed for East Coast Amateurs. The extra 50.000 to 50.050 MHz was proposed to allow beacon breathing space and compatibility with overseas EME (moon bounce) operators. The 50.200 to 50.300 MHz expansion was requested to allow relief of congestion in the International DX allocation.

Now it is possible to have a Domestic allocation 50.2 to 50.3 like in Japan and the USA and an International segment free from local QRM.

--Steven Gregory VK3OT

WARNING: PKZIP 3.0 IS A TROJAN HORSE

Users of the popular file compression program, PKZIP, should be aware that a "Trojan Horse" version of the program is currently on the loose. If you run the program, it will try to erase your hard disk drive.

The file is named PKZ300B.EXE, or PKZ300B.ZIP. The support staff at PKWARE Inc. Advise that this claimed version 3.0 of PKZIP is a phoney: the latest official version of PKZIP is 2.04G. If you see either PKZ300B.EXE or PKZ300B.ZIP on your friendly local bulletin board, please advise the sysop to remove it immediately.

SAREX STS-70 POSTPONED

Space Shuttle Mission STS-70, which is scheduled to carry the Shuttle Amateur Radio EXperiment, has been postponed. Mission managers have decided to repair damage done by woodpeckers in the foam insulation of the external fuel tank. The foam prevents ice from building up on the tank. The repairs will be done at the shuttle Vehicle Assembly Building, requiring the Space Shuttle Discovery to be removed from the launch pad during the week. The mission may be rescheduled for sometime in August.

Mission STS-71, which will also carry the Shuttle Amateur Radio EXperiment, is still scheduled for no earlier than June 22. Following a Flight Readiness Review last Friday, mission managers decided not to select an official launch date due to ongoing work aboard the Russian Mir Space Station that needs to be completed prior to the Space Shuttle Atlantis' rendezvous and docking. The launch team at the Kennedy Space Center will continue vehicle processing work so that Atlantis will be ready for launch anytime on or after June 22. An official launch date is expected to be announced in about one week.

Thanks to SAREX Working Group member Matthew Bordelon, KC5BTL, at NASA Johnson Space Center and the Kennedy Space Center Public Affairs Office for the preceding information. For more information about SAREX, contact the American Radio Relay League's Educational Activities Department.

NEWS BRIEFS

The Sydney Morning Herald reported this week on the rescue of American fighter pilot Scott O'Grady, who was shot down over near Bihac in Bosnia. Captain O'Grady used his Air Force survival skills to evade capture for six days and nights, switching his emergency positioning beacon on and off to avoid detection by Serbian forces. At night, he walked 30km to cross-country, to an alternative site from where he used Morse code to contact US forces, who rescued him on Thursday morning last week.

We wonder: is Morse is still part of US Air Force training, or perhaps Captain O'Grady is an Amateur?

****

A new wireless telephone system will be introduced in Japan next month, and will become available in Australia next year. The PHS (Personal Handyphone System) will use local "cell stations" having a range of about 300m (as distinct from several kilometres in conventional cellular phone systems). Users will carry a light weight handset that will talk to nearby cell stations linked directly into the conventional telephone system.

The advantages of the system are lower phone charges (about a quarter the cost of cellular calls), and smaller, lighter and cheaper handsets, costing only about $50. The phones use a 32k bit/sec channel, which can be used for voice or data. The Personal Handyphone System was developed by the Japanese Government-funded Research and Development Centre for Radio Systems.

Competitive systems have also been developed in Europe and the United States. PHS was unvieled to AUSTEL, the SMA, and tele-communications industry representatives at a seminar in Melbourne two weeks ago.

VK2 WICEN News

VK2 WICEN News

There are a couple of changes to the calendar; the Blue Mountains net, conducted by Alan VK2YYJ, is now weekly, each Monday night at 8.30pm on channel 7175 simplex; and Hunter are running a training camp on the weekend of 7-8th October at Crangen Bay, Lake Macquarie; all regions are invited, and further details can be

obtained from Pauline VK2GTB on (049) 49-8786, or Frank VK2XVJ at VK2KLW.

This month is quite active; the Management Committee meeting is next Saturday; the Hunter meeting is on 19th June; and there are at least three events on Sunday 25th June -- the Waratah 100 Horse Enduro run by Andy VK2XRX, the Lake Macquarie Half Marathon run by Steve VK2KBL, and the Elouera Half- and Mini-Marathons run by David Shaw VK2TIP, who is also running the City to Surf race later on in the year. David needs a lot more people for these marathons, and he can be contacted at home on (02) 588-5061 or at work on (02) 588-5100.

Those members who have not yet renewed must do so by 30th June, if they wish to remain a member. For just $10 (plus a joining fee) you can be a member of the only Amateur Radio organisation accredited by the State Government to take part in a disaster situation.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275. If members are interested in re-activating the State-wide HF net then the Management Committee would be pleased to hear about it.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Club news: Waverley

The next meeting of the Waverley Amateur Radio Society will be on Wednesday 21st of June at the Clubroom in the Rose bay Scout Hall in Vickery Avenue, Rose Bay behind the Rose Bay RSL. The meeting will commence at 7.30 pm. The lecturer will be announced in next week's broadcast.

On Sunday June 25th the Club will be holding a Boot sale at the same location. Sellers will be charged $5.00 each, buyers get in free. Also a limited number of tables will be available for an additional fee of $5.00.

It is also planned to have a Sausage Sizzle in conjunction with the Boot Sale so come along and sell or buy some pre-loved equipment and enjoy a bit of a chat as well. Sellers will be allowed in from 11.00 am to set up their wares with buyers admitted from 12.00 pm. We look forward to seeing plenty of people there.

The next scheduled exams to be held by the club will be on Saturday 8th July and applications close on 30th June. Contact Grant VK2TU on 319-1913 or Eric VK2KUR on 337-2909 for applications forms.

Submitted by Eric van der Weyer VK2KUR

Club news: Liverpool

The Liverpool and Districts Amateur Radio Club Inc. holds their next meeting on Wednesday 14th of June at 7.30 pm.

Guest speaker will be Wayne Simpson VK2WJS on the topic of Power Supplies, the homebuilt variety. A topic near and dear to everyone's shacks!

Next month we will be holding an auction. Details will be announced in future broadcasts.

Remember: Wednesday night for the meeting to be held at the Scout Camp, Cambridge Avenue Glenfield.

See you there.

Bras VK2QQ
Publicity Officer

Club news: Newcastle

You are invited to a meeting of the Newcastle & District Packet Radio Group on the 22nd June 1995 at 7.30 pm at the University of Newcastle room 825 of the McMullin building.

A representative from the S.M.A. will give us an informative lecture on interference and other facets of their work. Also David VK2XPX will give a talk on TCP/IP and Geoff VK2EO will tell us what's happening in the FBB BBS world.

There will also be discussion on the future of packet in this area with developments, and also what is planned for the future.

David Moore VK2BDM

Club news: SPARC

The next meeting of the Sydney Progressive Amateur Radio Club

SPARC

will be held on Wednesday the 14th June at 7.30 pm at the club rooms. These are located at Middlemiss Street, Milsons Point, in the first arch below the railway line (the State Emergtency Services headquarters for North Sydney) and immediately to the north of Lavendar Street.

Our guest speaker will be micro-computer industry authority and President of the Australasian Micro-computer Users Society (AMUS),

Mr J Rigby, who will be discussing recent developments in micro-computing. Included will be observations on the "Internet" and multi-media. As those who have heard John talk on a previous occasion will anticipate, we can expect a very lively discussion - not to be missed.

Refreshments are avvailable and all are welcome.

Peter R. Jensen VK2AQJ
President

Club news: CCARC

The Central Coast Amateur Radio Club will be holding their AGM this coming Friday 16th June at the Clubrooms in Dandaloo Street Kariong. Written nominations for Committee must be received by the Secretary no later than next Tuesday 13th June.

The meeting will commence at 8pm and all members are urged to attend or to appoint a proxy. Tea and coffee will be provided after the meeting.

from Bob Fitzgerald, VK2XRF
CCARC Publicity Officer

Club news: Westlakes

Westlakes Amateur Radio Club will hold a "Morse Code Spectacular" day at the club rooms in York Street Teralba on Saturday 24th June, starting at 11 am.

Highlights of the day include: demonstration of vintage spark equipment and Post Office telegraph gear which will be used to send free telegrams on the day, over the club's telegraph line.

Morse keys, paddles, bugs, jiggers, competitions, prizes - it will all be there - including the largest collection of morse equipment ever assembled in one place.

Dine from our barbecue - free tea and coffee - all welcome - trash and treasure buyers and sellers are invited.

There will be an auction of surplus club gear at 2pm. Don't forget, the "Morse Code Spectacular" day at Westlakes - Saturday, 24th June, 11 am.

from Greg VK2CW

In article <3ra9oh$2g5@jupiter.NordWest.POP.DE> Peter Lemken <plemken@mail.hb.provi.de> writes:

>To me, operating has always been more fun than developping a new technical
>gadget, apart from the fact that my education was a little on the light
>side, when it comes to electronics. Does this make me a second class
>amateur? I don't think so.

Neither do I. I certainly don't believe that the entry level written exam should require drastically more technical topics than it already does; I think the operational side could be beefed up a bit, introducing topics like band plans and where one might find out about them.

>
>I think the entire discussion pro and contra CW misses one important point:
>If we consider CW as not essential for the access to shortwave bands, why
>don't we dispose of other parts of the exam, too? For instance: Why should
>I know anything about satellite operation? I never intend to use a
>satellite.

Well, I think we could agree that if the satellite questions on the exam (only on Extra anyway, I think) were so tough that for many, over 50% of the time preparing for the exam was spent on studying satellite ops, and if missing the satellite questions flunked one even if the rest of the test was aced, then satellite operation would be definitely over-emphasized on the test. That's the situation we have with CW.

>
>Hmm, we can think this idea one step further: Eliminate all different
>license classes, create a new one called "SuperExtra" with all full
>privileges. Application for this license will be done by a questionnaire
>that contains questions about what special topics in ham radio you would
>want to be examined, and which parts of ham radio you don't like or are not
>interested.

This isn't a completely dumb idea; one can imagine a test structured in "modules", each with a particular point value. There's a core module of regulations and safety information that every ham must take and pass; beyond that one collects points by passing other modules, and increasing point totals grant higher levels of license. (The similarity to the Scouts' merit badge system is striking.) However, relating such a system to a coherent set of privileges is daunting, and every time I think about it I decide it's just too complicated a system to embed in government regulation. My belief currently is there should be only two classes of license, entry and general;

any further recognition of advancement should be done by non-governmental organizations. One of the reasons I think the CW-for-HF requirement is bad is that it stands in the way of such a simplification.

>Once you have achieved this, you will
>be confronted with all the CBers calling for full access on the bands
>without exams,

1. Nobody's calling for the abolishing of all exams. Claiming that getting rid of the CW requirement is the beginning of that is the classic "slippery slope" fallacy.

2. That horde of screaming CBers doesn't exist anymore, the fad faded out years ago.

>body being formed, SECRET. There were supposed to be petitions available
>at the ham swapmeets, but I didn't see one at the Inland Empire Swapmeet
>at Fontana yesterday.

I was hanging around space G-something at the TRW swapmeet to see if anyone would come by and sign the "petition".

At about 8:30 - 90 minutes or so after the swapmeet gets going - one person did stop by to sign. Problem was, there wasn't a petition. The person behind the table of goods suggested that if the guy who wanted to sign would fill out a 3x5 card, put his name and callsign on it, and state in a sentence or two why he wanted SCRRBA thrown out, all such cards would be collected and forwarded - I didn't quite catch where or to whom.

The other man behind the table of goods said something like "no, that's not how you do it. You have to have a petition, with a stated position on it that people can sign on to."

I didn't recognize any of the three people involved and don't know who they were.

By this time, I was laughing so hard I had to wander away to regain my composure. That, and some of the goodies I found, made the two-hour drive from San Diego just about worthwhile.

4788. World Wide Time Zones -- Revisited

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-12 00:00:00 UTC
From: sufana@ceco.ceco.com
Message-ID: <DA2o4t.CpI@ceco.ceco.com>
Source record: 244769

Let me try this one more time. It is apparent from my first posting of my question on time zones that many of you didn't understand the question. Thanks to those who have tried to provide an answer. Here it is again with clarification:

Is there a listing that shows what time zone is being used for various major cities around the world for different times of the year. For example, I switch between CST (Central Standard Time) and CDT (Central Daylight Time). My case in point is that my son is in England right now and is staying in Newcastle, which I would have thought was using UTC time (meaning he should be 5 hours off from me) but he is 6 hours off. This got me to thinking that maybe other parts of the world switch times between summer and winter; or I don't know where England's time zone lines are drawn.

I already know about the 15 degree business and that some countries are off by .5 hours but I am interested in knowing if anyone else is switching times during the year other than the US.

;>
;> Paul OH3LWR
;>

These are very good points, and Paul's suggested isolation
techniques are good both in theory and practice. The only
qualification I can add is to point out that a long distance
run (like to connect terminals to computers) has a
whole lot of considerations over and above connections
within the range of the RS232 specification. The signals
used in computer to terminal operations will cause DC level
shifts due to accumulation of charge from the signal itself,
and must be dealt with in ways different from the normal
engineering practices involved in a single room or cluster of
rooms. Different signalling waveforms and protocols have been
developed to deal with just this problem. That is not
to discount anything Paul has said, but only to paint it as
a "horse of a different color".

73,
Don W3FPR

I don't have a problem with the level of the Tech test, only with the privileges awarded. I'd like to see the Tech privileges limited to something more in line with it's entry-level status, followed by a no-code upgrade path to gain access to all of our spectrum above 30MHz.

About 5 messages previous is a message saying that the only requirement for a license should be the signing of a statement saying the signer has read and understood the regs, "just like CB".

Well, now I don't feel so left out. :)

Glad you had good luck at the swapmeet. I set out to buy some ham/computer CD-ROMs, but the computer-related ones weren't the current version. The new version of QRZ! wasn't available. The latest Amsoft was available, but not in stock; had to be ordered; also wasn't discounted much. The folks with the keys and HT gain antennas didn't show, although they were there in April, and the weather was much nicer. Bottom line, I left with zip!

Jim

Yes, but the equipment is not the issue at hand. Use of the airwaves is
the central issue here.

Which is exactly what the group I know about is doing only because the
local coordinating body has ignored them. If there are any problems of
interference, they will have to burn down that bridge when they get there ;)

Jim, few people "build" them. They buy them. Nearly all trustees are
appliance operators. Let's not make them sound like pioneers. You can
buy a good repeater for a couple of bills.

: Brian AE9K

You may have the SB-220 confused with the SB-200. The SB-220/221 uses a pair of 3-500's, and the price is set more by the manufacturer and condition of the tubes. If the amplifier has old or off brand tubes, it may go as low as $300. For one with new Amperex or Eimac 3-500's in it, add $150 - $200 to the price. Tack on another $50 - $100 for "mint" (this means that there aren't any pen/pencil marks where some dimbulb has hardcoded the knob positions for his particular antenna farm).

That may be true, but when USS LIBERTY (AGTR-5) was attacked by
the Israelis, the latter used broadband HF/VHF jamming to prevent LIBERTY
calling for help (not to mention specifically shooting/rocketing all
the visible antennae on the ship, particularly the 35-foot whips used
for HF comms). LIBERTY's RMs and ETs used a temporary wire antenna
(strung quickly and at great hazard) and *CW* to break through the
"buzz-saw" jamming and contact COMSIXTHFLT, which scrambled fighters from
a carrier in the Med (could have been the FORRESTAL, not sure on that).
As soon as Israeli COMINT monitors realized that LIBERTY had gotten
through with a successful call for help, they broke off the attack and
"offered assistance."

(I was electronic maintenance CPO on USS BELMONT (AGTR-4) at the time
of the LIBERTY attack and had several frinds on board the latter. See also
the excellent book "Assault on the Liberty."

>coordinating body, assigns a pair that suddenly becomes active by a
>SCRBBA assignee? Oops! Now what will you do? Your assignee has just
>spent lots of money getting his machine running on that pair only to
>discover the original assignee came back to life. Will you reimburse
>your assignee? What happens if SCRBBA files suit against your assignee?

I have monitored a few pairs and I believe I have found three and a
possible forth. If you want me to tell you which pairs, you will have
to wait until the group I'm working with gets their repeater working
on one of those pairs before I release this information.

If there is a problem with a repeater, the trustee is suppose to tell
SCRBBA of this so that SCRBBA is aware that the coordinated repeater
will be offline for a while. This is designed to have some kind of
accountability for the repeater in question. This also so if someone
asks SCRBBA about the matter, SCRBBA will have an answer.

Even if this where the case, SCRBBA isn't answering any coorespondances.

>
>Aren't there some summer semester law classes you could be taking
>instead of worrying about this? Ham radio is only a hobby, you know.
>

Sure ham radio is only a hobby. But if that is so, why would SCRBBA file suit against another assignee? Such an action would seem a bit drastic for something as small as a hobby.

Source record: 244933
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.digital.misc

This is drifting a bit off the original topic, but here is some thoughts of how to operate computers, computers and TNCs or computers or remote rotator control boxes in different rooms or different buildings and how to solve the ground potential/ground loop problems.

This is based on my experience planning and maintaining computer terminal networks that are spread over a large area (one or more buildings). It is also based on the 4 wire wiring practice (three phases and neutral) used over here (230/400V) and thus is not directly aplicable to the U.S. wiring practices, but the principles are the same.

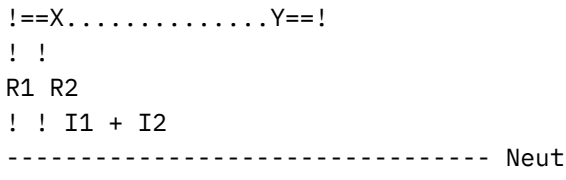
In a three phase power distribution system, no curent is supposed to flow in the neutral wire if all phases are equally loaded. The neutral wire is connected to the earth at the power company and usually in every house. In homes and offices most loads are single phase (connected between one phase and neutral) and thus the full load current is flowing in both the live and neutral wire in the cable between the fuse box and the load (wall outlet, lamps etc.) The neutrals from these cables are connected together and some cancelling takes places if loads are powered by different phases.

The protective earth (PE) in a 3 terminal wall outlet is connected to neutral in any convinient place, previously this was directly in the wall outlet, but nowadays this is usually done in a distribution box feedig the outlet.

In the ASCII drawing below, two loads are connected to the same phase (this is the worst case, but full cancellation will not occure even if they are connected to two different phases) and some computer equipment is connected to the same outlets as these big loads.

Current I1 is returning from load 1 flowing thrugh a lead resistance R1. In a similar way the return current I2 from load 2 flows through lead resistance R2. Two equipment X and Y (say a PC and a TNC) are connected as shown, the == symbol indicates Neutral and PE (the live connection is not shown). The PE is connected to N at the wall outlet or some other distribution box close to it.

```
Live I1 + I2
--------------------------------------
! !
Load1 Load2
! !
I1 ! ! I2
! Rs !
```



Putting in some typical values to illustrate what happens.
If R1 = 0.3 ohms and R2 = 0.3 ohms and I1 = 1 A and I2 = 10 A,
then X is at 0.3 V and Y at 3 V and a 2.7 V potential difference
between X and Y. If the DC-ground is connected to the chassis in
both equipment, then this voltage difference can be measured between
the signal ground terminals (pin 7). If a serial cable is connected
between the equipment with signal ground lead resistance Rs of 2.7 ohm,
allmost 1 A is flowing through the signal ground lead and also through
the circuit boards of both equipment.

The noise margin is greatly deteriorating, since the transmitter
generates the output voltage relative to its local ground reference
and the receiver senses the input voltage relative to the local ground
at its end of the line.

If a thicker wire is used, the current between X and Y will increase
and the voltage difference will drop improving the noise margin.
If Rs could be set to 0 ohms, the voltage difference would dissapear
but 4.5 A would flow through the traces on the PCB causing lots of
problems.

However, if the protective ground (pin 1) or a separate pig tail is
connected directly to the chassis _at_both_ends_ and a better conductor
(such as the shield of the cable) are used for protective ground, the
current flow through the PCB is reduced to a tolerable level.

IMHO, this is far from a good situation, since large currents are
flowing in the shield with a potential fire risk and the current will
induce interference currents into the signal lead. Connecting and
disconnecting the serial cable will most likely burn the receivers or
transmitters if done in the wrong order.

There are several ways to improve the situation

a) Rebuild the power distribution system in the building so that the
PE is kept separate from the neutral and the PEs from the wall outlets
are brought to a single point. This point is also connecting to the
neutral and the grounding electrode of the building. In the normal
(no isolation fault) case, no current is flowing in the PE network
and consequently there are no voltage drops in the wiring, thus all
PE terminals in every wall outlet (and all chassises) are at the
same potential and no ground loop currents are flowing in the serial
cable, even if the the signal/protecting grounds are connected.
This 5 wire wiring system (3 phases, Neutral and PE) are installed
on all new office buildings. However, this solution is usually not
practical for old building, neither does it help if you are connecting

two computers in two different buildings with each own grounding
electrode.

b) If the DC ground of one of the equipment can safely be floated, such
as an external modem powered by a double isolated wallwart, this is the
simplest solution. The cable shield should only be connected at the
grounded equipment end.

c) Use balanced (such as RS-422) lines. In this case both equipment can
be grounded and no signal/protective ground lines are connected in the
serial cable. As long as the ground potential difference between X
and Y are smaller than the common mode voltage range of the receiver
(usually 6.. 30 V) this will work fine. This is currently often used in
industrial sites, where there can be quite large ground potential
differences.

d) Use completely isolated (no galvanic connection) connection between
X and Y. The simplest way is to use current loop (20 mA) signaling
and optoisolators. The cable shield should be connected at one end only.
This was previously (at relatively low data rates) the most common way
to get around the ground potential problem. My suggestion (in a previous
post) to use audio transformer between the TNC and the rig is a variation
of this principle.

Now, responding to Don W3FPR

DB Wilhelm <w3fpr@nando.net> wrote:

>>
> It is not necessary that the DC common circuit actually float. The
> correct procedure is to connect DC common to the equipment ground
> at only one point within any one machine.
========================

Yes, this is good engineering practice, but look what happens when we look
at the situation at network level. If we have one computer and some
floating device at the other end, then we can apply principle b) above.
However, if you are trying to connect two computers, then principle b)
can no longer be applied due to the grounding in _each_ PC. This was
just the situation with a cumputer and multiple VT100/VT220 terminals,
which are connected just like PCs you described. It does not matter what
you do with pin 1 (protective ground), you will have circulating ground
currents through pin 7 anyway. In this case it might be better to connect
both ends of the cable shields for improved noise margin, but I do not
recommend it after having replaced line receivers on several terminals :-)
You should newer break the signal ground (pin 7) connection on RS-232 to

break the ground current, since you will end up with burnt receivers and transmitters very quickly during normal operation.

My recommendation is to ground equipment properly for electric safety and use isolation (optoisolators, transformers etc.) to transfer the signals.

Sorry for this long ranting, but hope that someone might find something useful, next time when someone is connecting together equipment in different rooms or different buildings.

>There is no difference between someone's home station and their repeater. It
>is still their station.

Jim makes an important point, that is worth restating: The repeater
does belong to someone, and the trustee is legally responsible for
the operation of the repeater in many ways.

If you have a VHF remote link to your HF station at home (for DX'ing
from your car nearby or something) - does that mean that anyone,
anytime can use your HF system in your home?

Similarly, if you have your own private auto patch running to your home
phone, is that supposed to be open to other's use?

What is the difference if I cannot afford a private patch and must gather
a few friends together and erect a "repeater" for our exclusive use
(and at our exclusive expense).

Now, the "repeater" may be intended for public use, but it may not. It
is up to the owner / trustee, one who paid for and maintains the station,
the other (maybe the same person) who is legally responsible for many
aspects of its use.

My humble opinion. And, btw, I do not favor "private" systems myself,
just find that they have a right (even if irritating to me personally)
to do so.

Well, hams are continually getting knocked for OUR boring conversations
too. I met a fellow ham and his wife after driving for many miles
toward each other and yakking all the way, I thought a rather
interesting QSO. Since he was a new ham when we stopped along the
highway for our "eyeball QSO" I asked his wife what she thought about
ham radio. She replied "I never heard so much talking about nothing!"
Ah, well. 2 Meters is the most popular mobile band nationwide,
especially for commuting etc, very easy to get a fairly respectable
signal going even when resorting to Handheld units and magnetic
mount roof antennas. The key to a decent signal is a decent external
antenna, and none of them work wonderfully better than another but
avoid the Radio Shack "scanner" antennas that supposedly "work on 2
meter Ham bands" too. They DO work after a fashion but not nearly as
well as even a cheap 1/4 wave single band antenna will.
I can't make out where you live but you might want to ask locally
what good bands are in use. If you live in So. Cal. you might want to
seriously consider forgoing 2 meters and get into 220 instead. For
nationwide mobiling I'd recommend a dual bander (144 and 440) though
I'm partial to 220 myself even with the lower activity levels.
Outside of CA I'd say 144 (2 meters) is the biggest bang for the buck.
I don't know why Radio Shack would favor 10 meters over 2, the profit
margin would be the same on either radio so far as I can guess. Few
"Shack" salespeople have any idea what they're selling or what use it
may be put to in my experience. 10 meters is a great band and lots of
fun..... when it's "open" that is, or if there's lots of local
activity when the band is not hot. In the middle of the night or even
much of any time 2 meters is likely to get you someone to talk to
quicker than 10 meters, though they of course may not be as far away
and exciting to talk to. If you have the room in the vehicle and
the necessary wherewithal ($$$$) go ahead and consider installing both
2 and 10. I enjoy mobiling on 10 during longer drives or trips and
2 meters for getting in touch with the locals when I get to the towns.
Good luck with the studies and tests, look forward to hearing you on
the air!!

Larry,

I concur, excellant article by Gary.

I'm sure there's a code somewhere that makes bonding your RF and AC grounds together illegal but I'm not that well versed in electrical code. It is, however, a bad idea in my opinion. Bonding them together potentially makes your shack a conduit between the two in case of a failure in one system or the other.

I believe the single point ground Gary was refering to is commonly called RF ground. This is a ground system outside the shack, installed to try and keep lightning from entering. The transmission line shields are ideally bonded together and tied to this ground. Some amateurs will put a loop or two in the coax after the bonding point to add a little inductance to the path into the shack. Remember Gary's article, lightning is RF and looking for the least resistance path to ground. The resistance/impedence of the transmission line then makes the shack slightly above RF ground. Hopefully, lightning will not enter the shack although on a direct hit it will probably arc the coax and possibly wipe out the front end of a receiver.

The danger in bonding the two grounds (AC and RF) together is if one or the other fails for whatever reason, the remaining ground provides a circuit for the other. This could be more dangerous than not having an RF ground at all.

As far as what constitutes a good RF ground in an area, any local club should have in its membership an old AM broadcast engineer. Grounding is critical to the proper operation of an AM station and this engineer should be able to provide information on what is needed for soil conditions in a particular area.

Happy Grounding,

Fred Boetcher

Aren't these other modes more frequency hungry than CW? And therefore
there appears to be more stations using it than use CW. Also most CW ops
use lower power than SSB ops and therefore on browsing across the band most
immediately audible signals are SSB

You must not have been listening on 20 CW last night (13 June UTC, 12 June evening/night local time.) WOW! Wide-open band, the entire CW segment was PACKED from 14000 all the way up to the digital part of the band (I copied CW sigs as far up as 14070). Wall-to-wall sigs and I had a hard time getting a dit in edgewise!

Another issue is the health effects of long-term exposure to low frequency
em fields generated by power lines. The jury is still out, but there are
those who believe that living near high tension lines increases your
chance of contracting leukemia and other diseases. I have no information
one way or the other, but you might want to read up on this issue.

For the information of this group the Progress and Freedom Foundation have put forth a proposal to abolish the FCC. I believe this was mentioned here a while ago but if you would like to find out more check out the following.

The Foundation's WWW page at www.pff.org
The FCC is mentioned in "Cyberspace and the American Dream" No detail that I have found yet but at least it gives you some idea of the foundation and where they are coming from.

Their page also has a hot link to the FCC's page. www.fcc.gov

A column on the subject by Bill Machrone in PC Week June 12, 1995 (page 63). Bill Machrone is opposed to the idea and cites the problems of state, political and spectrum resource interest conflicts. He gives a nice quote from Will Rogers "Buy land. They ain't makin' any more of it." The spectrum is likewise a limited resource.

> | |
> Ground Rod ---------+----------+--------Entrance Panel
> | |
> Ground Rod ---------+ +--------Tower, etc

Daisy chaining of any sort is generally to be avoided. However,
this is not a daisy chain if I read the diagram correctly. What
you have is a star connected group of grounds (I'm assuming you
left out a couple of |'s in the drawing) that are connected to
a single entrance point. That's a perfectly acceptable way to
do it. IE

G
|
G---x------------------->house
|
G

That's fine. Now, if you were to do this;

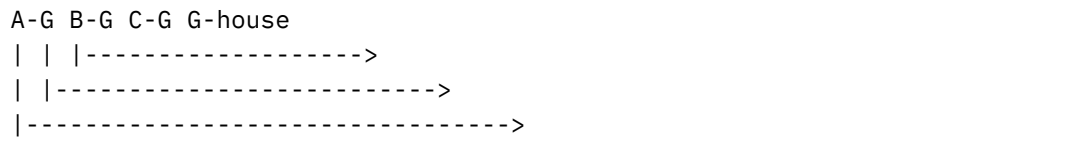
G------G------G-----G------G--------->house

That would be Ok too, but not as desirable because of the accumulated
voltage drops in the daisy chain. What you want to avoid is this;

A----G----G----B-----G-----C----G->house
| | |--------->
| |---------------------->
|----------------------------------->

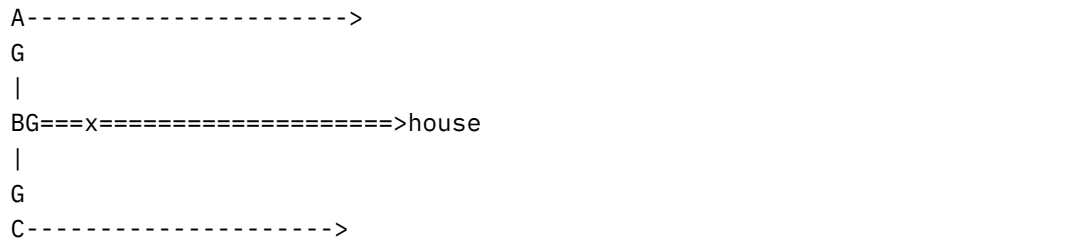
with A, B, and C representing antennas or other external
equipment. Now you have a nasty ground loop through the
chain of G's and that's going to lead to trouble. If you
```

do this;



This is *real* trouble. Now you're depending on the (poor) conductivity of Earth to tie the grounds together, and they'll be at wildly different potentials during a strike. Those potentials will be reflected on the cables from A, B, and C, and will do big time damage to the station if not shorted by a ground window.

Now the better way is to do this;



B's cable closely parallels the star ground run in the drawing. Since A, B, and C's grounds are tied in star, they will be at nearly the same potential. Best, however, would be individual ground runs from A, B, and C's grounds back to a single common point at the house. That avoids any ground loops.

Any of the situations that create external ground loops can be shorted by a ground window at the station entrance. That will protect the equipment *inside*, but equipment in the external circuit, preamps, rotators, etc, can still be damaged by the circulating ground currents. So it's best to avoid ground loops in the external circuit and always use a star topology.

Remember, for lightning, just having good DC conductivity isn't enough. In the first place, at 8,000+ amps of surge, even good conductivity is rarely enough to prevent substantial voltage drops. More important, however, is that lightning is RF, and low *impedances*, including reactance, are important to keep the potential differences at bay. It's always the *difference* in potential that matters. It doesn't matter if everything becomes elevated in potential, as long as everything is elevated to the *same* potential. Star topology is important to make this happen.

Yeah - APRS has a SIG within TAPR. I'll attach the necessary
information below. There is a lot of activity!

Cheers - Greg, WD5IVD

Periodic Announcement - TAPR Information and Internet Access

Greetings from TAPR!

TAPR can be reached via the Internet. The Automated Information Server that
TAPR provides allows anyone to request information on TAPR, products,
newsletters, and lots of other files. To find out more about this service,
send an e-mail message to listserv@tapr.org with the subject line "Request"
and the following text in the body of the message:

help (for a brief set of instructions)
index -all (for a list of all file by topic area)
list (for a list of TAPR Mail Groups)
get tapr taprinfo.txt (or info on TAPR)

In the above message example, "help" retrieves a brief set of instructions
for info, "index -all" retrieves a list of available files by topic and
"taprinfo.txt" retrieves a text file containing information on TAPR and what
TAPR is all about. If you want to retrieve several text files with one
message, use a separate line for each "get filename" request.

Special Interest Groups

TAPR maintains several SIGs in various areas. To get the latest list of
SIG groups, send an e-mail message to listserv@tapr.org with the subject
line "Request" and the following text in the body of the message:

list (for list of mail groups on TAPR.ORG)

To request the information on any mail group, send an e-mail message to
listserv@tapr.org and in the message text include:

information listname (where listname is the name of the mail group)

When you are ready to subscribe, send e-mail to listserv@tapr.org with the
following command in the message text:

subscribe <list> <your name>

List should be the name of the mail list you want to join and Your Name
should be both your First and Last Name.

Current SIGs include:
NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR/AMSAT DSP-93 kits
APRSSIG SIG on APRS

FTP users

The TAPR Software Library is now available via anonymous FTP. You can
access the library by ftp access to 'ftp.tapr.org' in the directory
/tapr. Login in as 'anonymous', with a password of
'your_account@internet_address'.

Packet Raido and TAPR is on the World-Wide-Web!

The series is accesible through the Packet Radio Home Page at this
URL:
http://www.tapr.org/tapr

What's here? A page of links (the Home Page), the TAPR Home Page, a page of
Packet Pioneers and Contacts, a hypertext packet primer and FAQ, and more.

Thanks to Howie, N2WX, for his support and invaluable contributions of
the TAPR page.

>
>There is no difference between someone's home station and their repeater. It
>is still their station.

An interesting claim, which if followed to its logical conclusion
says an operator of a repeater station has no more claim to a frequency
than any other station, and must take the same care as a 75 meter home
station operator to avoid causing interference to others who may be
using the frequency(s) at the time he wishes to transmit. But I've never
heard a repeater station operator ask if the frequency was in use before
transmitting. In fact, I don't know first hand of any repeater station
that has the capability of monitoring its transmitting frequency.

It seems to me that there *is* a difference between a repeater station
and ordinary home stations. The repeater station camps on a pair and
claims exclusive use (24 hr/day) of the pair through its coordination.
I'd call this a significant difference from other ordinary amateur
operation. To me, that special status requires the repeater operator
to take steps to insure that the presence of his repeater squatting on
that spectrum doesn't prevent *any* other amateur from using that
spectrum in accordance with good amateur practice. If operated automatically,
I see little good way to do that other than to operate the machine as
an open machine, or to take positive steps to ensure the repeater doesn't
transmit if there is other activity on the transmit channel. Since most
(all?) repeaters don't do the latter, I think that they are compelled
to do the former as a matter of good practice. Otherwise they have
de facto claimed public spectrum for their exclusive private use, and
that's forbidden by 97.101.

In the interest of home (and ham) safety, let me tell you about my experience earlier tonight.

Funny what happens when you are talking about grounding. During a storm yesterday, one of the GFI circuits in the house was tripped. Problem was that it wouldn't reset, so I went hunting for the cause. I found a defective outlet, but along the way I also found some other things that made me shudder - in the first receptacle along the wiring path, I found an exposed neutral wire that broke when I examined it. Having repaired that, I was hoping I was done, but no such luck, the next outlet on the string had 2 outbound wires from the outlet box, and there was *no* safety ground wire connecting to the duplex receptacle and the safety return wires were not adequately connected together. Correcting the open ground wire condition finally lead me to the culprit receptacle on the rear deck.

What is my point? Simply stated - trust nothing until you have checked it out. This is in a recently built house in a community that *supposedly* has one of the toughest inspection teams in the area for new structures. You can be certain that I have a task ahead of me, and I will not rest comfortably until I have checked each and every connection point in the electrical system here.

I will also be communicating what I found to the town council and the building inspection department. This is the least I can do for the protection of others as well as myself.

73,
Don W3FPR

First of all, >please< use fewer than 80 columns in your postings (about 72 cols is nice). It makes life easier for those of who are going to quote you later, so that everyone can keep track of the discussion. Else you make others do your editing for you.

Second, the New York Times did state the morning after that Morse was used by Capt O'Grady. (If this could be verified independently, I'd be grateful.) The final contact before pick-up was voice. NATO monitors, however, did report QRP signals in the days preceding the recovery, and these were Morse. The NYT was at pains to say that this did seem to be an old-fashioned, obsolete mode, even reminded readers that the USCG had abandoned it earlier in the spring.

Always amazing to me are those who when faced with incontrovertible fact, as when Henry Thoreau reported a trout in the milk, either deny the existence of the trout or the milk. Or both.

'Dateline NBC' at 22:00 EST (Tue 20 Jun) is scheduled to present a piece on the survival training received by Capt O'Grady et al. Perhaps they cover something about survival commo. Watch to see.

In any event, Mr O'Grady seems a fine man, and I am happy he is alive
and well, much more important than this discussion.

I have a YAESU FT-530 HT that is about a year old, and is not getting very much use. There for I would like to sell it. The 530 comes with:

7.2V 600ma Battery
Battery Charger
MH-12 Speaker Mike
C-DC-5B Power adapter for the Car
Operating Manual

The 530 will be sold as a package only. My price is $350 firm for this radio package. If you are interested in this radio or need more information contact me via e-mail lfreitas@mitre.org. Thanks 73 de N1KLF Larry.

I have a '94 and have mounted it on the drivers side front fender using
the L bracket. There is a bay that this will fit in. Finding a place to
enter through the firewall was trickier. I use a dual band antenna and
have had no computer problems. Mounting it here means not having to take
it off when going into the garage or underground parking.

Also, I generate lists of each day's new entries. They're in:

http://www.columbia.edu/~fuat/cuarc/latest-callsigns-experiment.html

Click on the day of the week and you'll get the list of callsigns
acted upon (issued, renewed, etc.) on that day. Short form is
callsign and name, long form has the address, date of birth, etc. info
from the database.

I used to work on those beacons in the Canadian Air Force. They only emit
a rising and falling tone on 243.0 and a second freq. that escapes my
memory at the moment. The unit has a dial that can select voice as well.
It has been close to 10 years since I worked on one and can't remember how
long the battery was good for, so I can see him using it sparinly over the
week that he was evading capture. Also short bursts would keep the enemy
from getting a fix on your location.

: A ground window is simple in concept, and simple in execution.
: Basically, it is a physically small conductive plate through
: which *every* cable that enters or leaves your station must
: pass. Every cable that is supposed to be at "ground" potential
: is bonded directly to this plate as it passes through. Every
: conductor that is not supposed to be at "ground" potential
: is bonded to the plate via an appropriate suppressor device.
: (A book could be written on that subject alone.) Then the
: plate is connected to your single point ground by a heavy
: low inductance strap conductor. Now any large potential
: difference that tries to express itself across cables
: connected to various cabinets in your shack will find itself
: shorted out at the ground window.

Question: Does every cable have to pass _through_ this, or
could this ground window be, for example, a strip of aluminum
along the back of the table (protected from accidental touching,
of course) to which all grounds for all pieces of equipment are
connected? All the power connections, serial cables, etc. such
as you mention would have their ground connection applied to
this aluminum strip, and that would be connected to the house
grounding system, probably via an outlet box as there are no
pipes in that area to connect to.

Workable?

Source record: 244658

Hello all. I have written a program in and for Linux to control my Yaesu FT-890. This program is free to use by anyone (please read README file in the distribution tar file). One may obtain it by emailing me your request. I will then email you the tar file uuencoded.
The program is nothing real fancy, text-menu driven. It will be expanded to do much more in the future, including DOS/Windows/X versions. Remember this is a Linux version ONLY, meaning DOS, Windows, OS/2, etc. will not run it, one must have the Linux operating system.
If you cannot receive this kind of data via email for any reason, please contact me, I am sure we can work out a way to get a disk off to you.

Thanks for your time!

SB QST @ ARL $ARLB060
ARLB060 Response to RFI proposal

ZCZC AG27
QST de W1AW
ARRL Bulletin 60 ARLB060
From ARRL Headquarters
Newington CT June 13, 1995
To all radio amateurs

SB QST ARL ARLB060
ARLB060 Response to RFI proposal

The ARRL has commented on an FCC proposal to deregulate the equipment and testing requirements for personal computers, peripherals, and individual components (in ET Docket No. 95-19).

The FCC proposal, made in February, would not change the substantive regulations governing unintentional emissions from Class B digital devices, and there is no proposal in this proceeding to increase the amount of permitted RF energy from personal computers, peripherals or their components.

''Theoretically,'' the League said, ''radio amateurs will not be affected by this proceeding, notwithstanding the fact that the Commission's certification procedure is specifically intended to ensure that unintentional radiator devices not cause interference to radio services such as broadcasting, aeronautical and maritime communications, and the Amateur Service.''

But the League did express concern that the FCC was proposing to give up oversight that in the past has kept interference from Class B computing devices to radio receivers within ''practicable limits.'' This is a special consideration, the League said, now that many radio amateurs have PCs as permanent parts of their stations. The League said it was important that the FCC reaffirm its intention to increase enforcement against noncompliant devices.

The League said it is the concern of the amateur community that new testing procedures could allow on the market more devices that either are not tested, do not meet RF emission requirements, or both.

The ARRL said its greatest fear is that there will not be significant enforcement of the new rules, nor any effort to evaluate the level of compliance on the part of the manufacturers, and that

there will be no disincentive to simply market noncompliant products. Since the Commission's field offices today seldom respond to complaints of interference to home electronics products, the only time that such issues can be adequately addressed is at the time an unlicensed device is marketed for sale to the public, the League said.

Finally, the ARRL said that since Class B PCs can malfunction due to close-by RF fields, that every PC's Declaration of Conformity should identify where the owner can go for assistance in getting the device to function properly in the presence of RF.

Special Bulletin 25 ARLX025
From ARRL Headquarters
Newington CT June 13, 1995
To all radio amateurs

SB SPCL ARL ARLX025
ARLX025 CT Amateur Radio Week

Connecticut Governor John G. Rowland has designated June 19 to 25, 1995, as Amateur Radio Awareness Week in the state. This week includes the weekend of ARRL Field Day and is an ideal time for amateurs in other states as well to obtain such public recognition.

Rowland, in his statement, cited the 9200 licensed hams in the state, as well as Amateur Radio operators' donation of their services ''free to municipalities and civic organizations.''

Rowland also noted the upcoming Special Olympics, to be held in New Haven, Connecticut, next month, saying that the organizers have ''requested the radio amateurs of Connecticut to provide operational and backup communications for this important event; and .... will also provide international and domestic communications for the athletes to their families in their home countries and cities, and will perform these services on a volunteer, no-charge basis.''

Finally, Rowland cited the 50 Amateur Radio clubs in the state, the upcoming ARRL Field Day, and Newington, home of the ARRL.

A sample proclamation is included in Field Day packages from ARRL Headquarters or may be requested separately from HQ.

>this was an ovous speratic-e opening. i was wondering if any one knew of a
>repeater that transmited on this frequency.
>i have a partial call Kb6??? , cgi,, bdi,,zpi
>this repeater has a voice id

The call 'KB6ZBI' rang a bell; a quick look at the local 6m repeater
list suggests that you were hearing a link from one of the KB6ZBI
repeaters to the KC6JNX repeater which has an input at 52.18MHz.
These machines are located in the Southern Cal area; ZBI is listed
as having machines near Palmdale (Hauser Peak), Ridgecrest (El Paso
Peaks), and San Bernadino (Keller Peak). Any one of these could be
linked to the 52.18MHz machine, listed as being near Barstow.

In <3rh9od$jtn@uuneo.neosoft.com> jreese@neosoft.com (James Reese) writes:

>>>The amateurs on 40 and 80 meters are operating private stations...unless
>>>you know them, you can't just invite yourself int their shack and operate.
>>
>>
>>Doens't apply here, we are talking about repeaters.

>There is no difference between someone's home station and their repeater. It
>is still their station.

Jim makes an important point, that is worth restating: The repeater
does belong to someone, and the trustee is legally responsible for
the operation of the repeater in many ways.

If you have a VHF remote link to your HF station at home (for DX'ing
from your car nearby or something) - does that mean that anyone,
anytime can use your HF system in your home?

Similarly, if you have your own private auto patch running to your home
phone, is that supposed to be open to other's use?

What is the difference if I cannot afford a private patch and must gather
a few friends together and erect a "repeater" for our exclusive use
(and at our exclusive expense).

Now, the "repeater" may be intended for public use, but it may not. It
is up to the owner / trustee, one who paid for and maintains the station,
the other (maybe the same person) who is legally responsible for many
aspects of its use.

My humble opinion. And, btw, I do not favor "private" systems myself,
just find that they have a right (even if irritating to me personally)
to do so.

In a discussion about SCRRBA coordinating open repeaters

: My question is: who appointed them king **** of **** mountain? :-)

As long as you choose to not participate in their open meetings, you are by your lack of action condoning their actions. Does SCRRBA really have a secret policy and procedure for coordination? Every coordinating body has a procedure to de-coordinate an abandoned repeater. Follow their published procedure. Even if SCRRBA chooses to ignore you, you have followed their published procedure. Document everything. Apply your legal mind to their procedures. You WILL win your case.

Once you install your two bill open repeater you are at the mercy of your users ... if you have offended any one in the process ... oh well.

>
>The FCC also clearly states in part 97 that limiting access is permitted.
>Which rule applies here?

The FCC says it's permissible to limit access to the *machine*, but
97.101(b) says that "No frequency will be assigned for the exclusive
use of any station." Now that's just what the coordination is claiming
to do for a closed machine, limit access to that hunk of spectrum to
"members only".

An open machine doesn't interfere with other amateurs using the pair,
in fact it *enhances* their use of the pair. A closed machine does
not, by intent and design, so the repeater station operator must take
steps to avoid interference to any other amateur station that may be
using the frequency at the time the closed repeater wants to key up,
just like any other private station following good amateur practice
is expected to do.

You can operate a closed repeater if you like, but you can't use
its coordination as an excuse to make a de facto claim on the
spectrum for a select group. That's a violation of 97.101(b).
An open repeater makes no such claim, and thus faces lesser
constraint on its operation under 97.101(b).

>Summary - Prodigy was hung by their own editorial Petard!

I read something similar. In addition, not only did Prodigy execrise
control over its message groups, but it actively advertised that fact as a
promotional item. The judge nailed them on that point, too.

I remember reading somewhere an unlicensed operator can transmit voice or CW on ham bands. Rules are one watt output and an antenna no higher than fifty feet. Is this true? I need to scratch this itch while I practice code even if Im sending to myself. Thanks RikiTiki RDU

No, it isn't obvious someone is still teaching Morse code to soldiers.
Keep in mind the audio tapes being played on CNN have O'Grady and the
resuce crew using voice, not code. Could it be the case that O'Grady
simply tapped out SOS using MCW to gain attention? If this is the
case, would it be fair to replace the current Morse code requirments
with the ability to send and recognize SOS?

All this cheering over an incomplete, hazy report of the use of Morse
code! Why the excitement? Could it be the religious devotion to
a modulation mode has stirred up such a fervor among the followers?

;-)

4858. Looking for hobby Tx & Rx circuit

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-13 00:00:00 UTC
From: kff@hk.super.net
Message-ID: <3rj1e6$hpc@tst.hk.super.net>
Source record: 244679

Looking for hobby Tx & Rx circuit

I would like to put together separate Tx and Rx circuits using very simple components (range a few metres only) which can be connected to a computer so as to study modulation and programming speeds. Unfortunately, I am not up to speed on RF but would prefer to use a single crystal of up to 40MHz with transistor/cap components only (no chips) to generate/receive two stable frequencies.

To program the Tx & Rx units, each would need to have 2 logic inputs or outputs. I guess that for the Tx, out1 could switch the frequency (hi/f1, lo/f2) and out2 would switch Tx on/off (hi/on, lo/off). On the Rx side, in1 should indicate what frequency had been received (eg hi/f1, lo/f2) and in2 indicate whether an Rx had been received (eg hi/Rx on, lo/Rx off).

Could anyone suggest a circuit that could do the trick ?

Nonsense Dana ! It has nothing to do with self-esteem - is is selfishness. I do not understand the progression of your logic. If you want to do away with CW because it is somehow unfair to CB'ers - why not do away with all requirements of any kind. Some have indeed made this argument. However (imho) if we do this - Radio will soon go the way of old T-Rex!! Peace!

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
June 18th, 1995
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Well, here in Hawaii we do not switch between summer and winter.
We *should* be 11 hours behind Greenwich (our zone is centered
at 165 degees West, and the state capital, Honolulu, lies at
158W), but our clocks only show GMT - 10 hours. The reason for
this is historic:

During WWII we were put on War Time - our clocks were set ahead
one hour to `save daylight'. The problem is that we were never
taken off of War Time. Either the federal government forgot or
the territorial governor (we weren't a state yet) decided it
would be good for business transactions with the Mainland to
stay one hour closer to you folks. Indeed, our stock brokers
today must get up *very* early to work the Wall Street markets.
They would protest quite loudly if we were to move back to our
proper time zone.

If Dave is around, he'll be able to explain that all of
Australia's states move ahead for summer except one,
which makes reading the train schedule quite difficult.

Interestingly, some Pacific nations use increments of 30 minutes
between zones, and *all* of China is set to Beijing Time.

(As an aside, we're the only state below the Tropic of Cancer,
so twice per year we have shadowless noons as the sun crosses
our latitude (wear your sunscreen!).)

73 from Hawaii (still on War Time),
Jeff NH6IL

4866. REVIEW: THE AMATEUR RADIO ENCYCLOPEDIA, Stan Gibilisco W1GV

Cross-posted to: rec.radio.amateur.misc,alt.books.reviews,alt.books.technical

REVIEW: AMATEUR RADIO ENCYCLOPEDIA, Stan Gibilisco, W1GV, TAB/McGraw-Hill 1994

This book contains the As to Zs of electronics as related to the amateur radio hobby. The author, Stan Gibilisco, W1GV, is well known to many radio amateurs; he was the QST assistant Technical Editor for five years and authored scores of ham-radio related articles in many radio magazines. Stan has been a ham since 1966 and has held the Amateur Extra Class license (W1GV) since 1973.

Thi AMATEUR RADIO ENCYCLOPEDIA answers just about any question any ham or ham-to-be may have. Want to know what Lecher Wires are? Its in the book. It was also on my Extra Class exam! Ditto with Saint Elmo's Fire, Cross Modulation, Capture Effect and Q Multiplier. In addition to the alphabetical references and illustrations, there are several appendices that contain CW abbreviations, ham radio lingo, physical conversions, and a guide to schematic symbols.

Author Stan Gibilisco has done an outstanding job on THE AMATEUR RADIO ENCYCLOPEDIA. He explains technical concepts, some of which are quite complex, in terms that are understandable to non-technical types. The illustrations are clear and plentiful. All in all, W1GV has produced a work that will help both newcomer and old-timer alike gain a better and fuller understanding of the many subjects that come together to make up this great hobby we all share.

Subject: Callsigns from FCC, DOC?

ftp.fcc.gov is the FCC's ftp server, but damned if I can find where
US callsign info is kept.

Also does anyone know if DOC (Canada) has an ftp site? I've seen Canadian
callsign info floating around the net, but not directly from DOC/Industry Canada.

> beliefs in said God.

Because that's an "oranges and apples" comparison. Knowing the code
isn't akin to developing religious beliefs (well, it may be a religion
to *some* ;-) but it does parallel with a pilot learning other "skills"
which are not directly related to flying an F-16, such as survival skills,
rudimentary medical skills; knowledge of how to disassemble, clean,
reassemble, load, and fire a sidearm; knowledge of how to identify edible
plants, insects and animals; knowledge of how to collect rainwater or
purify groundwater; etc., etc. Knowledge of Morse code falls right in
that category because it can be used with a radio, a flashlight, or a
piece of reflective material for signaling purposes.

None of the above have anything whatever to do with *flying* an F-16,
and just like the code none of them will be needed *unless* the pilot is
shot down (or crashes in rugged terrain, away from civilization). In
the case of shootdown, all of those skills (including knowledge of Morse)
MAY be useful at some point, or they may not. But it would be an
imprudent pilot indeed who ignores his/her training in any of these areas
"because its boring" or "its irrelevant" or "its obsolete." Catching
animals with a handmade snare is "obsolete," but like the Morse code it
can be a valuable thing to know.

As for the religious aspect, if he derives inner strength from his beliefs, good for him. IMO that gives him an "extra" edge over the person with no beliefs. But the military cannot insist on religious training, as it's forbidden by the Constitution (separation of Church and State). Morse ain't a religion, so like snaring animals and finding water it can be taught - and should be, IMO (as a survival skill; I'm not talking about Morse testing for hams).

Subject: Grade this term paper?

I thought the young person did a good job. He researched the background, explained some of the activities, and his work seemed to indicate a general understanding of the basic concepts. Just one minor nit -- Technicians CAN operate in the 50.0 to 50.1 and 144.0 to 144.1 segments, even if they have not sat for the Morse exam. Not knowing the grade level of the student, I'm unable to assign a grade to the paper, but I'm assuming a middle school student, so I'd give a tentative "B".

You might check your home owners policy. I have American Family auto and got a simular story .... hmmmmmm .... I was told that I had to have a writer to cover the gear.

So, in a huff, I called my Home owners (Shelter Insurance). Guess what, they covered it. :) Although it was an amount just enough to satisfy the deductable.

I have also been considering ARRL insurance. It is by far cheaper than the writer mentioned by American Family. Don't know how to compare it to Shelter,

and I didn't ask them how they overlap the coverage so. Prudential home owners does something simular. Some years ago my daughter ran into a parked car with her bicycle. Some neighbor kids were playing with a basketball and got a bit carried away. She tried avoiding the ball and the car but the car won. Prudential covered the damage to the car ($270.00). The funny part was the bike wasn't hurt, but it sure creamed that electric mirror on the car.

Bill Blohm (bblohm@boi.hp.com) wrote:

: I've just found out that supposedly MIR transmits on 145.550 MHz. Can
: anyone confirm this? Also, I'm at Nampa, ID (near Boise, ID) and wonder
: when, if ever, I might expect to hear anything from MIR on this freq?

: TIA,

: Bill B.
: KC7JSD

Yes Mir transmits on 145.550 simplex. They are ALWAYS using their ham station, You may hear voice or packet. When I say always using the ham equiptment I mean they use it quite frequently. I've heard Norm working voice during several passes over here and I've connected to the PBBS but got a Busy signal and was disconnected. Norm has been VERY active on the radio and usually goes after the weak stations as opposed to the very strong ones to give people a fair chance at a contact. By the way, when STS-71 finally goes up the shuttle will be using NEW freqs for their sarex station. The downlink will be 145.840 and uplinks are 144.450 and 144.470. They will NOT favor a specific freq. either. These new freqs are for the MIR dockings only. Mir will continue to use 145.550 as will the non-Mir docking shuttle missions.

Dural Report

Dural Report

Here again is a report on the various activities at the Dural broadcast station VK2WI.

The new 10m FM service, on 29.120 MHz simplex, is now a permanent feature, and again we would like to thank Peter VK2EMU for providing the transceiver and Bob VK2DOG for supplying the antenna.

We will shortly be providing a direct service on the 17m band, on 18.120 MHz. This used to be a relay conducted by Graham VK2DIG, but following a change of location this "1812 Overture" as he called it could no longer be run. Peter VK2EMU has provided us with yet another transceiver, and this service will soon return.

Some maintenance was performed on the 160m transmitter, and it is no longer dropping out as much as it used to. Some more work still needs to be done, so those taking bets on when next it disappears should be settling their debts soon.

The old voice mailbox service has not been updated for quite a long time, and now appears to have been removed. A replacement service is being sought once again. In the meantime, Divisional news still appears on the packet radio network (when not censored) and on the Internet. Speaking of the Internet, the NSW Division of the WIA can now be contacted as "wiansw@sydney.dialix.oz.au". As is usual for this Division, this would appear to be a "first"

in the country, and like WICEN if there is interest in a Web page then this can be arranged.

Finally, listeners may be aware of the International Beacon Project on 14.100 MHz (when it's not being jammed by packet radio stations). This network, based on carefully synchronised transmitters, is being expanded to other bands, and this Division is negotiating to set up such a beacon here at Dural.

-- Dave VK2KFU, Dural Engineer

Magazine Roundup

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the June issues of the various magazines.

"Electronics Australia" continues its series on using a scope for vehicle fault-finding; a big-screen 3D television, developed by an Australian firm and not requiring special glasses, is mentioned; an historical item covers a Sydney landmark, A.C.E. Radio; the "Forum" column is likely to prove embarrassing to some and entertaining to others when it reviews the complaint letters sent in by Amateurs; a kit to enable a parallel port to be interfaced to the real world is described; Amateurs interested in conserving energy can build a fluorescent lamp inverter capable of driving the new "energy saver" lamps; the intellectuals amongst us can pit their skills against a chess-playing computer the size of a matchbox; beginners can see how transistors can be used in some simple circuits; and those who work with the 68705K1 microcontroller can build a simple programmer for it.

"Silicon Chip" continues with the construction of a satellite receiver; beginners can build a simple audio amplifier and a digital multimeter; those with an old green screen monitor can put it to work in a low cost video surveillance system; and a multi-channel remote control transmitter is introduced.

"Amateur Radio" describes an interesting "coaxial travelling wave" multi-band HF antenna; the VK5BR audio filter is modified to include an adjustable rejection band; "Novice Notes" makes a return, and outlines the principles of receivers; the "T-Match" antenna tuner is discussed, as are whether trapped tri-banders are as good as they are made out to be; an SWR bridge for UHF and beyond is described, as is a "Linear dB S" meter circuit; techniques for determining the inductance of a toroid and the output impedance of the receiver audio stage are explained; and a crystal harmonic RF signal generator, suitable for use with repeaters, is concluded.

"Amateur Radio Action", in its final issue, publicises a society dedicated to removing the Morse Code requirement; a satellite antenna, the "Volute", is described; the future, if any, of Amateur radio is discussed; a 2400 bps modification for the TNC described recently is built, although it is incompatible with the existing standard; the Federal Office of the WIA defends its actions over the fee rises; a device to measure RF current in radials is made from a clothes peg; and the early history of radar is discussed.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

QRP Contest

QRP Weekend 1995
Contest Rules

Contest sponsored by the CW Operators' QRP Club Inc.
c/o Kevin Zietz, VK5AKZ, 41 Tobruk Ave, St Marys, SA 5042

1. Date: Saturday /Sunday 17th/18th June 1995.

2. Time: 0000 UTC Saturday to 0800 UTC Sunday.

3. Area: VK, ZL, P29 Call Areas

4. Frequencies: All normally recognized CW sections of 80/40/20/15/10 metre bands.

5. Band Usage: In order to spread interest and to reduce possible congestion, stations are asked to distribute their calling across bands using this guide:

On hour = All bands Hour + 15 mins. = 40 metres
Hour + 30 mins. = 20 metres Hour + 45 mins. = 15/10 metres
Stations should preferably call on recognized QRP Calling frequencies (1.815, 3.530, 7.030, 14.060, 21.060 & 28.060 MHz), then QSY to a working frequency.

6. Contact information: Contacts are to be logged with RST plus a 3 digit number commencing with 001 and incrementing by one digit for each contact.

7. Repeat contacts: In order to make greater use of available band space and time, repeat contacts with the same station will be allowed with a minimum of three (3) hours between subsequent contacts.

8. Scoring:
Contact with NON-DX stations - score 1 point for QRO station
- score 5 points for QRP station
Contact with DX stations - score 10 points for QRO station
- score 20 points for QRP station

Note: For this contest the definition of "DX" is any station outside the VK, ZL and P29 Call Areas.

9. Certificates will be awarded to the first three placegetters overall and to the highest scores in each of New Zealand, the Australian States and Papua/New Guinea.

10. General:
Any station claiming to operate QRP MUST NOT exceed a maximum of 5 watts carrie power to the antenna and should sign with the /QRP suffix.
Logs showing conatcts and points claimed should be sent to:-
Ron Everingham VK4EV
30 Hunter Street, EVERTON PARK, Queensland, 4053 Australia
not later than 18th Juky 1995.

IPS Report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(2 JUNE - 8 JUNE)

1. SUMMARY (02 JUNE - 08 JUNE)

Date 02 03 04 05 06 07 08
10cm 73 75 79 82 79 82 84
A 19 18 9 9 9 9 (7)
T 4 8 13 18 32 31 31

SOLAR ACTIVITY WAS LOW ON 6TH JUNE AND VERY LOW FOR THE THE REMAINDER OF THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS UNSETTLED JUNE 2ND AND 3RD AND QUIET THROUGHOUT THE REST OF THE WEEK.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE SLIGHTLY BELOW PREDICTED MONTHLY VALUES ON 2ND, NEAR PREDICTED MONTHLY VALUES 3RD TO 5TH, THEN INCREASED TO 10 PER CENT ABOVE ON 6TH AND 8TH JUNE, AND 15 PER CENT INCREASED ON 7TH.

2. FORECAST (09 JUNE - 15 JUNE)

SOLAR: 09-12 JUNE : LOW
13-15 JUNE : VERY LOW

GEOMAGNETIC: 09-11 JUNE : QUIET
12-13 JUNE : ACTIVE T MINOR STORM
14-15 JUNE : QUIET TO UNSETTLED

IONOSPHERIC: NEAR PREDICTED MONTHLY LEVELS TO SLIGHTLY ENHANCED.

News briefs

THE WIA NOW "SURFS THE NET"

Listeners who have access to Internet can now contact the New South Wales Division of the Wireless Institute of Australia. The NSW Division has arranged Internet access for the benefit of the growing number of WIA members and other radio enthusiasts who "surf the Internet". Our Internet address is:

wiansw@sydney.dialix.oz.au

N.B. This will not be available until 19th June

--Tony Liolio VK2ZLT, who organised net access for the Division

****

AN EXTRA 150KHZ FOR SIX METRE USERS

The proposal made up by Geoff VK3AMK, FTAC and VK3OT has been written into law this week and appears in the TLC's and Government Gazette.

Effective forthwith, 50.000 to 50.300 MHz is allowed for East Coast Amateurs. The extra 50.000 to 50.050 MHz was proposed to allow beacon breathing space and compatibility with overseas EME (moon bounce) operators. The 50.200 to 50.300 MHz expansion was requested to allow relief of congestion in the International DX allocation.

Now it is possible to have a Domestic allocation 50.2 to 50.3 like in Japan and the USA and an International segment free from local QRM.

--Steven Gregory VK3OT

WARNING: PKZIP 3.0 IS A TROJAN HORSE

Users of the popular file compression program, PKZIP, should be aware that a "Trojan Horse" version of the program is currently on the loose. If you run the program, it will try to erase your hard disk drive.

The file is named PKZ300B.EXE, or PKZ300B.ZIP. The support staff at PKWARE Inc. Advise that this claimed version 3.0 of PKZIP is a phoney: the latest official version of PKZIP is 2.04G. If you see either PKZ300B.EXE or PKZ300B.ZIP on your friendly local bulletin board, please advise the sysop to remove it immediately.

SAREX STS-70 POSTPONED

Space Shuttle Mission STS-70, which is scheduled to carry the Shuttle Amateur Radio EXperiment, has been postponed. Mission managers have decided to repair damage done by woodpeckers in the

foam insulation of the external fuel tank. The foam prevents ice from building up on the tank. The repairs will be done at the shuttle Vehicle Assembly Building, requiring the Space Shuttle Discovery to be removed from the launch pad during the week. The mission may be rescheduled for sometime in August.

Mission STS-71, which will also carry the Shuttle Amateur Radio EXperiment, is still scheduled for no earlier than June 22. Following a Flight Readiness Review last Friday, mission managers decided not to select an official launch date due to ongoing work aboard the Russian Mir Space Station that needs to be completed prior to the Space Shuttle Atlantis' rendezvous and docking. The launch team at the Kennedy Space Center will continue vehicle processing work so that Atlantis will be ready for launch anytime on or after June 22. An official launch date is expected to be announced in about one week.

Thanks to SAREX Working Group member Matthew Bordelon, KC5BTL, at NASA Johnson Space Center and the Kennedy Space Center Public Affairs Office for the preceding information. For more information about SAREX, contact the American Radio Relay League's Educational Activities Department.

--ARRL Space Bulletin 007, sent to us by Peter Vernon VK2JPJ

****

NEWS BRIEFS

The Sydney Morning Herald reported this week on the rescue of American fighter pilot Scott O'Grady, who was shot down over near Bihac in Bosnia. Captain O'Grady used his Air Force survival skills to evade capture for six days and nights, switching his emergency positioning beacon on and off to avoid detection by Serbian forces. At night, he walked 30km to cross-country, to an alternative site from where he used Morse code to contact US forces, who rescued him on Thursday morning last week.

We wonder: is Morse is still part of US Air Force training, or perhaps Captain O'Grady is an Amateur?

****

A new wireless telephone system will be introduced in Japan next month, and will become available in Australia next year. The PHS (Personal Handyphone System) will use local "cell stations" having a range of about 300m (as distinct from several kilometres in conventional cellular phone systems). Users will carry a light weight handset that will talk to nearby cell stations linked directly into the conventional telephone system.

The advantages of the system are lower phone charges (about a quarter the cost of cellular calls), and smaller, lighter and

cheaper handsets, costing only about $50. The phones use a 32k bit/sec channel, which can be used for voice or data. The Personal Handyphone System was developed by the Japanese Government-funded Research and Development Centre for Radio Systems.

Competitive systems have also been developed in Europe and the United States. PHS was unvieled to AUSTEL, the SMA, and tele-communications industry representatives at a seminar in Melbourne two weeks ago.

VK2 WICEN News

VK2 WICEN News

There are a couple of changes to the calendar; the Blue Mountains net, conducted by Alan VK2YYJ, is now weekly, each Monday night at 8.30pm on channel 7175 simplex; and Hunter are running a training camp on the weekend of 7-8th October at Crangen Bay, Lake Macquarie; all regions are invited, and further details can be obtained from Pauline VK2GTB on (049) 49-8786, or Frank VK2XVJ at VK2KLW.

This month is quite active; the Management Committee meeting is next Saturday; the Hunter meeting is on 19th June; and there are at least three events on Sunday 25th June -- the Waratah 100 Horse Enduro run by Andy VK2XRX, the Lake Macquarie Half Marathon run by Steve VK2KBL, and the Elouera Half- and Mini-Marathons run by David Shaw VK2TIP, who is also running the City to Surf race later on in the year. David needs a lot more people for these marathons, and he can be contacted at home on (02) 588-5061 or at work on (02) 588-5100.

Those members who have not yet renewed must do so by 30th June, if they wish to remain a member. For just $10 (plus a joining fee) you can be a member of the only Amateur Radio organisation accredited by the State Government to take part in a disaster situation.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275. If members are interested in re-activating the State-wide HF net then the Management Committee would be pleased to hear about it.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Club news: Waverley

The next meeting of the Waverley Amateur Radio Society will be on Wednesday 21st of June at the Clubroom in the Rose bay Scout Hall in Vickery Avenue, Rose Bay behind the Rose Bay RSL. The meeting will commence at 7.30 pm. The lecturer will be announced in next week's broadcast.

On Sunday June 25th the Club will be holding a Boot sale at the same location. Sellers will be charged $5.00 each, buyers get in free. Also a limited number of tables will be available for an additional fee of $5.00.

It is also planned to have a Sausage Sizzle in conjunction with the Boot Sale so come along and sell or buy some pre-loved equipment and enjoy a bit of a chat as well. Sellers will be allowed in from 11.00 am to set up their wares with buyers admitted from 12.00 pm. We look forward to seeing plenty of people there.

The next scheduled exams to be held by the club will be on Saturday 8th July and applications close on 30th June. Contact Grant VK2TU on 319-1913 or Eric VK2KUR on 337-2909 for applications forms.

Submitted by Eric van der Weyer VK2KUR

Club news: Liverpool

The Liverpool and Districts Amateur Radio Club Inc. holds their next meeting on Wednesday 14th of June at 7.30 pm.

Guest speaker will be Wayne Simpson VK2WJS on the topic of Power Supplies, the homebuilt variety. A topic near and dear to everyone's shacks!

Next month we will be holding an auction. Details will be announced in future broadcasts.

Remember: Wednesday night for the meeting to be held at the Scout Camp, Cambridge Avenue Glenfield.

See you there.

Bras VK2QQ
Publicity Officer

Club news: Newcastle

You are invited to a meeting of the Newcastle & District Packet Radio Group on the 22nd June 1995 at 7.30 pm at the University of Newcastle room 825 of the McMullin building.

A representative from the S.M.A. will give us an informative lecture on interference and other facets of their work. Also David VK2XPX will give a talk on TCP/IP and Geoff VK2EO will tell us

what's happening in the FBB BBS world.

There will also be discussion on the future of packet in this area with developments, and also what is planned for the future.

David Moore VK2BDM

Club news: SPARC

The next meeting of the Sydney Progressive Amateur Radio Club

SPARC

will be held on Wednesday the 14th June at 7.30 pm at the club rooms. These are located at Middlemiss Street, Milsons Point, in the first arch below the railway line (the State Emergtency Services headquarters for North Sydney) and immediately to the north of Lavendar Street.

Our guest speaker will be micro-computer industry authority and President of the Australasian Micro-computer Users Society (AMUS), Mr J Rigby, who will be discussing recent developments in micro-computing. Included will be observations on the "Internet" and multi-media. As those who have heard John talk on a previous occasion will anticipate, we can expect a very lively discussion - not to be missed.

Refreshments are avvailable and all are welcome.

Peter R. Jensen VK2AQJ
President

Club news: CCARC

The Central Coast Amateur Radio Club will be holding their AGM this coming Friday 16th June at the Clubrooms in Dandaloo Street Kariong. Written nominations for Committee must be received by the Secretary no later than next Tuesday 13th June.

The meeting will commence at 8pm and all members are urged to attend or to appoint a proxy. Tea and coffee will be provided after the meeting.

from Bob Fitzgerald, VK2XRF
CCARC Publicity Officer

Club news: Westlakes

Westlakes Amateur Radio Club will hold a "Morse Code Spectacular" day at the club rooms in York Street Teralba on Saturday 24th June, starting at 11 am.

Highlights of the day include: demonstration of vintage spark equipment and Post Office telegraph gear which will be used to send free telegrams on the day, over the club's telegraph line.

Morse keys, paddles, bugs, jiggers, competitions, prizes - it will all be there - including the largest collection of morse equipment ever assembled in one place.

Dine from our barbecue - free tea and coffee - all welcome - trash and treasure buyers and sellers are invited.

There will be an auction of surplus club gear at 2pm. Don't forget, the "Morse Code Spectacular" day at Westlakes - Saturday, 24th June, 11 am.

from Greg VK2CW

>
>On the other hand, nothing pisses me off more than to hear radio trustees
>talk as though they own a frequency like it was some kind of private
>property. You don't own the freq., Mr. Reese, and neither does SCRBBA.
>They need to be shown that by concerted action.

Wait a sec. Mr. Reese may have impressed this idea to you that trustees
own the frequencies. But he is free do with his equipment has he wishes
but I didn't get the impression that repeater trustees owned the frequency.

>>
>>>The way the 440 FM band is drawn it is clear that the intention of SCRBBA
>>>is to support the latter rather than the former.
>>
>>I really don't think so. They support the existing systems instead of the
>>potential ones. This is the way their organization is set up.
>
>Well, guys, at least Mr. Reese has openly admitted the following:
>
>1) SCRBBA exists only to serve its own members (which it limits. Doesn't
>include you or me, fellows.)

Mr. Reese defends the position that coordinating bodies should serve
the trustees. I would agree with him if coordination to limit interference.
But SCRBBA is not only a coordinating body, but also an organization that
handles spectrum management. Taking this into consideration, SCRBBA is
answerable to BOTH repeater trustees/owners and the general ham community of
440 users.

>
>2) Mr. Reese thinks that's just fine.
>
>Mr. Reese is entitled to his position. Just remember that his comments all
>derive from the above attitude. Those of us who feel that 440 should be for
>all licensed amateurs, and not merely a self-serving few, should not be
>persuaded by Mr. Reese's defense of SCRBBA.

I don't think Mr. Reese is fully aware of the problems in SO CAL. You are
being MUCH too harsh with him.

>>I believe SCRRBA could do a better job of communicating. I do not believe
>>competition is the answer to this problem.
>
>I believe that SCRBBA has communicated its attitude quite well and that
>competition is EXACTLY what is needed. From his distant perspective in
>Texas, Mr. Reese has concluded otherwise.

From Jim's last message I got the impression that he believes SCRBBA is JUST
a coordinating body, and not an organization that handles spectrum managment.
This is what I believe is the source confusion. SCRRBA handles BOTH.
Mr. Reese may not be aware of this and thus maintaining his position.

>Someone mentioned on this thread earlier that there is a new coordinating
>body being formed, SECRET. There were supposed to be petitions available
>at the ham swapmeets, but I didn't see one at the Inland Empire Swapmeet
>at Fontana yesterday.

I was hanging around space G-something at the TRW swapmeet to see if anyone would come by and sign the "petition".

At about 8:30 - 90 minutes or so after the swapmeet gets going - one person did stop by to sign. Problem was, there wasn't a petition. The person behind the table of goods suggested that if the guy who wanted to sign would fill out a 3x5 card, put his name and callsign on it, and state in a sentence or two why he wanted SCRRBA thrown out, all such cards would be collected and forwarded - I didn't quite catch where or to whom.

The other man behind the table of goods said something like "no, that's not how you do it. You have to have a petition, with a stated position on it that people can sign on to."

I didn't recognize any of the three people involved and don't know who they were.

By this time, I was laughing so hard I had to wander away to regain my composure. That, and some of the goodies I found, made the two-hour drive from San Diego just about worthwhile.

This is way out of the range of this newsgroup, but...

>well, yes. they closed the bridges and turned them into "kodak moments"
>some 10 years ago, as i recall reading. was a problem for the filming since
>the bridges are currently maintained very well but they needed to make one
>of the bridges look delapidated (and they're closed to traffic these days..unsafe).

Excuse me? I've driven on some of those bridges, and I definitely
haven't been driving for 10 years. (Being 21 sort of takes care of
that. :-) Being from the area gives me a *little* credibility, though,
I think.

The *real* problem they had was in getting enough light into the bridges
to do filming. The bridge they ended up using was actually a truss
bridge that they made into a covered bridge (sort of...they still needed
the light). They weren't allowed to tear apart a real covered bridge.

Now, let's all return to more ham-related discussions of much greater
importance, like whether or not we should scrap the code requirement.
:-) JUST KIDDING!!!! I've gotten really sick of that so-called
"debate."

Anyone know any specifics about the data format?

It is my understanding that it is 'cmos' 9600 baud.
Meaning that I should be able to convert it to rs-232c and dump it
into my computer.

I'd like to write my own program to read/save/write the config data
like the commercial version.

like anyone have stuff like:

bytes 0-1 version number where x'0001' is the USA - a version
and x'0002' is the UK version...

bytes 1-8 call sign id...

etc.

: >the world what the actual means were used to communicate with this
: >individual was CW - which is easily subject to counter-measures.
: ~~~~~~

: That may be true, but when USS LIBERTY (AGTR-5) was attacked by
: the Israelis, the latter used broadband HF/VHF jamming to prevent LIBERTY
: calling for help (not to mention specifically shooting/rocketing all
: the visible antennae on the ship, particularly the 35-foot whips used
: for HF comms). LIBERTY's RMs and ETs used a temporary wire antenna
: (strung quickly and at great hazard) and *CW* to break through the
: "buzz-saw" jamming and contact COMSIXTHFLT, which scrambled fighters from
: a carrier in the Med (could have been the FORRESTAL, not sure on that).
: As soon as Israeli COMINT monitors realized that LIBERTY had gotten
: through with a successful call for help, they broke off the attack and
: "offered assistance."

It was fortunate that the LIBERTY had Morse code capability at the time in
order to call for rescue. Be that as it may, perhaps it would be better
to question the failiure of it communications and anti-jamming failures in
this instance. Surely the U.S. Navy would not have failed to recognize
that this elementary sort of jamming was a possibility? If so, I would
imagine that the investigation would centre on the failiure to
provide a solution to this problem.

: (I was electronic maintenance CPO on USS BELMONT (AGTR-4) at the time
: of the LIBERTY attack and had several frinds on board the latter. See also
: the excellent book "Assault on the Liberty."

: >Secondly, it has yet to be confirmed that the pilot did indeed study Morse
: >code during his survival training. This would be bizarre that pilots
: >would be given extensive training in this form of communications because
: >on the balance of probabilities, if rescue is required, Morse code is not
: >likely to be of much use. Therefore,

: ....."For this reason, the 5th Combat Communications Group at Warner Robins
: Air Force Base in Georgia received orders from higher headquarters to reinstate
: training recruits in its (CW) use. It had been dropped years earlier, replaced
: by new, more exotic communication modes." (From "Morse Code: The Essential
: Language" , 1991).

And does it continue to be the case? Orders often come out, but they are
also often rescinded.

[930]

The following advisory is not necessarily for broadcast.
This is just a reminder that the address for the Newsline
Support Fund is Newsline, in care of Andy Jarema N-6-T-C-Q,
Post Office Box 6-6-0-9-3-7, Arcadia California, our Zipcode
is 9-1-0-6-6. Again, and as always, we thank you.
This ends the closed circuit with Newsline report number
for release on Friday, June 9, 1995 to follow in 5-4-3-2-1.
The following is a Q-S-T. A rescue on the high seas, a
tower case loss in Florida and more findings on the possible
relationship between radio waves and cancer. A new study
says there seems to be no connection -- maybe. Find out more
on Newsline report number 930 coming your way right now!

RESCUE AT SEA

Amateur Radio has once again been a life saver on the
high sea. The crew of a vessel in distress are alive only
because of the quick response to their call for help heard by a
Canadian ham.

The crew of a yacht that nearly sank off the Mendocino
coast is safe and back on dry land. This, thanks to a Ham
radio operator in Canada who picked up their distress signal
when Coast Guard officials nearby could not.
The 36 foot ketch lost its rudder and was drifting
helplessly in 24 foot waves off Point Arena Thursday June 1st
when Doug Burrows in Alberta heard their faint mayday calls on
his radio. Burrows called the U.S. Coast Guard in San Francisco,
which dispatched a cutter and helicopter. The three crew members,
who stayed with their boat, arrived at the Coast Guard Station
Golden Gate the following day. The yacht was towed in by a Coast
Guard patrol boat.

(*****
BOWERS vs. FLORIDA

The final chapter in the antenna and tower battle of WA4SNT and N4XLF versus their neighbors appears to have been written and the neighbors have been victorious. W5YI reports that a final ruling from Florida's Forth District Court of Appeals that says that the transmissions of electronic apparatus in the possession of David and Sharon Bowers may not interfere with neighbors electronic devices.
As previously reported, the Bowers had appealed to the American Radio Relay League to take on their tower fight, but the league turned down their request. In a letter to amateurs who had written asking for ARRL intervention the League noted the court had found that the residents of the Bowers community had mutually agreed not to annoy one another. That the Bowers installation of their eighty seven foot tower and subsequent operation had violated this agreement.
Even the FCC which had come to the aid of Mark Nadel, NK2T in his battle with a Long Island New York community turned down the Bowers. Writing at the request of U.S. Senator Bob Graham, the FCC's General Council William Kennard responded by noting that the commission did not believe the Bowers case to be appropriate for FCC to intervene. Probably because it is an issue dealing with deed restrictions over which no regulatory agency seems to have any jurisdiction.

(*****
ARRL DIRECTOR AB8P RESIGNS

Citing poor health, Al Severson, AB8P, has resigned as ARRL Great Lakes Division Director. Severson's resignation became effective on June 5th. Vice Director George Race, WB8BGY, will fill out the remainder of Director Severson's unexpired term. Severson, who is still recuperating from a prolonged illness, said that the only reason he resigned was his feeling that his division needs a vital and active member running it. He has served as an ARRL director since January of 1990, and, before that, as Great Lakes vice director.

(*****
EMF AND CANCER

The Council of the American Physical Society has issued the results of a study titled Power Line Fields and Public Health, a study concerning the potential dangers of cancer from electromagnetic fields that emanate from common power lines and electrical appliances. The APS concludes that the scientific literature and the reports of reviews by other panels show no consistent, significant link between cancer and power line fields. The report acknowledges that it is impossible to prove that no deleterious health effects occur from exposure to any environmental factor. That it is necessary to demonstrate a consistent, significant, and causal relationship before it can conclude that such effects do occur. From this standpoint, says

the group, the conjectures relating cancer to power line fields have not been scientifically substantiated.
The APS says that billions of dollars are being spent by states and municipalities to mitigate and litigate this perceived problem. It adds that the burden of cost placed on the American public is incommensurate with the risk.

(*****
POPCOM CHANGE

Some major changes have taken place at the very popular, Popular Communications magazine. This with word that Chuck Gysi, N2DUP has replaced Tom Kneitel, K2AES as editor of Popular Communications magazine.
According to a press release from Publisher Richard Ross, K2MGA, Kneitel cited personal reasons for his departure from the day to day rigors of operating the magazine. He will remain with Popular Communications in the newly created position of Senior Editor under Gysi.
Ross says that Kneitel has been the soul of the magazine since it was first conjured up in his living room in the Summer of 1982. The first issue was dated September 1982, and bore a cover photo shot by Ross in the Kneitel family dining room.
Chuck Gysi has served as a contributing editor on scanning topics since shortly after the magazine's inception and has been a professional journalist for 21 years. Most recently he served as news editor of a daily newspaper in the Midwest. He has been writing articles on radio since his days in junior high school and has served as editor of several radio organizations' journals. Like Kneitel, Gysi also has an extensive knowledge of and interest in the various aspects of the radio hobby.

(*****
HACKER ATTACK

Two reporters who wrote a book on computer hacker gangs have become targets of alleged cyberspace pranksters.
Joshua Quittner and his wife Michelle Slatalla, both reporters for the New York City newspaper Newsday also wrote "Masters of Deception: The Gang that Ruled Cyberspace." The hacker attack began last Thanksgiving when Quittner received three e-mail messages from a group calling itself the "Internet Liberation Front." The text of the message was very chilling. It read: "Death to all corporations on the Net."
After his phone didn't ring for two days, the Quittners learned that people calling their home were being greeted by a string of obscenities. The hackers also sent 35 megabytes of information to his e-mail address.
Quittner said he had no idea why he was targeted. When asked who the culprits may be, newsman Quittner told Newsday that ten names immediately spring to his mind.

(*****
NEW FCC HANDOUT ON HAM RADIO

The FCC's Wireless Telecommunications Bureau has produced
a new "fact sheet" on the Amateur Radio Service. Its designated
as publication PR-5000, Number 210 and tells the public about ham
radio from the Commissions point of view.

(*****
MEDAL WINNER

U.S. Navy Vice Admiral Scott Redd, K0DQ, has received the
Department of Defense Distinguished Service Medal for his role in
Operation United Shield. This in relation to the withdrawal of
8000 United Nations forces from Somalia.
Redd, 50, is commander of U.S. Naval Forces Central Command in
the Arabian Gulf. He is licensed in Bahrain as A92Q.
The Distinguished Service Medal is the highest honor
given in peacetime.

(*****
800 NUMBER CHARGES

If you've always thought of 800 numbers as totally toll-free,
be aware that there are some now that aren't. NZ9E says via
packet that a recent "innovation" in the telecommunications
industry is the "chargeable 800 number."
Since most people tend to think that an 800 number is
free to the caller, the fact that many of these calls are now
chargeable may be a surprise. In fact, I've heard that some
people have encountered charges for these calls at 10 times
the normal rate.
NZ9E says that if you are quoted a rate or charge figure for an
800 number call, hang up immediately or you're likely to be liable
for the charges. True 800 numbers still cost you nothing, but be
forewarned that everything is not always what it seems to be
today.

(*****
WOODPECKERS DELAY SAREX STS-70

SAREX Space Shuttle flight STS-70 has been delayed due to
woodpeckers pecking holes in the shuttle.
No folks, we are not making this up. Mission managers
have decided to repair damage done by woodpeckers in the foam
insulation of the external fuel tank. The repairs will be
done at the shuttle Vehicle Assembly Building. This means
Shuttle Discovery has been removed from the launch pad and
the mission tentatively rescheduled for sometime in August.
Flight STS-71, which will also carry the Shuttle Amateur Radio
EXperiment, is still scheduled for no earlier than June 22.

(*****
PANSAT

PANSAT is the acronym for Petite Amateur Navy Satellite which is a small, spread-spectrum communication satellite developed by the Naval Postgraduate School as an educational project for officer students. It will be what's called a tumbling spacecraft with a weight of 150 pounds to be completed in 1996 and will most likely be launched from the Space Shuttle by means of the HitchHiker program.
The launch will place PANSAT in a Low Earth Orbit with an inclination of at least 28 degrees. The spacecraft will supply direct-sequence, spread-spectrum modulation with an operating center frequency of 436.5 MHz, a bit rate of 9600 bits per second and 4 megabytes of message storage. Amateur radio ground stations will be able to utilize PANSAT for store and forward communication.

(*****
HAM RADIO AND MORE

Ham Radio and More is now on shortwave. The weekly ham radio talk show began airing on WWCR, tape delayed twice per week on June 5th.
Ham Radio and More airs on WWCR each Monday at 3:00am Eastern Time on 7 dot 435 MHz and again every Saturday at 5:00pm Eastern on 12 dot 160 MHz.
The show is produced and hosted by Len Winkler, KB7LPW.

(*****
DX

In DX, Monk Apollo, SV2ASP from the monastery at Mount Athos writes that he is not QRV on CW mode. QSO's and QSL's for contacts with SV2ASP/A on CW from January 1st to the present won't count.
Also, look for a special operation on the road so as to speak. Newsline correspondent Linda Reader, N7HVF reports that Sister Alverna O'Loughlin, WA0SGJ, of the Handi Hams will be traveling from Minnesota to Alaska and operating on the 40 and 20 meter bands. Listen for her on 7.2685 Mhz and QSL as directed.

(*****
OMIK CONVENTION

Two upcoming events to report on. First the 43rd annual convention of the Omik Electronics Communications Association, Inc. will be held at the Richmond Omni Hotel in Richmond, Virginia from July 12th to the 15th. The event will feature technical sessions, license testing, scholarship awards, entertainment and much more. Contact WQ6I at Post Office Box 639 Claremont, California 91711 for registration and other information.

(*****
10-10 CONVENTION

Also the fifth biennial convention of Ten-Ten International Net, Inc. will meet in Tuscaloosa, Alabama on the 16th and 17th of June, 1995, at the Capstone Sheraton Bear Bryant conference center. Information is still available from K4CIH - 4901 15th Place East Tuscaloosa, AL 35404. Even faster over the internet to K4CIH@AOL.COM.

(*****
YOUNG HAM OF THE YEAR

And finally, a reminder that the nominating period for the 1995 Young Ham of the Year award closes on June 30. That's about two weeks from now. If you are one of those who requested a nominating form but have not returned it along with the necessary information on your nominee, please consider doing just that right now. This is because the judging committee will be scattered across the U.S.A. and each nominating package must be duplicated so that each person judging has the same information.
The Young Ham of the Year award is open to United States licensed amateur radio operators age 18 or younger who have made significant contributions to the nation, their community or the state of the art in Amateur Radio. Nominating forms are available by sending a self addressed stamped envelope to the Young Ham of the Year Award, in care of Newsline at 28197 Robin Avenue, in Saugus California 91350. Or you can download the form from the ham radio files area on GEnie or America Online.
The youngster selected as 1995 Young Ham of the Year will receive an expense paid trip to the Huntsville Hamfest courtesy of Yaesu U.S.A. along with a tour of the Marshall Spaceflight Center and Spacecamp Huntsville thanks to CQ magazine.
Again, the cutoff date for nominating a youngster for the 1995 Young Ham of the Year Award is midnight on June 30th.
If you know a young ham worthy of this honor, now is the time to let Newsline know who he or she is.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

By experience with this Burt Fischer dude is that he really dislikes hams, even though he is one. He is probably implying that a typical ham will never know Love. He has been bitching about us since I can remember, and is basically a real dope with nothing constructive to do with his time.

I personally have him in my Twit Filter, and I heartily reccomend that if you have one, you do the same.

Hi,
The UK Microwave FAQ list which had previously been made available as
an ASCII text file is now on the web.

The URL is http://www.netaccountants.com/uwcfaq.html

This is the first pass so please bear with me. I'll make it prettier and
break it up a little at some later date. Also I'd like to put some links to
more photos, etc.

Any corrections or extensions then please let me know. Maybe it
could be made a little more global.

Thanks to Accountants thru' Internet for the web space.

Regards,
Lehane

I know about this, Jim. There are one or two guys in town who convert all
the radios. The trustees pay them to do it.

As John points out in his post, the issue isn't equipment. The issue,
rather, is the fact that the 440 band is a public resource, which should be
administered as such. Not as a piece of private property.

What puzzles me, Jim, is that you have claimed to abhor coordinating bodies
that are not public, that promulgate paper or inactive pairs (you guys
de-coordinate someone after a certain time; was it 90 days of inactivity?)
and so on, and yet you defend SCRBBA, and tell us we just by golly have to
put up with them.

My question is: who appointed them king **** of **** mountain? :-)

Later.

Although legally, I don't think you are correct, Gary (the FCC has explicitly said, so I've heard from Mr. Reese, that closed repeaters are not forbidden) from a moral and public policy standpoint you are exactly, but exactly, correct. Merely because the wretched things are not forbidden does not make their unchecked proliferation a good thing.

In a huge megalopolis like Southern California (arguably the world's largest if you go by repeater coverage) for a small group to seize control of nearlly an entire band, and then deny its use to 90% of their brother amateurs, is breathtakingly bad public policy. Especially in an era when the amateur UHF/VHF population is exploding. We are licensing FB new ops like gangbusters, after decades of greying and decay. These people need a place to operate.

Mr. Reese would have us roll over and let SCRBBA get away with this. Although I suspect he wouldn't put up with this sort of nonsense in his own backyard, he's happy to let us deal with it here. I don't understand it.

I am pretty sure SCRBBA's days are numbered. There are things afoot.

>transmitting.

It's an automatic device. Even in the FCC's definition. It's no different
than automatically controlled HF packet stations.

>It seems to me that there *is* a difference between a repeater station
>and ordinary home stations. The repeater station camps on a pair and
>claims exclusive use (24 hr/day) of the pair through its coordination.

I've never made that claim. There are other repeaters on the same frequency
as mine. The coordination group determines what the spacing is, not me.

>I'd call this a significant difference from other ordinary amateur
>operation. To me, that special status requires the repeater operator
>to take steps to insure that the presence of his repeater squatting on
>that spectrum doesn't prevent *any* other amateur from using that
>spectrum in accordance with good amateur practice.

The FCC has historically supported the notion that frequency coordination is
good amateur practice.

>I see little good way to do that other than to operate the machine as
>an open machine, or to take positive steps to ensure the repeater doesn't
>transmit if there is other activity on the transmit channel.

I don't see how whether the repeater is open or closde (a political decision)
makes any difference if it keys up when someone kerchunks it.

>Since most
>(all?) repeaters don't do the latter, I think that they are compelled
>to do the former as a matter of good practice. Otherwise they have
>de facto claimed public spectrum for their exclusive private use, and

The FCC also clearly states in part 97 that limiting access is permitted.
Which rule applies here?

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Interference just with Ch4 is pretty damning evidence of a 20 meter
: station with a strong 5th harmonic, probably due to an overdriven
: external amplifier. If a local FM station on 98.5 MHz is also getting
: interference, that would clinch it for sure. Fundamental overload
: should get most, if not all, of the lower VHF TV channels, not just
: one.

Actually, although I agree -- the most *likely* cause of interference to only one VHF channel is transmitter harmonics, it is also fairly possible that the harmonics could be generated in the overdriven front-end of the TV, or in a TV preamplifier (connected to the affected TV or elsewhere in the vicinity). The harmonics could also be generated externally from the transmitter by some non-linear system. The urban legend is that it could be caused by a rusty rain gutter, but in reality, external rectification is usually caused by corrosion in the antenna system, or by some solid-state device connected to a conductor near the transmit antenna. (The most likely cause is VHF equipment connected to an antenna mounted near the transmitter antenna.)

I was willing to just accept that Morse code was used in Capatin O'Grady's resue
because people here had been talking about it.

However does anybody know if Morse was actually used? The radio he was using was
a PRC-112 (referred to as the "Purk One Twelve" or "Prick One Twelve depending on
who you talk to) which is capable of a beacon type signal, code (I don't know if
it is CW or tone), or phone. The accounts and reports of communications that I
have read and heard make no mention of Morse code messages. Capt. O'Grady
apparently used the beacon function sparingly to attract some attention and his
first two way contact with a search plane was by phone.

>Tom

I agree. I use STSPLUS and TRAKSAT and they are both MUCH better than
Bird Dog. They both have alot of nice features that BD doesn't have.
In fact I saw a pass of MIR over Atlanta, GA last night and it was right
on time according to the programs! I first saw it when it was about 40 deg
up in the west and followed it as it passed south of Mars and finally lost
it when it was about 30 deg up in the NE (the sky is quite bright where I
am). I was using elements that were about a week old.
Unlike most satellites, MIR perodically raises its orbit so its important
to use recent elements.

: rfm@urth.eng.sun.com (Richard McAllister) wrote:
: >In article <D9DF0n.7CB@news.hawaii.edu> jeffrey@math.hawaii.edu writes:
:
: To me, operating has always been more fun than developping a new technical
: gadget, apart from the fact that my education was a little on the light
: side, when it comes to electronics. Does this make me a second class
: amateur? I don't think so.
:

I agree with you - despite what others might think, amateur radio
provides a venue to satisfy the needs for many different facets that
amateurs would care to explore. So don't get brow beaten by those whose
perspectives are narrow.

: I think the entire discussion pro and contra CW misses one important point:
: If we consider CW as not essential for the access to shortwave bands, why
: don't we dispose of other parts of the exam, too? For instance: Why should
: I know anything about satellite operation? I never intend to use a
: satellite. Or: Why not discard all sections related to vertical antennas? I
: never intend to use a vertical, because a) I believe in yagis only, or b) I
: will get my next vertical from my local dealer anyway.
:

Although I am loath to comment on the U.S. licensing and certification
structure, I believe that the objectives for the CW and technical testing
are significantly different. As they are significantly different, it
does not follow that to discontinue the testing of one means that the
other should also follow. The bottom line for the need of testing is
that it is mandated by the ITU Radio Regulations. Although the Japanese
have amateur classes that do not required Morse code testing, seemingly
to violate this regulation, the technical restrictions are such that, in
the opinion of the Japanese authorities, international interference is
mitigated, as permitted by the same Regulations.

The objectives for the written technical examinations are different,
regardless of the country of origin. One commonality, again despite
national differences, is the mitigation of amateur service interference.
This is the only means that the administration have to ensure that an
individual has the competence to operate an amateur station and will not
at the same time be a source of harmful interference.

Therefore, because of the differing objectives of the tests, it would be
folly to discontinue technical testing if CW testing were to be
discontinued.

: Hmm, we can think this idea one step further: Eliminate all different
: license classes, create a new one called "SuperExtra" with all full
: privileges. Application for this license will be done by a questionnaire
: that contains questions about what special topics in ham radio you would
: want to be examined, and which parts of ham radio you don't like or are not
: interested.
:

You make a good point. If the individual is sufficiently aware of
his/her potential for harmful interference, does it make sense that the
individual also demonstrate a knowledge, whatever it might be above and
beyond this subject, of satellite operation? I would say no and others
would disagree.

>> street.
>

You might want to go across the street and ask (but don't accuse).

Most of the time, hams don't know they are interfering , particularly if they don't bother their own TV sets.

The problem might be in the transmitting equipment, but it can also be in your TV or VCR or whatever.

Usually, these things can be corrected however I had one instance where I wiped out a VCR when I was on 75 METERS, and the VCR was the problem.

I tried groudning the VCR to different points, line filters, etc but the bottom line was the VCR was picking up the 75 meter signals and they were wiping it out.

The solution was to get another VCR, which the people did do. Everything was cordial and friendly. We even called the manufacturer of the offending VCR to report the problem (and try to get some help).

Date: 1995-06-14 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.T8VP7c1w165w@GRAFex.sbay.org>
Source record: 244539
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your

system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE
and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

4896. Time zones.

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-14 00:00:00 UTC
From: ibx@Cs.NOtt.AC.UK
Message-ID: <199506141812.LAA08384@UCSD.EDU>
Source record: 244540

Charlie, AJ9N (sufana@ceco.ceco.com) asked about time zones and thought that only the USA used "summertime" zones.
The RSGB published, many years ago, an operator's handbook which had lots of useful information about countries.
One item was a list of information about countries showing, amongst other things, prefix, zone and the approximate dates when the countries switched to/from summertime.
From the look of that information, most countries have summertime zones.

Friends out in New Zealand surprised me by telling me that their time zone was currently 12 1/2 hours different from GMT. I'd thought that most time zones were whole hours different from GMT. I'd not expected to see a fraction.

>old T-Rex!! Peace!

The reason you don't follow my logic is that it isn't my logic.
I've never said we should do away with the Morse requirements because
they are unfair to CBers. I have said we should reform the Morse
requirements to make them consistent with Part 97.1.

I'm also tired of seeing hams bash CBers, pretty much the way
I'm tired of seeing anyone bash anyone else for petty or non-extant
reasons.

However, these two paragraphs are independent of each other, not
part of some logical progression. Be careful what you read into
my words, especially if I never wrote it. ;-)

>I was willing to just accept that Morse code was used in Capatin
>O'Grady's resue because people here had been talking about it.

Don't do this; this is how urban legends get started.

>However does anybody know if Morse was actually used?

The Dateline interview I saw last night featured both O'Grady and
the pilot that first received his signal. The pilot that discovered
O'Grady explained that he recognized O'Grady's voice, and that is
what made him pay attention. O'Grady specifically said his voice
was cracking. The audio tape has been played several times of
this exchange. As the news media has had a chance to actually
interview the people involved and piece together real information
rather than hearsay, it is becoming pretty clear Morse code
had nothing to do with O'Grady's rescue.

4901. Source for small, shielded, 18-conductor cable?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-14 00:00:00 UTC
From: slovell@u.washington.edu
Message-ID: <3rncro$ptl@nntp5.u.washington.edu>
Source record: 244545

Hello everyone. I know this isn't a homebrew question, at least in the amateur/rf sense, but I know there are a lot of real in-the-know people reading this newsgroup so I've got to give it a try:
Does anyone have a suggestion for a source of small, shielded, 18-conductor (or 20...) cable? The individual conductors should be in the range of 30 to 32 gauge or smaller, and stranded. The cable needs to be shielded, but not the individual conductors. The cable should, ideally be quite limp, but we can live with some rigidity if the cable is small.

I appreciate your help. By the way, this is for a medical research project, so your assistance is towards a good cause. Thanks.

This is yet anouther example of someone with a prodigy account that is clueless about what to do. Big mouths talk first, think later. This is no doubt one of those twisted and sick "things" that walk our streets. I wonder if it is really a man who is confused about what it is, female or male. Think about it, it has no clue as to where to post a message.

Don't get me wrong, I think that adult things such as this have a place, however, I do not belive that it should be forced upon us. Like this was. It has no place in a family type newsgroup.

turner@safety.ics.uci.edu (Clark Savage Turner) writes:

>If you have a VHF remote link to your HF station at home (for DX'ing
>from your car nearby or something) - does that mean that anyone,
>anytime can use your HF system in your home?

While there's no doubt that HF links to repeaters are ``neat,'' and autopatches to everywhere are ``neat'' and interfacing your home lighting system to your repeater via DTMF tones is ``neat,'' I don't think such applications make the best use of spectrum as valuable as a repeater pair.

The primary need hams AS A WHOLE have is to communicate with each other, and I think that a busy repeater is much more interesting and useful than a dead one just waiting for its three or so users to try and play for five minutes calling CQ on 20 meters via the link.

Let them interface their landline to the HF radio -- leave the repeater spectrum for ALL HAMS.

Also, the autopatch is an excellent safety feature, but it can be controlled and the repeater can be left open to all hams.

>What is the difference if I cannot afford a private patch and must gather
>a few friends together and erect a "repeater" for our exclusive use
>(and at our exclusive expense).

It may be your exclusive expense, but it's not your exclusive spectrum, and there are others willing to bear that expense and serve the greater ham community -- let them have the frequency.

>My humble opinion. And, btw, I do not favor "private" systems myself,
>just find that they have a right (even if irritating to me personally)
>to do so.

FCC rules, especially when vague, can and sometimes should be changed.

Current practice (i.e., what I've seen recently) on mountaintop radio sites around here seems to be to have replaced the feedthrough ground plate with a simple grounding bar to which all of the incoming coaxes are bonded before they enter the building.

I can see that this is simpler and much less prone to water entrance problems, and it seems to me this might be adequate.

Is this the new practice or did someone just get real lazy?

Spelling, personally, continue, dyslexia, sights (wrong usage), zealots,
particularly and different.

And which form of English are you using?

Spelling flames for nits are not welcome, but your writing sucks.
There is a *real* difference between an occasional typographical
error and just plain sloppy writing.

Also, it only shows a basic ignorance to flame someone for using
the English vs American spelling. Especially if the source of the
message is a .uk site.

If you insist on being a dick head on the net, at least try to be a
literate dick head.

4908. (2) Knight radios 4 Sale

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-14 00:00:00 UTC
From: mirage@holly.ACNS.ColoState.EDU
Message-ID: <3rnhml$1q22@yuma.ACNS.ColoState.EDU>
Source record: 244552

I have two Knight radios for sale. One is the TR-108 2 meter
transceiver, the other is the T-150A 80-6 meter transmitter.
I have full documentation for the 150A but none for the 108.
They are in excellent looking condition and the 150A works
great. I have not tried to hook the 108 up yet to see if it
works as I have had little time.

If you have an interest in either or both of these radios, please
contact me.

Thanks!

>If you people do not like CW why did you become a ham ?

Um, maybe because there is more to amateur radio than Morse code?

>It is part of the hobby, like it or not ...

Yeah, but it isn't *all* of the service, like it or not...

>If we are willing to eliminate CW why not eliminate voice ? I'd rather
>chat on CW than voice ...

Well, I've got a delightful idea then, why don't you go chat in
Morse code and stop posting notes which are greater than 80 characters
wide to the Usenet?

>If digital communications are so great lets all just send messages to
>each other and chat via packet ? WHY!!! I'll tell you why ... modes that
>may interest some, blow to others ...

Oh, like digital modes blow and Morse doesn't?

>If you do not like CW just don't
>get on it ... but leave us CW operators alone
>and stop F'n with our band width !

Hey, there's a web page for people like you:

http://www.clueless.org/clue_server/clue.html

Accessing this page, you'll be able to get a clue from the clue server
and then maybe you'll realize that the discussion about Morse code
is about revamping the requirements, not doing away with the mode
itself.

>--... ...--
>-. ..... --. .--. ..

73 to you, too, Mr N5GPI

Dana

P.S. Please forgive me, I've declared today to be flame day, I'll
be back to normal tomorrow. Maybe.

Hi Dana - I think part of what you mean is not to gereralize about any group of people, for any reason. If this is what you mean, then i certainly agree. It's like saying all white people are criminals - or all Asian people are racist - of course this is moronic! (unfortunatly this happens all too often) What bothers me about CB is how frequently I have personally heard it used to further criminal ends. ie. - drug dealing and prostitution come to mind. I live in a rural area so I don't know this for sure; but I have been told this type of criminal use of radio is happening all the time in large urban areas on 2 meters. I think this may be one unfortunate result of the No-Code - there are so many talkies out there being ripped off right and left. Also I understand a famous mail order auto discount parts house is selling 2 meter talkies via mail - no questions asked. I think Dana, that if this process of "dumbing down radio" is continued into all spectrum areas - we are going to lose the whole ball of wax. I sorry if that sounds like bashing or somehow elitist - because I am not that sort of person.However, I try to be somewhat of a realist...at least part of the time!!!!!!

CSPAN or CSPAN2 gave them a whole program on the subject. When severely challenged from the audience the response was that they didn;t expect their proposal to be adopted in toto but were trying to prompt improvements. The general theme was that the spectrum didn't belong to the government. The ordinary laws of trespass would be applied to settle interference, as you would try to go to court to stop people from building on your front lawn. I did not hear any discussion of how one decided ownership, except by purchase, but it was not clear from whom one would buy. The whole thing seemed to imply that present licensees might have a property right in spectrum, but noone dared to say that.

Geographically, New Zealand is +11 hours different from GMT, but at some stage it was decided to make things easier by declaring the difference GMT plus 12 hours (which it is now), EXCEPT for summertime, or, as we sometimes call it,"daylight saving," when GMT is +13 hours. Think we come back onto summer time about October. I'm told that we once had a time difference of 11 & 1/2 or 12 & 1/2 hours 'round about the time of WW 2, but can't verify this. Right now it's definitely winter, and N.Z. is GMT plus 12.
Australia had some weird time zones this year. Don't know if they're permanent.

: One of my requirements is that the radio be modifiable for Marine
: bands. The kenwood th28at Alinco DJf1t and Yeasu FT11r all appear to
: be modifiable for this purpose.

Just be informed that one cannot use an amateur HT on marine
frequencies due to that wonderful "type-accepted" clause. The TH-28A,
though, does have the largest receive range...360-520 MHz and 118-174
with the MARS/CAP mod.

: I'd like to get the opinions of anyone whose used any of these HT on
: the radio in general and specifically on your experience with these
: mods.

I love my TH-28...best 2m ht I have ever owned. It does a nice
job with intermod and has many features that make using it a pleasure. 73!

Though I have been away from cw for a while, I agree with Tony.
I have worked cw, voice, rtty, & packet. The one I like the least is
voice. Main Reason, once you work someone without the slant of
the accent &/or tone of the voice it makes a lot of the QSO's much
more enjoyable. Probably on both ends. I will admit though, I once
had a different opinion.

Hi,

KC5EGG Jerry here looking for a few items that might be hanging about the shack. All are Yaesu accessories. A mobile mounting bracket MMB-31 for the old FT-290 not the newer FT-290MKII. One or two MMB-37 brackets for the FT-5200 main body and a YK-1 or YK-1L remote mount kit for the FT-5200. If you have any of these that are surplus please drop me an e-mail. I can buy any or all of them new but if you have them and don't need them they can turn into useful cash.

I haven't had a problem putting out a good signal with my HT (while > it is in my car it has 5w) and I can hit all of the repeaters around > Rochester, NY with FQ.

Actually if you look around you can get some good deals on power supplies and make your own antenna. I bought my RS-20A for $50.00 from someone on the net and paid $49.95 for my AR-270B, and about $30.00 for the assorted mounting hardware and coax. Grand total is $129.95. So if you can pick up a used rig for under $400 you're looking at $530-550 total - not all that bad.

From: bert@tiac.net
Message-ID: <3rlbom$ir6@sundog.tiac.net>
Source record: 244595

This race leaves this friday the 16 th of June. There will be some HF rigs on board and 4 hams that I now of on Yacthts. Most Yatchs will be returning to the US on Monday the 26th of June. It normally takes 110 hrs. This is a good time to check in to marine nets such as 14300. retuning a Marine mobile call during this period is reasuring to hams on board various Yatchts. Passing traffic to families of race participants is very much appreciated and the first time some crew on board and families back home have ever heard of ham radio.

I will be operating on the return trip (the 26 - 29) on the lower portion of 40 and 80.

Source record: 244596

I have a couple of Motorola crystal controlled radios that I would like to use on 450 MHz FM. I am looking for schematics / service manuals for same. If you have access, I'd appreciate getting a photocopy. These are MAXAR 80 units and go by the model numbers:

D34TSA3300BK and
D34TSA1300AK

Both appear to be 2 channel, crystal controlled units. The 3300 unit has a button on the front that is marked "monitor", which I have no idea what its function is. The 1300 does not. Otherwise, they appear identical. I'd like schematics. Any help would be appreciated. I have no idea what the power output is, but they seem to be of the size to be in the 10 watt area.

Please respond publically to the net or privately to:

John.Klingelhoeffer@comsat.com

Thanks.

Let me also recommend the DOS-based Skymap (there are two programs
of the same name) which can be downloaded from the same RPV BBS
that is the home of STSPLUS. It is a little harder to set up
than the other two but produces very nice star charts with
satellite paths and also prediction tables with culmination
coordinates and times. For those into exotica, it also predicts
satellite transits of the Moon and Sun.

I have found that no matter what the vehicle (other than fiberglass) the best place to mount an antenna is on the roof. One hole 3/4" in diameter and you are in. Don't have to worry about sealing holes, the antenna mount does it. Don't have to worry about crimping coax in doors, no doors to worry about. Don't have to worry about signal pattern or SWR, the roof makes an excellent ground plane. And - - - with the popularity of cellular phones, having a roof mount antenna may enhance your trade in value (in my opinion).

Drill the hole and enjoy.

I've got a 6-element triband TH6DXX on a 35 foot tower and we're renting the house and moving to Santa Monica for business reasons. I hate to see the place go to a non-ham, since I've had such great fun working DX here for 5 years.

4 bedrooms, 2 baths, great yard, seclusion, view. If you're needing or wanting to move to Hollywood (right next to Universal Studios, down the street from Warner Brothers, NBC and Disney), give me an email reply and we can talk.

It's listed in the LA papers, and we will rent it by mid-July to someone. I'd love it to go to a ham who will enjoy the beam and not consider it an eyesore.

Looked at the US tax codes recently? :) Modularized testing wouldn't be
more complicated than that. (At least it makes sense.) Hehehe...

> My belief currently
> is there should be only two classes of license, entry and general;
> any further recognition of advancement should be done by non-governmental
> organizations.

Wasn't it like this back in the 40s & 50s? (IE General had all privs on
all bands.)

> One of the reasons I think the CW-for-HF requirement
> is bad is that it stands in the way of such a simplification.

I still think the CW issue lies out-of-reach for normal mortals, since
it's handled by the ITU and not the FCC. (I'm sure that's been discussed
elsewhere, so I'll stop at that.)

But nevertheless, this could be part of the modular system you speak of.
I could imagine different "sub-elements" similar to the system we have in
place now, except there would be sub-elements for satellite work,
RTTY/amtor/data, voice, etc. The operator would get different priviliges
according to which sub-elements he/she completed. So if you wanted to
work SSB voice, you'd only have to take the sub-elements pertaining to
that. (IE general safety and operating procedures, voice, and morse (if
working HF).) Kind of like CA driver's licenses. (Class C is for normal
cars, class A for driving big rigs, class M1 for mopeds, M2 for
motorcycles.) Hmmm...

Not in the ham bands by any means. You must have read about the 160-190 KHz (not sure of the exact frequencies) but it is license free down there with the restrictions you mention. The fifty feet is from the transmitter to the tip of the antenna.

Any transmissions anywhere in the ham bands require a license..."period..dot." to quote Capt. O'Grady. ;-)

Message-ID: <3rlrqt$16q@maple.enet.net>
Source record: 244604

** Periodic Posting **

The QRZ Callsign/Email Registry is up and running. Hundreds of hams
are checking in daily to update their e-mail addresses.

With our WWW page, you can input your e-mail address directly into the
QRZ Callsign Database, where it will be published on both CDROM and on
the internet. Using this page, you can add your own email-address and
watch it immediately update the online database.

I encourage everyone to check in and add their e-mail address to the
system. It just takes a second, and you only fill in your callsign
and e-mail address - it's that simple.

The URL is:

http://www.qrz.com/email.html

The QRZ e-mail registry will be available online via WWW 24 hours per
day and will update and maintain the database in all future versions of
the QRZ! Ham Radio CDROM.

Thanks and 73,

-fred AA7BQ

This is for the 160-190 kHz "Lowfer" band. You need a license for the
ham bands, where on a wide-open band (like 20 mtrs is at this moment) 1
watt will get you into Europe with no problem!

Content-Transfer-Encoding: quoted-printable
Content-Type: text/plain

A Tail (spelled correctly) of Two Hams.

In a place far, far away in a time not so long ago
(actually Cape Cod 1991) there were two hams who were friends.
Moose, KF1OF, and Dick, KC1HOT. It came upon a great contest
weekend in November (yes I know great contest is a contridiction
of terms). The contest was called Sweepstakes not to be confused
<del>

This is quite honestly the most sophomoric stream of drivel I have
seen in ages. Believe it or not, there are very well adjusted hams
who really enjoy contesting, DX'ing, EME, traffic handling, MARS,
ragchewing, 2m FM, equipment restoration, etc., and still have a
happy home life. By the same token, these hams may have a
spouse who thoroughly enjoys jogging, stamp collecting,
gardening, weight lifting, bird watching, fishing, sewing, or
repairing motorcycles. The point is, there is more to a mature
relationship than living inside each other's armpits...unless
you're some love - starved 16 year old who is still maturing.

I, like Mr. Newkirk, wonder why old Burt even takes the time to
post to a radio amateur newsgroup must less have an amateur
license. Not only do I enjoy my hobby in a secondary role to
my family and career, but it's really fun when my wife slips
quietly into the radio room, pulls my chair back from the desk,
and spends the next few minutes making me ever so glad I
keep her first in my life!

Source record: 244608

Just a note....I have found some second hand filters for the Kenwood 940 made by IRCI. I called them to see if I could get the paperwork - it should be a one or two page sheet (that is what they provide for the ones I got for my TS 440). They were very rude and just didn't want to send me the 2 pages since I had bought the filters second hand. The woman on the phone continued to complain about how hard it was to do the copying AFTER I offered to pay whatever it cost! After a few minutes of MY long distance day rates from CA. to FL. I gave up and decided to try here.

Wow.

Anyone have the instruction sheets for installing the matched 400 Hz CW filters inside the Kenwood 940? I also have the AM filter, so if anyone has that sheet I could use a copy of that one, too.

IF anyone needs the paperwork for the matched SSB filters for the Kenwood 940 or the 440, I would be GLAD to send you copies, as you might not get them from IRCI!

4940. **1ST EVER HAM OPINION POLL, NOW ON THE WEB**

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-14 00:00:00 UTC
From: john_fay@lightside.com
Message-ID: <john_fay-1406950001480001@user52.lightside.com>
Source record: 244609

I have estalished a WWW site that includes the 1st ever Ham opinion poll.
The question this month is "Do you support the new vanity call program,
about to go into effect in the US?" The poll takes into account license
class and the age of the voter. Your vote is tallied instintly and you see
the results on-line.
Check this site out at, http://www.csz.com/sarrio.html.

But if she did that during a contest in a revealing bit of attire, would you tell her to come back later? I have asked hams that question and they all said they would tell her to wait (I asked contesters).

>"members only".

No. Coordination only means there will not be another repeater assigned to the same frequency within a certain distance/height/power/etc... It gives the trustee no rights to the frequency, nor does it take any away. Coordinators are just that. They have no real power.

>An open machine doesn't interfere with other amateurs using the pair,
>in fact it *enhances* their use of the pair. A closed machine does
>not, by intent and design.

Neither type of system has more or less impact on the frequency.

>You can operate a closed repeater if you like, but you can't use
>its coordination as an excuse to make a de facto claim on the
>spectrum for a select group.

I have never claimed that repeater coordination does anything of the sort. It is merely an attempt to prevent repeater systems from interfering with one another.

>That's a violation of 97.101(b).
>An open repeater makes no such claim, and thus faces lesser
>constraint on its operation under 97.101(b).

There is no difference. Both open and closed systems use the frequencies equally. Their impact on the amateur community at large is determined only by the use of the system.

Thats funny...I asked the same question of the contesters around here,
and I didn't get that answer from any of them. The answers I received
are very different from the one you received. People seem to react
to us differently Burt. I can only imagine how you must have asked
the question.

4944. Is Tesla Society a Scam?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-14 00:00:00 UTC
From: WONG_WAI@eos.bentley.edu
Message-ID: <1995Jun14.071329.1@eos.bentley.edu>
Source record: 244613

I recently posted an article to the Tesla mailing list, questioning the ethics of the society, and asking members to belay my fears about the society's commercialism. To my surprise, my article was censored and never posted to the list. Since the society claims that it exists for the public dissemination of information and technology, this came as quite a shock. Apparently, It is not their policy to allow their members or list subscribers to debate issues relevent to the society's ethics or financial activities. On this basis, I have re-considered my possible membership. I would like to know if others have had similar experiences.

****

The following is my original post :

****

For some time now, I've been reading the USA-TESLA List. I find the articles thought provoking, and I believe the writers to be honest and sincere. I wish, however, I could say the same for the owners of the list, the ITS. I've listened to many hours of Extraordinary Science Radio Hour, purchased several of the Extraordinary Science magazines, and even considered joining the society. But I, like many other listeners, readers, etc., I'm sure, have been disappointed and even insulted by the subjects and materials presented. The claims are incredible to say the least, and unsubstantiated. The buy, buy, buy rhetoric of JW McGinnis, resembles the slick salesmanship of a carnival hawker, and goes on and on, ad nauseam. I consider myself to be an open-minded fellow, but not so open-minded as to be gullible. The articles list difficult, if not impossible, to obtain materials (like barium ferrite magnets), and more often then not, leave out critical information that one must purchase the book to obtain (if the book contains it at all). This is unfair, considering the $8.95 price tag of the magazine itself. I'm lead to conclude that this is all just a scam, and issue a challenge (in the true spirit of science) to anyone to prove otherwise. Give the readers of this list an exercise, something that can be done at home, using readily available materials, that will prove any of the 'extraordinary' claims made by the ITS, any of its members, or any of its radio show "interviewees".

Believe it or not, the world IS ready for this technology. We just want some proof that it's legitimate...

-WaiWong

****

When questioned about censorship and the rights of the list subscribers, the list manager responded curtly. This was his final word:

Yes, the idea is the entrance panel is connected to several ground rods using individual cables and then not only regular house wiring but also the tower and shack rf wiring goes to the same point. Like a big star. (For some reason I can't draw that)

Where my scheme breaks down at the moment is that the tower has two individual ground rods and there is one on each of three guy wires. I'd guess that could cause a loop, eh?

Thanks,

Larry

You mistakenly assume that the groups of which I am a part have not dealt
with them.

They did ignore us.

I do intend to win ...

>Once you install your two bill open repeater you are at the mercy of
>your users ... if you have offended any one in the process ... oh well.
>

No reason to think that this is the case... If you are suggesting that
SCRBBA types might jam such a repeater, well, frankly I doubt it. Most of
them don't even have the vigor to operate their own closed repeaters.
Listen on 440. The only activity, mostly at least, is on the few open
repeaters.

Source record: 244618
Cross-posted to: aus.radio,rec.radio.amateur.misc,rec.radio.info

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 862 11th June 1995

ANARTS MEETING

THE NEXT MEETING OF THE SOCIETY WILL BE ON FRIDAY 16TH JUNE AT THE USUAL LOCATION. CONTACT COL VK2CTD, OR PAT VK2JPA IF YOU WOULD LIKE TO ATTEND (AT A MEMBER'S HOME), OR WOULD LIKE ANY MATTER DISCUSSED AT THE MEETING. FOR CONTACT DETAILS SEE THE SOCIETY INFORMATION AT THE END OF THIS BROADCAST, OR THE CALL BOOK.

DO NOT FORGET THE ANARTS WORLDWIDE DIGITAL RTTY CONTEST THIS WEEKEND COMMENCING 0000Z 1OTH AND FINISHING 2400Z ON THE 11TH.

IF YOU DO NOT WISH TO BE A CONTESTANT, REMEMBER -- CHECK LOGS ARE VERY WELCOME. YOU MAY HAVE BEEN THE ONLY ONE TO HEAR SOME STATIONS, SO LEND AN EAR (AND AN EYE) AND SEE WHAT YOU CAN DO TO HELP.

MAILBOX OPERATION

THE MAILBOX HAS BEEN IN OPERATION, QUITE SUCCESSFULLY, FOR SOME WEEKS. THE NUMBER OF STATIONS CALLING ON 40 METRES AFTER 0600 UTC IS FAIRLY SMALL, AND SO I HAVE DECIDED TO SPLIT THE TIME OF OPERATIONS BETWEEN 40 AND 20 METRES. IN A FEW WEEKS TIME I SHALL BE ABLE TO SEE HOW WELL IT IS BEING UTILISED ON BOTH BANDS, REALIZING OF COURSE THAT PROPAGATION IS NOT THE BEST AT THE MOMENT. THE MAILBOX WILL OPERATE AT/ON THE FOLLOW-ING TIMES AND FREQUENCIES :

7042 KHZ : 0100 UTC (APPROX) TO 0600UTC
14075 KHZ : 0600 UTC (APPROX) TO 0900UTC

THE APPROX TIMES TAKE INTO ACCOUNT THAT THE CALLBACKS MAY BE EXTENDED AT TIMES AND FOR THE 0600 TIME IT DEPENDS IF THERE IS A GOOD FOOTIE GAME ON THE BOX THAT MAKES ME FORGET TO CHANGE FREQUENCY.

---

20 METRE CALLBACKS

ATTENTION 20 METRE STATIONS...AT THE PRESENT TIME, WE ARE IN A POSITION WHERE OUR 20 METRE RELAY OFFICER CANNOT TAKE THE CALLBACKS....IF YOU WOULD LIKE TO STAY ON FREQUENCY FOR A SHORT TIME, COL VK2CTD WILL COME ON TO 20 METRES AS SOON AS HIS 40 METRE CALLBACKS ARE COMPLETED. WE ARE HOPING THAT THE SITUATION WILL SOON BE BACK TO NORMAL, WE HAVE A VOLUNTEER RELAY OFFICER BUT NO WAY OF GETTING AN ACCURATE CAST TO HIM. BUT WE ARE LENDING HIM A TELEPHONE MODEM AND ONCE HE HAS MASTERED THE ART OF SENDING AND RECEIVING FILES VIA THE TELE-PHONE WE SHALL BE BACK IN BUSINESS...

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(2 JUNE - 8 JUNE)

1. SUMMARY

Date 02 03 04 05 06 07 08

ARLD029 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Joe, NJ1Q, Michael, KA2AEV, Dave, N7RK, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral from QST. Thanks to all.

BOUVET, 3Y. UA9OBO, RW3GW and perhaps others, leave Saint Petersburg sometime this month to take part in a scientific expedition to the Antarctic lasting several months. Bouvet is scheduled as one of their stops and landing permission has been obtained. Their call will probably be 3Y/R0FL.

ERITREA, E3. As of bulletin time, there have been no QSN's on Connecticut PacketCluster nodes for Jin, JF1IST, who was to be active through June 11. A station signing E31FAO was posted on the Tokyo PacketCluster which may have been him. E31FAO was heard around 14280 and 21283 kHz between 1300 and 1500z.

GIBRALTAR, ZB2. Dave, N7RK, will be active again from ZB2 June 23 to 30 as N7RK/ZB2. He will be on 80, 40, 30, 20 and 17 meters running 100 watts and wire antennas. QSL via CBA. Note that all QSL's from Dave's November 1994 N7RK/ZB2 operation have now been sent out either direct or via the bureau, depending upon how received.

SAINT PAUL ISLAND. Everything is a GO for this operation slated for July 27 to August 2. Ops AA4VK, WA4DAN, KW2P and W5IJU will sign /CY9 on all bands with CW, SSB and RTTY. Some 6 meter and satellite operation is possible. QSL via WA4DAN.

ANTIGUA. Members of the Frankford Radio Club plan to be active during the CQ WW SSB Contest October 28 and 29. This multi-multi effort will sign V26B. Team members will be active on various bands and modes both before and after the contest period as time permits, using V26B as well as other calls. QSL V26B via WT3Q.

COMING EVENTS

JUNE 10th-11th ANARTS Worldwide Digital
Contest

JULY 2nd DARC CORONA 10m Digital
contest

AUGUST 19th-20th SARTG WW RTTY Contest

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President(Col) VK2CTD at VK2XSB, or the Secretary (Pat) VK2JPA at VK2AAB.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2AAB. Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

A more detailed look at their idea is located in a report titled "The Telecom
Revolution -- An American Opportunity" on the PFF web site.

Tony Salvador (tony@gcr1.com) wrote:
: If you people do not like CW why did you become a ham ?

Hey, if all you want to do is chat/communicate, why did you become
a ham? The internet is a much better medium for this, and cheaper in many
ways.

: It is part of the hobby, like it or not ...

So is FMTV, I don't see many people doing that.

: If we are willing to eliminate CW why not eliminate voice ? I'd rather chat on CW than
: voice ... If digital communications are so great lets all just send messages to each
other
: and chat via packet ? WHY!!! I'll tell you why ... modes that may interest some, blow
: to others ... If you do not like CW just don't get on it ... but leave us CW operators
alone
: and stop F'n with our band width !

Considering you only need the lemon squeezings in VHF/UHF, fine.

My son is coming to visit me for a month in July and I'd like to
put him in a HAM radio course so he could get his Novice Tech license.
I know next to nothing about HAM radio (do all my chatting on the net)
and would appreciate any information on HAM classes a 12 year old
could take in the North D.C. (P.G. County) area.

Many thanks!

> $300 seems to be the going price at the last few swapfests I've been at.

Yikes! If you see an SB 220 for this price with good tubes, get me one.
I see the SB 200 (pair of 572B's for about 600-700 watts output) for $300
at the swap meets, sometimes a little less, but I have not seen
the SB 220 (pair of 3-500Z's for full legal output) go for that
except occasionally. Mostly see the SB 220 for $400 or $450 with
good tubes.

4954. ANNOUNCEMENT: INTERNET FIELD DAY CHALLENGE RULES

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-14 00:00:00 UTC
From: becker@shell.portal.com
Message-ID: <3rn01t$68g@jobe.shell.portal.com>
Source record: 244623

INTERNET FIELD DAY CHALLENGE

The Internet FD Challenge is a separate competition within the existing ARRL Field Day event. This contest-within-a-contest has two objectives for the experienced operator: providing a more challenging contest operating experience combining FD rates with section multipliers, while attracting and training new contest operators by over-the-air example and direct mentoring.

To encourage this mentoring and entice you all to enter, the competition is limited to Multi-Single and Multi-Two categories with extra transmitters allowed if they are operated by new operators in a manner similar to the existing Novice station Field Day rule. Defining who is a new operator is left to the honor system. Basically, if you are a consistent winner, you are an expert operator. We decided not to adopt the rating system described in the May/June 1995 issue of NCJ, but you may refer to it to help you decide whether you are already an expert.

The IFDC scoring rules retain all of the standard FD scoring of QSO points, including the CW X2 multiplier and the power level multipliers. Bonus points are not included. Standard FD logging procedures are used to determine the QSO points, which are then multiplied by the SS style section multiplier to calculate the IFDC score.

To enter the Internet FD Challenge, here is what you have to know and do:

1. OPERATOR CLASSES: New Operators are defined as operators who have never won a major contest award. Expert Operators are those of you who have been listed, either singly or as part of a multioperator group, in QST, NCJ or CQ in a Top-Ten box, or as a Divisional, Sectional or County Leader in SS, CQP and other regional QSO Parties (Novice Roundup leaders are considered new operators). Use your good judgement and remember, we all get to see your choices. You know who you are.

2. ENTRY CATEGORIES: Competition is open to all Class A and Class B groups including the 5W battery-powered option, with no limit to the number of transmitters. (The A and B classes are defined in FD rules, pg. 133, May QST). To enter in the Multi-Single category you must limit yourself to 24 expert operator hours, (27 if you setup after the contest starts). To enter in Multi-Two you must limit yourself to 48 expert operator hours (54 if you setup after the contest starts). For example, you and your regular MS buddy can go out with the local 5A club, limit yourselves to 27 hours each, and enter the IFDC as a Multi-Two. The Internet FD Challenge does not include a Single-Operator category.

Once an expert operator has initiated operation at a transmitter, a minimum of 15 minutes must be logged. Any outside assistance (packet spotting,

etc.) may be used, and the results of a Novice Station as defined in the FD rules may be included in the scoring. Except for SS-type multiplier scoring and limited entry categories, all other ARRL Field Day Rules apply. You must have submitted your regular entry to ARRL.

3. MENTORING NEW OPERATORS: During the contest look for some serious contesters doing serious rates in the usual places, show a little extra patience and QRS when asked. Put in the effort to show the new guys and gals how to log and maximize both QSOs and Multipliers and let them have the operating time to do it. Keep track of your operating hours for each expert operator. You can use the OpOn or Note features of CT, NA, TRLog, or WriteLog to keep track of operating time, and learning how to use the computer is part of training New Operators (See Appendix). It OK to use paper logs and transcribe to electronic form later too.

The participation of one or more expert operators is encouraged but the Internet FD Challenge is open to all operators with no limit on operating time of new operators. Time used by expert operators coaching or assisting new operators does not count toward the expert's time limit, so long as the new operator is doing the operating.

4. SCORING: The Internet FD Challenge multiplier is the number of sections worked; the sixty-nine ARRL sections are listed on Pg. 8 of any QST, and the RAC sections are MAR, PQ, ONT, MB, SK, AB and BC plus NWT/Yukon. Each station can be worked for scoring credit on as many band/modes as possible, but multiplier credit is given for each section only once, regardless of band and mode. (like SS). A Clean Sweep is 77 sections, for which there is a separate award.

The Internet FD Challenge score is the number of FD QSO points multiplied by the number of ARRL/RAC sections worked. FD QSO points are the same as defined in the FD rules: 2X the number of CW contacts plus 1X the number of SSB contacts made on any of the FD bands and modes, multiplied by the FD power multipliers (X5 for 5W battery, X2 for 150W maximum, X1 otherwise). QSOs and multipliers by a Novice Station as defined in the FD rules may be included in the Internet FD Challenge score.

No Bonus points will be credited for the Internet FD Challenge.

5. REPORTING: Make up a summary sheet, showing the number of sections worked and separate lists of new operators and expert operators, with expert operating times identified. Don't forget to include number of transmitters and their power levels, including any novice station. E-mail the summary sheet with the above information to AE0M, at the e-mail address below by midnight, PDT, Sunday, July 2, 1994 (the following weekend).

6. AWARDS: A modest plaque will be awarded to the top scorers in the M/S and M/2 classes. Certificates will be sent to the top-scoring group in each ARRL/RAC section. A suitable trinket will be sent to each group reporting a clean sweep, subject to receiving $5 to cover costs by U.S. mail with a copy of the summary sheet.

A summary will be posted on the contest reflector and a full report sent to the NCJ editor ASAP.

Appendix A
Tracking operator time with Computer Logging Programs

TRLog doesn't track operator time automatically, but there is a feature that allows you to add a note to the log where you can indicate when the operator has changed. After the contest, you just manually tally up the times. (Thanks Tree, N6TR)

WriteLog has no automatic facility to track operator time, but it can be used as follows: Add a column to the log, as you may for any contest in WriteLog, enter the operator start/stop times into these columns and add them up after the contest manually. (Thanks Wayne, W5XD)

CT by K1EA will automatically track your expert operating time. Just remember to do an OPON and enter the operator each time you change operators. CT enters the operator and the time interval in the .OPR file, and then helpfully displays the current operator in the summary window. At the end of the contest just add up the times for the expert operators.

NA has a note function which may be used to track the operator. Do an (Alt-N) and enter the operator each time you change operators. NA adds a timestamp and and stores both in the .NOT file. At the end of the contest just compute the times for the expert operators.

If your favorite is not listed here, you can probably figure something similar out or you can even use paper and pencil.

The Internet FD Challenge rules are the result of numerous inputs from contest club members and contest reflector subscribers, and were developed in consultation with W6QHS and WN4KKN.

*** D.I.P. - Portuguese Islands Award ***

This Award is avaiable to any licensed Amateur/SWL who can produce
evidence of having made Two-Way comunications with a minimum
of 10 Portuguese Islands after 85/01/01.
This Award is available for SSB, CW and Mixed on HF.
Cards not required, only GCR List and US$5 or 7 IRC's.
Endorsements only SASE.
Applications and Info to DIP Award Manager:
CT1DIZ, Jose Alexandre Barbosa, Rua Serra de Baixo, 66,
2726 Algueirao, Portugal.

********** DIPLOMA DOS FAROIS DE PORTUGAL **********
********** PORTUGUESE LIGHTHOUSE AWARD **********

The main objective of this most colourful Award is to work the LightHouses
from the Mainland and Islands of Portugal.
The Portuguese Islands Award (Diploma dos Farois de Portugal-DFP) is
sponsored by the CLUBE RADIOS DO ATLANTICO - CRA.
The DFP program is open to all Licensed HAMs and SWLs, on all bands.
The diferent DFP Awards are divided in: HF (SSB+CW+Mixed) and VHF (Only
Direct, Tropo, esporadic, MS, EME, etc... repeaters and Relays are not
permited).
Only contacts made after 07th December 1994 are valid for the Award.
There are two basic dificult levels and two Honor-rolls on the DFP:
BASIC AWARD: 5 Confirmed QSOs with CT, CT3 and CU Lighthouses.
ADVACED AWARD: 10 Confirmed QSOs with CT, CT3 and CU Lighthouses.
HONOUR ROLL: 25 Confirmed QSOs with CT, CT3 and CU Lighthouses.
TOP HONOUR ROLL: Above 50 Confirmed QSOs with CT, CT3 and CU Lighthouses.
The DFP (Portuguese Lighthouse Award) can be requested to:
CS1CRA - P.O.BOX 118 - 2780 0EIRAS - PORTUGAL
or VIA CT1BWW - MANUEL ALBERTO MARQUES.
When aplying please send a copy of your LogBook with the next QSO
data: Station Callsign, Date, UTC Hour, Frequency, Mode, RST received,
LightHouse Name/Reference and offcourse don't forget to send the QSL Cards,
so they can be checked by the DFP Award manager.
Members of CRA don't need to send QSL cards for checking.
The mailling expenses of the return of the QSL cards send to be checked
by the award Manager are to be covered by the applicant.
The cost of each Award is of US$5, each 10 Lighthouse endorsement costs
US$2, Top Honor-Roll plaque US$50 (More than 50 Lighthouses confirmed).

NOTE: Each member of a Lighthouse DX'pedition qualifies imediatly for
the Basic Award, on the Award will be mentioned " OPERATOR ", the activated
Lighthouse will also be credited for the operator score.

4958. QSL's via Shell Printing

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-14 00:00:00 UTC
From: junger@mtn.er.usgs.gov
Message-ID: <1995Jun14.154524.20433@rsg1.er.usgs.gov>
Source record: 244627

I had some custom QSL's printed up by Shell Printing in Rockton, IL
a couple of years ago and was quite satisfied by the job that they
did and their prices. I need to have some more done, but have
found that their phone is "no longer in service". Does anyone
know of the company's whereabouts? As an alternative, does anyone
have some good experiences with printers of ham-designed QSL's.
My card is just a simple one - no glossy photos, etc.

tnx es 73 - John, W3GOI

BOSTON AMATEUR RADIO CLUB ANNOUNCEMENT

FOR IMMEDIATE RELEASE
FROM: Mike Ardai, N1IST

FOR FURTHER INFORMATION, CONTACT: Mike Ardai, N1IST
n1ist@netcom.com
n1ist@k1ugm
Tel: (617) 254-3420
June 14, 1995

GENERAL CLASS

BARC wil be offering a General upgrade class in July and
August. The class will meet on 8 Thursdays, starting on
July 6th from 7PM to 9PM. We will meet (at least initially)
at the American Red Cross of Mass Bay, 285 Columbus Avenue,
right behind the Back Bay T stop. This is at the corner of
Columbus and Clarendon Streets, and there is a map in the
SPARC (it's where we hold Ham 101).

The class will use the ARRL General Class License Manual
(2nd edition) and will include code practice to help pass
element 1B.

If you are interested in upgrading, or just want to review,
please come on by. Please let me know if you are planning
to attend, so that we will have enough books and a big-enough
room.

(Sorry about the USA distribution; Netcom won't let me use 'ne'...)

>

Brian... You're probably out of luck for a class. The Goddard club doesn't run classes. The Anne Arundel Club in Davidsonville does, but it's multi-Saturday'ed during the Winter. You might check UMd's club at WAM on the net, but I'd guess they're out for vacation. There are other clubs around, and someone else may comment on their training skeds.

The good news: Buy a copy of "Now You're Talking" at any Radio Shack or at Maryland Radio off 198 in Laurel. With your vast knowledge of electronics (and the exam Q&A's in the book) you should be able get him ready for a "Tech" license in short order. There's no morse code reqm't for that class and it will let him operate on the popular VHF on up bands that the amateurs use. Several clubs in the area offer testing on convenient Saturdays all year. And licenses are coming almost instantly (in government terms, of course) rather than the multi-weeks it used to take.

Cheers,
Bob Kirk

If spelling is so important should which language should we use?
If we are using english should the speeling be in :
i) American english
ii) Real English

I use the term real not to offend, England is England and America is not. However the spellings for the same word are quite different between the two languages. A book we get here called Chemical Abstacts comes with a 100 page booklet for converting American spellings (used in the book) to English.

This is a thread I would personaly not normally coninue in this group, but being dislexic (or thick middle class child) I have often found myself in the sites of many spelling zettots; and find them a bit of a raw nerve. I just don't think correct spelling is worth getting an obsession about. Particually on usenet with two radically differant forms of english flying about.

The issue with SCRRBA appears to me not so much to be the closed repeaters as
it is with the reserved frequency pairs.

I agree with the attitude that says if a freq pair is TRUELY unused (as
determined by extensive monitoring in time AND LOCATION) then it's fair game
to be reallocated. If the coordinating body refuses to let go of it, then
the body deserves to be ignored.

D34 indicates frequency band
TSA definines the chassis
and the 3300/1300 indicates if the unit is a tone squelch unit

Check if there is wiring on the switch since dealers are always raping sets
for tone boards. If its there, its the board ahead of the heatink above
the preselector tuning. Check also if the code plug is there. Either
way these baords are expensive aftermarket pruchases from Motorola.

I think I have a manual for a Flexar UHF, same radio packaged as a base.
problem is I moving warehouses and our archived manuals are in
unmarked boxes. As I recall the Maxars were 15-20 watt in the UHF band

These pigs like most Motorola are band split sensitive. I'd love to tell
you that they will work on the band you want but at the moment I can't.

I was given a Motorola CompaStation (a Mocom 70) by a cellular dealer
who took it as a trade. But it won't work on my 149 MHz paging channel
so I had to buy a new transmitter.

>
>Drill the hole and enjoy.

Roof mounting is fine for fiberglass roofs. The worst are John Deere tractors,
they require a halfwave antenna, not as good as a 5/8 wave but it works.
There are a number of mounts from Larsen and Maxrad

Also consider the on glass antennas, Larsen is not too bad, but the best
by customer opinion is the Mobile Mark 1/4 on glass.

Having a roof mount is NOT a trade in asset. Trust me, from thirty
years doing this the next owner will complain that it's the wrong
mount and the cable runs to the wrong place. If you are going to
leave the antenna, assuming it's a 3/4" NMO stlye mount.
Remove the ring and replace it with a chrome or black cap.

>>
>>We are really worrying about nothing. They are not going to do
>>anything about such things. The reason music is not allowed is that
>>they did not want the large bandwitdh it would take. Since all rigs

Music playing was most likely made illegal
to prevent Amateurs from "broadcasting" and thereby competing with the
commercial broadcasters.

The anti-music rule has been around for a Looooonnnnnggggg time and
commercial broadcasters (at the time the rule was made) controlled the FCC
through companies such as RCA and David Sarnov..

I actually think that there is nothing wrong with a little music playing.
Broadcasting is another matter, however.

Greetings:

Here's another warning for you: Don't believe another word you see posted by this individual. He is completely without credibility. I replied privately to his Internet address, requesting an explanation of the above message. All he could come up with is "see the movie." Well, whether I see the movie or not, I believe I'm entitled to an explanation of precisely what he means when he says "No ham will get it."

All I know about this movie so far is that it seems to center around an illicit love affair between a "travelling man" and a married woman. If this is the "once in a lifetime event which no ham will experiance (sic) referred to in the above quote, then perhaps he's right. Since his reply to me did refer to "love" and "sex," I'll have to assume it is, and that his reason for warning hams not to see this movie centers around his perception that hams, particularly those who are happily married, and especially those that may not be, shouldn't see this movie since they, as hams, don't qualify for the kind of "experiance" (sic) depicted in this film.

Has anyone else seen this message and interpreted it as anything other than a slap in the face?

To Mr. Fisher: I hereby demand that you explain yourself. And don't fall back on your previous advice to "see the movie." You explain yourself clearly and to the point...or admit that you gratuitously insulted every ham who saw this message, and offer a public apology.

4968. re: Source for small, shielded, 18-conductor cable?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-15 00:00:00 UTC
From: Michael.Black@juxta.mba.org
Message-ID: <e23_9506150430@mba.mba.org>
Source record: 244287

slovell@u.washington.edu (S. Lovell) is looking for a source
for an 18 or 20 conductor cable which is shielded.The individual
conductors can be 30 gauge or smaller. Flexibility is desired,
and it's for some medical application.

I don't know where you can get such a cable. I'd sort of like
to find the same thing, myself.

I tried making something like a 25 conductor shielded cable, but
by the time it was finished, it had no flexibility at all. I took
some wire that I had at hand (higher gauge, definitely, with quite
thick insulation) bundled it and wrapped it in aluminum foil.
It was a short piece, and wouldn't bend enough for my application,
so I didn't go further with it.

A suggestion I've seen in the past is to use the braid from coax
as a shield. If you can get the center conductor and insulation
out of the braid without corrupting it, the idea should work.
Especially if you were using a large diameter coax and the
individual conductors were small enough.

This was something I was trying to do cheap. I know my attempt
would have worked better had I gone and bought some smaller
diameter wire, and better shield would have come from the braid
from cable. I was trying to make a shielded cable to go between
my Macintosh and the hard drive. I've gotten by without a shielded
cable for the moment, and I'll pursue the idea later.

Your problem probably isn't a matter of saving money, but a need for
the actual cable. I have seen shielded hard drive cables for the Mac
advertised, and they are 25 conductor, about what you need. I've
never checked one, so I don't know how flexible they are, but one
would hope it would be. If you could live with the length, you
might do well to look into such a cable. If you can't find the raw
cable anywhere, you could simply cut off the connectors and use the
rest.

I just remembered that I had seen shielded cable by the foot in a
computer catalog.
Inmac
2135 Meadowpine BLVD
Mississauga, ONtario
L5N 6L5
1-800-567-5992
1-905-826-1292

Remember, this is a Canadian firm; I thought Inmac came from the
US, but I am not sure. I am sure there are similar places in the
US.

Anyway, this place lists 25 conductor cable by the meter, with
two different configurations of shielding. The gauge of the wire
is a bit bigger though.

EIther this place or a similar place seems to be the place to look.

4969. CW is here to stay !!

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-15 00:00:00 UTC
From: hduff@humnet.westonia.com
Message-ID: <7887-198049203@humnet.westonia.com>
Source record: 244288

TO: Jim Cummings
This is in reply to your reply to my reply...I didn't want to waste more space with the previous pages to this chapter.

1. I didn't imply that CW itself avoids interference or carelessness, it is the higher level of competence gained thru the additional testing. CW just happens to fill this need (still) until something that may be more relevant can replace it.
2. Regarding your suggestion that CW is not relevant in the 90's, what do you suggest should replace it to uphold the required amount of testing that should be maintained to yield competent operators ?
3. Your silly analogies of Doctors and rags or cars and buggy whips are totally out of context. Contrary to the "CW is outdated and old fashioned" rumours, CW is STILL very useful (and used) in many facets of the hobby. EME, weak signal V/U/SHF work, satellite ROBOTS, Identifiers, QRP CW fun and just plain good old HF CW on all bands ! Sure, whips were used for horse buggies...but never for cars. CW has always been a part of Amateur Radio though other forms of communication were around before radio.
4. RE: The big manufacturers lobbying the governments to make changes... I recall reading such sentiments in the front of QST some years ago. Of course, I cannot produce it for you now...in retrospect, I should have kept the clippings.
C'mon Jim...you choose not to believe that they had a part in padding the hands of the lobbiests when no-code licencing was being discussed ? What cave are you living in ? Do you think no-code licencing was all the doing of the FCC and ISC without pressure from outside groups ? You had better believe the Big-3 had their say !!!
5. RE: my sadness of the technical element of Ham Radio (it's roots) being lost...you reply.."So what? That has occurred despite the changes to the examination process, changing it is not going to get us back to the "good old days".
Agreed...Sad but true ! I'm into the hobby for the technical aspect and I guess I'm bothered by the fact that the flood of new hams is not bringing with it a proportionate ratio of "techies" whom I could share interests with.

My 'other problem' is that I had to EARN the HF privledge and feel that what is being asked in testing (including CW) is not too much to ask for the privledges given. This is not to say that "I had to learn CW... so should you". I simply believe that that same stringent requirements placed on me should be continued whether or not CW is part of it. I suppose that a replacement for CW cannot be formulated at this time and since CW is still used in Amateur Radio, it continues to serve its function as a competence level filter.

Again, I refuse to believe that any advocate to ANTI-CW testing for HF has absoultely nothing to gain, notwithstanding the folks who want it without having to EARN it. For those of you who insist...let's hear the suggestions of what should replace CW to maintain the current level of standards for operator comptetence.(Spare me the "...competence??? Have you listened to 20 meters lately ?... garb. There will always be bad apples in the bunch.)

The nice thing about amateur radio is that we have all kinds of folks,
with all kinds of opinions, interests, abilities, and desires.
Additionally, another nice thing about amateur radio is that if you don't
like what I like, well, you can go fly a kite or chat with the buddies on
the local 34/10-4 machine while I diddle my touchtone pad on the HT to
talk to Bora Bora on 20m while I'm out riding my bicycle.

It matters not what YOU think is the best use of the available spectrum as
long as I'm operating within the rules and local conventions.

Well, admittedly a GE Mastr II converted to repeater service is hard to beat, but a new Motorola Radius repeater isn't bad either if you prefer to just buy a new repeater rather than cobbling one together from old taxicab units.

You can't simply ignore the ones that are operating. They will still be there if open systems are coordinated on top of them. They will have every right to complain to the FCC when they are interfered with, and they will have no reason to cooperate with the new frequency coordinating group. Any group that replaces SCRRBA (or any other coordinator) MUST take into account the existing systems. Period.

Paper systems are different. There's no one to interfere with. However, the closed systems DO EXIST, and no change of frequency coordinator will make them go away.

Well actually I meant here that the monitor would have to move around, not
just monitor from one spot. Maybe in the case of the LA basin, multiple
monitors scattered around.

But yeah, you bring up another valid point. Coordination records should be
public, since it's a public resource that's being coordinated.

: --
: ...phil (kb8uoy)

Maybe so, but for many trustees, the _exact_ location of the repeater is
something they would prefer to keep quiet/unknown to the public. Sometimes,
a site owner will get many calls for "me toos" after granting permission
for one amateur radio station.. and the result is that none are allowed
on the site. For most purposes, the county or large town/city near the
repeater is sufficient.

Also, control channel frequencies are "secret". Sure, it's somewhere b
between xxx.xx and yyy.yyy, but why make it easy for the malicious folks?
Right now, they have to try several HUNDRED discreet frequencies PLUS
32 PL tones on each, PLUS guess the Touch Tone sequence. OR, they get
"lucky" and hear the control op transmitting long enough to glean the
3 pieces: frequency, PL, TT. Right now, the odds favor the control op
making a 3-5 second transmission once in a while.. giving the malcontent
the exact freqeuency makes his/her job much easier...

Just my two cents..

I am a poor college student who would like to get active on HF fromy my apartment. I need suggestions...

One thought was a tuner with random-wire. But I have a few questions: WIll the elcheapo MFJ tuner work okay? What kind of wire should I use? How much? (I was thinking about 1/4 wavelength on the band, but I don't know if I am right.) Will it work if not perfectly straight?

Any help at all would be appreciated!

Try sci.electronics or sci.engr and you'll probably get a bunch of EEs,
environmental activists and who knows what to contribute (especially on
the latter group, which has covered the topic before).

gary@ke4zv.atl.ga.us (Gary Coffman) writes:

>As I recall, the Liberty didn't lose its coded satcomm link with

LIBERTY did not have satcomm. They did have TRSSCOMM (Technical
Research Ship Special Communications) which was an EME link with
the Navy at Cheltenham, MD. Also, no AGTR/AGER ever had any direct
links with Langley; in fact, that agency was never involved in tasking for
those ships except indirectly through other agencies.

>Langley, but their frantic messages were mysteriously rerouted to
>the station in Addis Ababa instead of to the proper action agency
>in the 6th fleet. By transmitting in the clear, the Liberty broke

NAVCOMMSTA Morocco received the messages and mis-routed them to
NAVCOMMSTA Phillipines, where communications personnel recognized the
urgency and "flashed" Washington.

>The thing that saved Liberty was violating orders and transmitting
>in the clear directly to the 6th fleet. The modulation they used wasn't
>germane. The mere fact they had established two way contact directly

Well, "Assault on the Liberty" was written by a Chief Warrant Officer
who was on USS LIBERTY during the attack, and he did take pains to
point out that at the time CW was the only mode which seemed to work
through the jamming. And since the 16-foot dish used for TRSSCOMM was
a *big* target and took several hits, I doubt that it was operational
(but I'll check the book on that). Of course, once the jamming stopped
LIBERTY would have immediately switched to HF RATT and probably
either worked COMSIXTHFLT directly or via Fleet Tactical Relay through the nerst(OOPS!)
nearest NAVCOMMSTA.

Remember that, at that time, the vast bulk of Navy comms was via
100 WPM RATT, with 1200-Baud AUTODIN (using an IBM 360-20) being the
"state of the art" and used at only the major NAVCOMMSTAs (this was 1967).
In fact, Satcomm was still in the *discussion* phase as late as 1970
when I was Receivers Officer in Morocco (in fact, I wrote a "position
paper" supporting the concept in the EASTLANTMED area).

DX Bulletin 32 ARLD032
From ARRL Headquarters
Newington CT June 15, 1995
To all radio amateurs

SB DX ARL ARLD032
ARLD032 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

MALTA, 9H. A group from the Dutch Radio Amateur Society, including PA0BEA as 9H3IE, PA3CGX as 9H3ID, PA3BIZ as 9H3ON, PE1KNL as 9H3QH, PA0TPM as 9H3TD, PA3CRA, PA3DES and PE1NWI, will be active June 22 to July 4. 160 meters, HF, 6 meters and working OSCARs 10 and 13, mode B, are all planned. They will monitor 50.110, 50.120 and 144.300 MHz for sporadic E openings. QSL to their home calls direct or via the bureau.

ANGOLA, D2. Valy, D2/YO3YX, has been heard on 18150 kHz around 1508z and 21267 kHz around 1523z. QSL via YO3YU, PO Box 55-36, Bucharest, Romania.

CANARY ISLANDS, EA8. Jean-Pierre is active daily on 30 meters. Check around 0230, 0900 and 2230z. He will be there until June 23.

CHRISTMAS ISLAND, VK9X. Ken, JA1CMD/AD4WF, will sign VK9XH June 23 to 26. He will operate mainly CW on 80 through 10 meters with exciter level power and a wire antenna. QSL to JA1CMD via JARL only, or direct to AD4WF via his 1995 CBA.

KYRGYZSTAN, EX. EX/V31YM is very active on 20 through 10 meter CW and SSB, the WARC bands, and RS satellites. QSL direct to Wilhelm Schommer, PO Box 71, Speicher, 54658 Germany. Do not send cards to his home call address.

FAROE ISLANDS, OY. A mostly Belgian team, including N4XYA, ON4LZ, ON6QR and ON7PC, will be active from the last week of July to the first week of August. They will operate multi-op in the IOTA Contest from 1200z July 29 to 1200z July 30 signing OY6A on CW and

SSB. Before and after the contest they will transmit from a portable station on several islands in the Faroes archipelago. Claus, DK9FE, will be active from July 10 to 27, operating mainly CW on 80 through 10 meters about 15 kHz from the band edge.

EASTER ISLAND XR0Y AND XR0Z UPDATE. Bob, KK6EK, reports the operation for Salas y Gomez, aka SyG, originally to be part of the DXpedition to Easter Island in September, has been postponed until October. This is due to transportation coordination.

Carlos, NP4IW, will lead the SyG DXpedition October 1 to 22. The call sign will be XR0Z. About one week of actual operating will be possible. Please note that SyG counts as Easter Island for DXCC, but will be a new IOTA.

KK6EK will lead a team consisting of K4UEE, XE1XA, AH9B, XE1L, WT8S, G0LMX, KE6QZZ, W4ETO, WJ2O, K0IR, HB9AEE, AA6TT, W3UM, PA0ERA, W8FMG, XE1CI, N1OCS, K9JSC, HB9AHL, W0ZV, plus 6 non-licensed folks, from September 2 to 23. The call sign will be XR0Y.

CARIBBEAN VHF GRID SQUARE BONANZA. From June 18 to 25, several hundred amateurs will be active in the Yaesu DX Caribbean cruise. Operations will be mostly on VHF and UHF. There is equipment for 50, 144 and 432 MHz SSB, including power amplifiers and serious antennas. On June 16, 17 and 18, listen for them from Aruba, FK42. On June 19 and 20 they will activate FK53, 63, 74, 84, 85 and 95 in the Dominican Republic. June 21 features grids FK93, 94 and 95 in Barbados. GK03 and FK93 in Martinique are on tap for June 22. Curacao operations are slated for June 23 and 24 with trips to FK52, 62, 63, 73, 83, 84 and 94. Wrapping up the trip will be FK42 and 52.

QSL NOTES. Mats, SM7PKK, reports that cards for 3D2CT and 3D2CU, Conway Reef, are being printed. Some will be available at the Friedrickshafen, Germany hamfest. He arrives home on June 26 and will start shipping out cards.

THIS WEEKEND ON THE RADIO. The All Asian DX Contest, CW, sponsored by JARL, runs from 0000z June 17 to 2400z June 18, on 160 through 10 meters. Exchange signal report and two digit number for operator's age. YLs may send 00.

The SMIRK QSO Party, sponsored by the Six Meter International Radio Klub, runs from 0000z June 17 to 2400z June 18 on six meters only. Exchange call sign, SMIRK number and grid square.

For more information on these events, see page 113 of June QST.

>for sure; but I have been told this type of criminal use of radio is
>happening all the time in large urban areas on 2 meters.

If the use of radio for criminal purposes offends you, it sure is
good that you don't listen to cellular conversations. Back before
it was a Federal crime to listen to cellular frequencies, I heard
a few where drugs and sex were being dealt. Pretty wild.

I don't listen to CB much, but the little listening I've done
hasn't revealed too much criminal activity. I have heard people
selling power amplifiers on CB, though.

I use 2m in the Los Angeles area in a frequent basis, and I have
yet to hear it used for a clearly criminal act. There is the 435
gang, but you can never be sure how much of what you hear there is
true.

It just isn't as bad as some will say; usually the ones that say
things are bad are the ones that have never been here.

>I think this may
>be one unfortunate result of the No-Code - there are so many talkies out
>there being ripped off right and left. Also I understand a famous mail
>order auto discount parts house is selling 2 meter talkies via mail - no
>questions asked. I think Dana, that if this process of "dumbing down
>radio" is continued into all spectrum areas - we are going to lose the
>whole ball of wax.

I fail to see how making amateur gear more available at better prices
equates with "dumbing down"; that phrase is used so often it has lost

any real meaning. IMHO, people usually say "dumbing down" as a form of vague finger pointing.

>I sorry if that sounds like bashing or somehow elitist
>- because I am not that sort of person.However, I try to be somewhat of a
>realist...at least part of the time!!!!!!

In my experience, most amateurs today are every bit as good as the amateurs I encountered in 1977. I really don't think hams are any "dumber"; I'm not even sure the tests are any "dumber", but I took most of my tests in or before 1980. I've certainly become smarter since then, so I really can't easily gauge the tests today.

Can you shorten your .sig just a little, please?

4995. Simple Beam Heading Software

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-15 00:00:00 UTC
From: Jim Stafford-W4QO <w4qo@america.net>
Message-ID: <Pine.SV4.3.91.950615164747.5453A-100000@atl1.america.net>
Source record: 244510

A few years back I found a short basic program that would compute beam heading and distance between two grid squares. I loaded this into my R/S model 100 and it worked fine, until one day I had to reset the computer and it wiped out my program. (No backup of course)

This may have appeared in QEX but not sure. I think it was less than 40 lines or so. Does anyone have any idea where such a program might exist? It would work with 4 or 6 digits. It did not work from V/H coordinates, just grid squares. This really came in handy during band openings on VHF.

Prodigy knows what to do, and they will do it if you complain.

If you simply forward a copy of the article to either admin@prodigy.com or
root@prodigy.com, they will understand.

Should the article continue to be posted, I suggest that you forward
additional copies, say one or two hundred, so that Prodigy will have a
sufficient quantity for managerial distribution.

I have a J-Comm autopatch which I want to hook to my HTX-202.I wired it as in the manual but the HT will not go into TX.The book said Icom & RS are wired the same but the Icom will work.Also I found out by error that my FT-530 will work just fine.I tried another RS but it didn't work either. I called J-COMM and they don't know what is wrong.
If anyone could help me it would be greatly appreciated.Please reply by E-MAIL. Thank you.

Steven J. Crisp (sjcrisp@unity.ncsu.edu) wrote:
: John C. Sanders (sanders@pipeline.com) wrote:
: :
: : All interested in this subject may be interest to know that it will be
: : subject tonight (Tuesday) on FRONTLINE, a very good documentary-type
: : television program on Public Television.

: I hope I have followed this thread properly in an effort to assign
: derision. It appears (and correct me if I am wrong) the expectation
: of Mr. Sanders was that the particular show in question would firmly
: establish a link between EMF and cancer. For those of you who did not
: have the opportunity to view, let me give you some salient details.

: The show opened with a group of women from Omaha who are enraged over the
: numerous "bald-headed babies" in their community, those who are suffering
: from cancers. They put together a cluster map which they claim clearly
: showed a correlation. A novice statistician would immediately recognize
: that the map presented was completely invalid.

: In came Paul Brodeur, a journalist who has written extensively on EMF and
: cancer. He vehemently claimed that study after study indicates clearly a
: definitive link to cancer from EMF exposure.

: That position was firmly backed-up by a one David Carpenter, a public
: health official, who stated that "I really feel that people are dying"
: from electro-magnetic fields.

: The televised report continued by showing a vast amount of research
: involved in this question. In most studies, there is *no* correlation at
: all between EFM and cancer. Of those that are slightly correlative, they
: have major statistical errors which are apparent to anyone who
: understands rudimentary statistics. These studies included controls for
: reproduction, gross morphology, oncogenes, and immunology. All were
: firmly negative.

: After an overwhelming amount of evidence was presented negating all
: beliefs in EMF-cancer connection, Carpenter stated that "There's too much
: smoke here. There's got to be a fire."

: Brodeur chimed in with this lovely quip: "Who says that the low
: frequencies [referring to EMF] do not act in another way to induce
: cancer?" That type of response is a classic hallmark of pseudoscience.
: 'Well, we can't prove it, but it still must be true. We just don't know
: how it works so let's speculate then advance that speculation as fact
: until proven otherwise.'

: Well, folks, that is how junk science works. Those who espouse a
: particular position raise a stink - many times using the court system as
: their public venue. Then they claim that a substantial disagreement
: exists in the scientific community concerning the issue. They don't tell
: you, though, that they are the ones causing the stink.

: The EMF situation is pseudo-science at best and fraud at it's worst. This
: is one of those issues where it pays to follow the money trail. See who
: stands to gain the most. The trail leads interesting places.

: And, BTW, those women from Omaha whose children are suffering from
: cancer? After they "conclusively" proved that the power lines near their
: homes caused cancer, did they move? Uh, no.

Maybe looking at it from a different perspective will help...

[parable mode on]

Its a fine Saturday and you and the family decide to go down to the local park for a picnic. You go out and get all the fixings for a FB picnic, load up the car and head out. You get down to the park and find its a beautiful one with baseball diamonds, tennis courts and, of course, picnic tables.

You unload grandma and the kids and march on over to a vacant table. When you get there you notice that the table has a plaque on it with the following words: "This table for the exclusive use of Joe Smith and his friends." You then go from empty table to empty table finding similar notices on each one. Peeved, you set up your picnic on the ground near one of the tables... Only to have Joe Smith come up and say "I not only have rights to the table, but also the area around it. Leave or I will call a cop."

Monday you call up your local councilman to complain about the treatment you received at the supposedly public park. The councilman explains that there is nothing he can do. When the park was built, the city didn't have money to put in picnic tables. The city allowed the people in the area to put in their own picnic tables if they wanted them. Because they were there when the park was built, they had first call on the picnic bench sites. And no you can't build one of your own, because the park already has enough picnic benches.

[parable mode off]

Just how long do you think this city council would remain in office? Unfortunately, we don't even have the option of voting out the frequency coordinators. IMHO, the public park concept may be the only way we will be able to hold on to our current spectrum. Just like government entities provide open space for recreation, so the Federal Government should provide spectrum for recreational activity. Most of our other justifications are pretty weak.

5009. Re: NEED HELP! Respond : Grounding 'Experts' !

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-15 00:00:00 UTC
From: tvr@cnmat.CNMAT.Berkeley.EDU
Message-ID: <TVR.95Jun14220209@cnmat.CNMAT.Berkeley.EDU>
Source record: 244524
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.digital.misc

I found a defective outlet, but along the way I also found some other things that made me shudder - in the first receptacle along the wiring path, I found an exposed neutral wire that broke when I examined it. Having repaired that, I was hoping I was done, but no such luck, the next outlet on the string had 2 outbound wires from the outlet box, and there was *no* safety ground wire connecting to the duplex receptacle and the safety return wires were not adequately connected together. Correcting the open ground wire condition finally lead me to the culprit receptacle on the rear deck.

What is my point? Simply stated - trust nothing until you have checked it out. ...

Right! Folks, (if you haven't done so already) get yourself what some of us in the computer business refer to as a "Win-Lose" box. You plug it into an outlet, and two out of three lights will light up at the same intensity if things seem to be wired right. It's not perfect (my own apartment fails in an odd way, which i recognized by slightly dim light, which i know is hard to fix, being old enough to be pre-conduit), but at least you will know what you're up against. Likewise, if you're moving into a new building, do yourself a service and go around checking every outlet so you find out while it's still easy to fix.

BOETCHAJ@CNSVAX.UWEC.EDU wrote:
>I'm sure there's a code somewhere that makes bonding your RF and AC grounds
>together illegal but I'm not that well versed in electrical code.

Although it may vary from one municipality to another, modern wiring practice requires that the house ground be connected to earth by the installation of at least one ground rod. Therefore, if earth ground is RF ground, the two are already bonded together for AC purposes.

>It is, however, a bad idea in my opinion. Bonding them together potentially
>makes your shack a conduit between the two in case of a failure in one system
>or the other.

In cases where an RF grond is required, there is no choice - the RF ground cannot be separated from the house ground unless all equipment in the shack uses 2-wire AC connections.

I will point out (again) that operating this way can be extremely hazardous due to AC leakage within the equipment. Without a common AC ground, any failure in the bond between the individual components can cause full AC line voltage to appear between the unconnected chassis. The current capacity of this voltage will be limited only by the internal leakage capacitance of the equipment.

In situations where an internal AC component shorts to ground, the situation is even more hazardous. Operation without a third-wire ground removes the current path to ground, and equipment fuses may not open as a result of the short. Therefore, the chassis will remain at full AC potential, with no immediate indication to the operator that anything is wrong.

In summary, all equipment should be securely bonded together and all line plugs should be the three-wire type, with each ground wire firmly attached to the chassis of its respective component. The RF ground, if required, should be connected to the equipment at only one point, in the manner previously described in this newsgroup by Gary Coffman.

>is $7.00 per year, or $70.00 for a 10 year license.)

I know you posted this to be helpful, but the new rules aren't a blessing for everyone, Hans. In my case, my original WA3 call was taken away and replaced with a WB5 after I moved south in the early 70's. I despised the new call, but finally upgraded in 1989, which made me eligible for a 2X1. Shortly after, I moved back east and applied for a new callsign.

Now, the fact is, I would gladly give up my present 2X1 call for my original 2X3. However, thanks to the new regulations, I would be required not only to pay the FCC to reinstate the same callsign they forcibly took away, but to pay for it the rest of my life. There is no hope of ever regaining my old call under the same structure of free renewals with which it was originally granted, or with which I am presently licensed.

As a result, my old 2X3 call (which no one else will ever want) will remain unused, while my more desirable 2X1 call (which *I* don't want) will be unavailable to anyone else.

Good deal? Not to me.

FOR SALE INTERMOD FILTER (ATTENUATOR)

The Attenuator is a specially designed filter for use with Handheld Radios or Mobile Radios. It is perfect for HT with mobile or base antenna that has a lot of intermoduration. This Attenuator removes intermod signals such as another repeaters, pagers, or cellular phones. There is a sensitivity adjustment allowed local noise level to be virtually eliminated. Unit installs between antenna and receiver. Automatic bypass when transmitting (up to 50W). Requires 12 VDC.

Hams have no bedroom activities.

The mike is a subsitute.

5023. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-15 00:00:00 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-803214004@gonix.com>
Source record: 244571
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.14 06/14/95 23:45:31
Changes: Added new FTP and WWW sites
Posting-Frequency: posted on the 1st and 15th of each month

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse- click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under
the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port
5555 (if the standard Gopher port of 70 was used, the ":5555" part
would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with
callsign.cs.buffalo.edu via non-standard port 2000 (if the standard
Telnet port of 23 was used, the ":2000" part would be replaced by
":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from
your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all
http: URL's in this directory also have corresponding ftp: or gopher:
URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all
URL's through the Lynx WWW client, any referenced documents external
to this document are subject to future changes beyond my control. In
addition, with networks and their administration being what it is,
many services with up-to-date URL's may be temporarily unreachable.
Please consult with your local gurus, consulting staff, or help-desk
to confirm that it's a non-local problem, then ask the Elmer him or
herself (me in the case of URL's which appear outside of individual
entries). The currency and accuracy of URL's should be at least no
worse than that of the Elmers entries themselves (which are each
individually confirmed by me every 2 years, and updated within 1 month
on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.

Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament

about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]" and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly to keep both parts under the 64K message limit for Usenet requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles)

in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/

gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW sites:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers/top.html
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html

The advantage of reading the Elmers list at these sites via WWW client
software is that all URL's are converted to hypertext links.

see also the newsgroups under comp.infosystems.www.* (I haven't listed
URL's for all of the newsgroups under this hierarchy as there are now
about a dozen of them (!!!).)

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

First, don't get bent out of shape until you find there is a problem.
Second, build your own serial cable with only one end of the shield ground
connected.

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Gee Burt,

You really must get out more. Your fantasies about a group of individuals bedroom lives really is a true psychological indicator. After all, wasn't it Freud who said that we fantasize about those things we are unhappy with ?

And your contention can be easily disproved by the number of harmonics there are in the world.

BTW, Burt, I can't even imagine what your vision is with this mike subsitute thing. ???? Oh well, I guess as a ham and MORE IMPORTANTLY a husband and father, I have no need for such wild fantasies myself....

Is there a newsgroup more suited to the discussion of the effect of living close to power lines? If so can we cross-post and move the discussion there? I live within 300~400 m of three sets of lines. 2 of these are the local company's lines and the third is the national grid 330 kV lines.

These lines have been in the (UK) press recently as there is a pub immediately beneath the point where the lines converge. The landlord did a moonlight flit complaining that the fields had damaged his health. In some rooms of the living quarters in the pub the fields were several orders of magnitude in excess of nationally (and US) recommended limits for field strengths. When the new landlord went to court to obtain the new licence to run the pub, the old landlord objected to the licence renewal on the grounds of the power lines being damaging to health. His objection failed, but only because the licensing magistrates (local judges) felt incompetent to judge the scientific issues.

(the pub is called The Sparking Clog!)

More suited to Amateur Radio discussions is the high field strengths associated with amateur stations (or the threat of it to our neighbours). I am concerned about the effect on myself and my young children. When my eldest daughter was newly-born and fast asleep in her cot, I tried to get on the air. As soon as I keyed down, she started crying. The 20 m antenna was in the loft a metre or two above her head. It happened often enough to believe there is a connection.

>good tubes.

The key is the condition of the tubes. I have seen SB-220s going for $450-600. Remember that a new pair of Eimac tubes will easily run $300+ so a $300 bargain with soft tubes may not be that much of a bargain by the time you put new tubes in it.

Yet, if the tubes have not been abused, they should be OK. My 20 year old SB-220 had pretty heavy usage during the first 10 years of it's life yet it still has it's original tubes in it and I would guess that it still puts out better than 90% full output... or more.

I plan on hard wiring a generator into my new home for emergency power incase of an outage.. Below is a list of general specifications that would be desirable. What I am looking for is brand name recommindations <with contact telephone numbers or city> and also any comments that you may have from expearance with generators.

* 7,000 to 15,000 watt range
* Propane, I plan on burying a 1,000 gal tank
* 240 VAC <will be hardwired into house via transfer switch>
* 1800 RPM
* Electronic Ignition
* Electronic Governor

I am looking for the latest state of the art equipment. The only generators that I have seen are Onan's. There Marquis 6500LP generator looks nice, but it is designed for RV's and does not have 240 VAC. I have rulled out Onan's 7.5JB, 12.5JCA, 15JCB generators because they were desinged in the 1940's and have been discontinued from production. They are not state of the art and there is no replacement models available from Onan.

Thank you, Larry AE4FV

Erich is, of course, right on the money. One of the many disservices inflicted on the amateur radio community by terrible groups such as SCRBBA is that they cause us to underutilize our assigned bands. This in turn can lead to encroachment from competing radio services. Remember Ralph Haller saying a few years ago that we had "excess capacity" on our bands and therefore we should be permitted to use it for business purposes too? That's exactly the danger we face when a huge and valuable band like 440 lays fallow due to SCRBBA's wretched management.

Their legitimacy should simply be repudiated, open repeaters coordinated, the present closed and private repeaters ignored.

Just a reminder that use of NON-type-accepted equipment on the 156 MHz
Maritime frequencies is a violation of Part 80 of the FCC Rules. This will
put both your amateur and marine licenses in jeopardy. You can buy a LEGAL
marine radio and then add (preprogrammed) ham frequencies, but you can't go
the other direction. The USCG 9th District confiscates both unlicensed and
illegal radios during their routine safety inspections.

>Thank you, Larry AE4FV

Larry,
In my experience in generators and UPS systems there are a few things to remember. The most important is quite obviously the output rating. It will usually take 3kw rating to start a 3/4 hp (~560 watt motor) motor reliably. Some (most) of the newer design motors and generators have gotten away from this problem. One area also to look for is redundancy. My generator, a Dayton generator unit (4.5kw) coupled to a 8 horsepower Briggs(actually a little small for full load operation), now has a modified head to allow 2 sparkplugs. A storage case is mounted to the unit with a spare ignition assy., carb parts, fuses, and the tools needed for the jobs (with a manual for the unit).

I have only had to use it twice and both times were due to a flood caused by a creek that overflowed its banks at my mom's house and took the power out by way of vehicles intercepting power poles on the side of the road. Whatever unit you choose be sure to buy a group of spare parts and dedicated tools for the unit.

FWIW,
Mike KB9KFE

>As soon as Israeli COMINT monitors realized that LIBERTY had gotten
>through with a successful call for help, they broke off the attack and
>"offered assistance."

As I recall, the Liberty didn't lose its coded satcomm link with
Langley, but their frantic messages were mysteriously rerouted to
the station in Addis Ababa instead of to the proper action agency
in the 6th fleet. By transmitting in the clear, the Liberty broke
standing security orders. I also understand that the 6th fleet's
fighters were *immediately* recalled on order of Washington moments
after they had been launched. It was quite clear that elements in
Washington (and Tel-Aviv) knew what was happening all the time.

The thing that saved Liberty was violating orders and transmitting
in the clear directly to the 6th fleet. The modulation they used wasn't
germane. The mere fact they had established two way contact directly
with a combat capable force was what saved their bacon. The Israelis
were willing to attack a basically unarmed US Navy ship for political
purposes, but they weren't willing to tangle with a fleet air arm.

>Air Force Base in Georgia received orders from higher headquarters to reinstate
>training recruits in its (CW) use. It had been dropped years earlier, replaced

>by new, more exotic communication modes." (From "Morse Code: The Essential
>Language" , 1991).

It's clear now that O'Grady neither sent nor received manually encoded Morse during his time in Bosnia. His beacon transmitter sent an automatically generated Ident code, which may have been MCW Morse, or some other encoding not specified by the Air Force (they would neither confirm nor deny when I asked what coding is used). All of O'Grady's "live" communication was conducted by UHF voice. Neither of the radios he is reported to have had in his possession has a BFO, or HF capability.

The older survival transceivers, using miniature pencil tubes, and a separate A and B battery, of which I have an example, don't have a BFO either, though they do have a push button that can be used to modulate the AM transmitter with a tone. The PTT locks to select one of two frequencies (121.5 MHz or 243 MHz), and can't be used to send CW Morse.

These survival radios are obviously intended to be used by aircrews with little or no radio training. All the details needed for operation are printed directly on the face of the radio in very simple non-technical terms.

The 5th Combat Communications Group (which has among its duties some SIGINT functions, though their primary function is forward ATC) does receive Morse familiarization training to this day, but AF pilots do not. They still read the MCW dots and dashes of airway beacons right off the aero chart just like civilian pilots. I got that straight from the Warner Robbins PIO.

During the Vietnam War, some of the aircrew POWs may have incidentally known the Morse Code, but obviously not universally since the "tap code" they used to communicate with each other in the Hanoi Hilton was based on the very basic "one tap for A, two taps for B, etc" method.

Heavy bomber radio officers were trained in Morse up through at least Korea, but I'm not sure fighter pilots got Morse training even in WWII. My uncle Doc flew P-47s in the ETO until he lost his left arm to Jerry, and I know he didn't know Morse. (I asked him to help me learn it for my Novice license.)

MARINE RADIOFAX SERVICE ANNOUNCEMENT

The President's budget proposal for fiscal year 1996 includes reductions in the National Weather Service (NWS) funding which will result in eliminating the transmission of weather charts to marine radiofax broadcast stations on September 30, 1995. If Congress accepts these proposals, the weather charts produced by the NWS will be made available to maritime users only through private weather information services.

The Coast Guard is determining how this proposal will affect broadcasts of weather charts from Coast Guard stations NMF-Marshfield, MA; NMC-Pt. Reyes, CA; and NOJ-Kodiak, AK after October 1, 1995. A similar determination will be made by the FAA for station KVM70-Honolulu, HI. Private marine radio stations WLO-Mobile, AL; WLC-Rogers City, MI; and any other private marine radio stations may continue or begin radiofax broadcasts after September 30, 1995 by obtaining charts from the NWS at no cost to the government. Further notices will be issued as more information becomes available. If you have any questions, please contact the NWS Office of Meteorology (W/OM), 1325 East-West Highway, Silver Spring, MD 20910.

-- Official announcement of the U.S. National Weather Service, for release on June 12, 1995 (amended June 14).

Whoa

I'm a ham, and I most certainly "got it". Better yet, I've even, to put
it in your eloquent learned teachers english, "experianced" it.

>whole ball of wax.
>
>I fail to see how making amateur gear more available at better prices

>
first - tnx for advice on sig. I think you are probably right about that.
Since I am new to all this internet stuff - well I just went hog wild.

On the gear availability - wrong!! - Imho - I think proof of lisc.
should be shown. Over here Dana, even the Radio Shack guys will not sell
a HT unless you can show a lisc. - at least the first time. Transmitting

on the amateur bands is a earned privilege imho, not a God given right.

I realize this will never happen on any large scale - but in principle,I
think it is a good idea.

N1msv (reshaped sig. later) ;-)

5045. 19" Rack Enclosure Info?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-16 00:00:00 UTC
From: "Alan K. Adamson" <ne1h>
Message-ID: <3rshc7$9vv@wa4mei.radio.org>
Source record: 244297
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

All,

Does anyone know of some sources for 19" rack enclosures, not the really pricy one, but something more appropriate. I have the SESCOM catalog, but they have a 1 month back log, I need something a little quicker. I want to pay roughly the same price as the SESCOMS, like $45 for a 19x7x3.5.

Any info would be appreciated.

please post and email to ne1h@tornado.ne1h.radio.org

Thanks,
Alan Adamson

: will be happy to tell you all I know!

Bob I have both an RLC1 (now a spare) and an RLC4 pretty happy with both.
They're working on some bugs we found.

Leon

5047. Help! Trouble getting Stealth Tuner to work on some freqs

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-16 00:00:00 UTC
From: dfjenki@ibm.net
Message-ID: <ZfMulaNLbn$0079yn@ibm.net>
Source record: 244299

I built the Stealth Tuner shown in the June QST. It works great on 80 and 40, but at higher frequencies exhibits the following symptoms:

1) In operate mode, the forward power is reduced significantly. I wonder if this is an accurate represetnation of actual xmit power, or simply an artifact of the introduction of another device in the transmission system?
2) In tune mode, tuning for a minimum deflection of the Stealth's meter does not result in transmatch setting that gives lowest SWR when in operate mode.

Rig is TenTec Argo 509, trying to run at 5W.

Has anyone else built this device? Any problems? Tips? Any hints as to what area I might investigate, and debugging methods I should use?

Thanks for your help.

In article <3rq1ko$ctk@uuneo.neosoft.com>, jreese@neosoft.com says...
>
>In article <3rpgtv$mk5@usc.edu>, Any group that
>replaces SCRRBA (or any other coordinator) MUST take into account the
existing
>systems. Period.

Golly Jim. That "PERIOD" sure settled the matter for me. Glad you put it there. :-) Otherwise, I might have thought there was room for discussion on this point. Guess not though.

All the weenies have to do is put a CTCSS encode/decode in their machine, and they can coexist, usually. This is done, for example, with the Oat Mtn., Flintridge, St.Augustine trio of repeaters on 2meters, and it works great.

>
>Paper systems are different. There's no one to interfere with. However,
the

them
>go away.

No. They'll simply go away as the trustees die off. (Ever been to a SCRBBA meeting? Me either, but those who have tell me the day is not far off for a lot of them). But they won't be able to "sell" their coordination to others.

I read in a 73 magazine review a couple of years ago that the Icom W2A dual-band HT could receive AM aircraft transmissions. I've yet to receive an aircraft transmission on my W2A. Is the sensitivity just really poor at those freqs, or was the writer of this review mistaken?

tnx de KB2PWM

If I understand correctly, the question "is what is wrong?".
Unfortunately, what's wrong is that it was made for, and sold by, Radio
Shack.

The ARRL has a grid squares booklet with maps. In the copy I have (which is a couple years old now) there is a listing of the BASIC code you're looking for. I think the ARRL charges $1.00 for the booklet.

I'm sure there's a ftp site that would have it too.

>through companies such as RCA and David Sarnov..

It wasn't quite that long ago, in the early 1950s, at the same time
that HF duplex operations were outlawed and RTTY was forced to use
a narrow shift. The commercial broadcasters were very healthy by then,
and didn't fear the competition from amateurs. The main reason the rule
was passed was that Dxers wanted to use the frequencies for their postal
card collecting activities. They pushed the ARRL to push the FCC to
outlaw those non-Dx uses of the HF spectrum.

Say - does anyone know if these folks still sell after-market crystal
filters? ICOM Kenwood and YAESU seem to be up in the $110-150 range
these days, and most of us want a good 6 or 8 kHz AM filter and
a 500Hz CW filter without adding 20 or 25% to the cost of a new
rig!!

I am looking at buying a FT-840 soon, and want to avoid paying
through the nose for stock filters if I can.

Anyone have any ideas?

CSTW>Just a note....I have found some second hand filters for the Kenwood
CSTW>940 made by IRCI. I called them to see if I could get the paperwork
CSTW>- it should be a one or two page sheet (that is what they provide for
CSTW>the ones I got for my TS 440). They were very rude and just didn't
CSTW>want to send me the 2 pages since I had bought the filters second hand.
CSTW>The woman on the phone continued to complain about how hard it was
CSTW>to do the copying AFTER I offered to pay whatever it cost! After
CSTW>a few minutes of MY long distance day rates from CA. to FL. I gave
CSTW>up and decided to try here.

CSTW>Wow.

CSTW>Anyone have the instruction sheets for installing the matched 400 Hz
CSTW>CW filters inside the Kenwood 940? I also have the AM filter, so if
CSTW>anyone has that sheet I could use a copy of that one, too.

CSTW>IF anyone needs the paperwork for the matched SSB filters for the
CSTW>Kenwood 940 or the 440, I would be GLAD to send you copies, as you
CSTW>might not get them from IRCI!

Very late my claim of the scores in the CQ WPX CW. Mine was so small
that I did not care to inform you, but now I see I am number 1 in my
class (in the claimed scores list that is). My claim is :

CQ WW WPX - CW
10 meter, non assistent, low power
110 QSO 124 points 81 prefisex = 10.044 points

Just heard something on 10 and started to join in. My childeren were using
the computer so all QSO's were hand made (by keyer, logpaper, and dupe check
paper). All in I was about 6 to 7 hours around the tranciever.
Rig is a TS830 and a TH3jr with a broken 10m trap so the tuner corrected this.
QSO's were mainly via sporadic E with some nice African DX (TU, 5T ...).
The best catch was on 2 meters this weekend with CT an SV as new countries,
both at almost 2000 km.
All the best in DX-ing 73!
Anton ON6NL

Have you tuned into the "reverb net" on or about 3.885 mHz at night, usually
after 10:00 pm EST. It's a group of W1s, W2s and W3s.

It's hams emulating CBers! It is *VERY* funny. Some people actually
have fun on Ham Radio.

Nothing at all wrong with a bit-o-fun.

I'd stay away. From a strictly radio standpoint, you will probably
experience power line noise, if not now, at some time.

I chase interference for the local power company from time to time. The
worst ones to find are the failing insulators on the big lines. THe
interference can propogate many miles along the lines.

Also, if the lines are carrying a very high voltage, you will notice a
constant background white noise from the corona effect.

Just because you don't hear anything on the broadcast band doesn't mean
that you wont hear something on other frequencies.

I use a VHF receiver when I chase down the noise because I can use a very
directional antenna.

Try three quick Ctrl-C within 1 second. That's the factory default on the PK-232 and I believe the PK-88 has the same default. NEVER short the Lithium battery, just unplug the PK-88, remove the memory jumper, and wait 30 seconds before plugging the AC adaptor back in.

: that not true? If the numbers were reversed I might believe it, but this
: does not seem right...

Hey! I don't make 'em up. I just report them! 8=)

That info came from a file that I maintain. The data comes from
various sources (rec.radio.swap, the boatanchors list for sale posts,
hamfest sightings, etc.. The prices reflected are the "asking"
prices. I can't talk abou 221's too much, but the 220 data reflects
what I have seen at recent hamfests, also.

IMHO, despite the loss of functionality in the SB-221, they will still
fetch a higher price than the SB-220. But, if I were in the market, I
would be more interested in the 220.

BTW, I am always interested in more data, especially from hamfests.
So, I would appreciate reports of items that you see to include
condition and asking price.

Larry, KQ4BY

5066. GB2RS News 18th June 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-16 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <803350390snx@llondel.demon.co.uk>
Source record: 244318
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 18th of June and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First the headlines:

The new Bletchley Park Rally is this weekend;

This year's HF Convention features a DXCC QSL check facility;

And more Sporadic E is forecast for later this week.

The RSGB Bletchley Park Amateur Radio and Computer Rally is held today, the 18th of June, at Bletchley, Buckinghamshire. It features a trade show, special interest groups, bring and buy sale and lectures. The event is coupled to the Bletchley Park Trust which is home to a museum of radio, computers and cryptography. Other attractions include displays of vintage vehicles, Churchill memorabilia, crashed aircraft, firearms and a museum of toys. Morse tests are available on demand but remember to bring two passport-size photographs and the test fee. The event is open from 10.30am to 5pm.

The RSGB International HF Convention takes place on the 9th and 10th of September. For the first time ever in the UK, those attending the Convention will be able to take advantage of the ARRL's DXCC QSL card checking facility. If you do not want to trust your precious QSL cards to the mail, this is an ideal opportunity to get them checked. Applications must be accompanied by a completed DXCC form which is available by sending a self-addressed, stamped envelope to Marcia Brimson at RSGB Headquarters. The address is Lambda House, Cranborne Road, Potters Bar, Herts, postcode EN6 3JE.

The STELAR Group will be holding activity days on Thursday the 22nd and Friday the 23rd of June. STELAR - which stands for Science and Technology through Educational Links with Amateur Radio - intends to contact as many amateurs and school stations as possible, from 1700 UTC on the Thursday until 1700 UTC on the Friday. Operation will take place on, or near, the following frequencies: 3.770MHZ, 7.045MHz, 14.165MHz and 21.287MHz. Watch out for GB2HC and GB2SR.

{the following item was scrambled on the disk copy and may be incorrect} Kathy Catlow, G4ZEP is the QSL sub-manager for the new series G0WAA to G0WZZ. Her address is Ballingroyd Farm, Crossley New Road, Cross Stone, Todmorden, Lancashire, postcode OL16 8RP. Meanwhile, Tom Bartlett, G3ITB is the new sub-manager for the G3LAA to G3NZZ series. His address is Yew Tree, 19 The Street, Hardley, Norwich postcode NR14 6BY. Full details of

how to use the RSGB QSL Bureau are available by calling 01707 659015.

Stroud Radio Society is on a DXpedition to Steepholm Island in the Bristol Channel until tomorrow, Monday the 19th. Continuous operation is planned on all HF bands, 6 metres and 2 metres, CW and SSB using the callsign GB0RS.

The Southampton 70cm repeater, GB3NF, is currently off the air whilst a new site is found which will give good coverage to handhelds in the town centre.

The Somerset two metre repeater, GB3WR, is now back in service after a break of two months whilst the antennas were repaired.

Now news of some special event stations at home and abroad:

The Dragon Amateur Radio Club will be operating GB2CPC at Eryri Association's flower festival until Monday the 19th of June.

{the following item was scrambled on the disk copy and may be incorrect} On Sunday the 25th, GB6RS will be operating from the Royal Signals Amateur Radio Society stand at Longleat. Operation will be on 20 and 80 metres, SSB and CW. Details from G0SWY on 01703 323628.

Now some items of HF DX news from the RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From St Vincent, LA4LN will be operational from Wednesday the 21st of June until the 5th of July. The callsign is not yet known.

From Belau, NH6YK will be active until the 25th of August on all bands including 6m and satellites. He has requested the call KC6YK.

From Tokelau, Ron, ZL1AMO plans to be active on Wednesday the 21st and Thursday the 22nd of June.

Next the Rally News:

The Denby Dale and District Amateur Radio Society Rally takes place today, Sunday the 18th at Shelley High School, Skelmanthorpe, Huddersfield, West Yorkshire.

The Newbury Boot Sale takes place today, Sunday the 18th at Acland Hall, Cold Ash, near Newbury.

From Friday the 23rd to Sunday the 25th of June the Amateur Radio Caravan and Camping Rally will take place at Tutbury in Staffordshire.

The Longleat Amateur Radio Rally is held on Sunday the 25th of June. Attractions include 150 trade stands, 20 club stands, a large bring and buy sale and catering. There will also be free parking, camping and caravaning facilities plus an RSGB bookstall and membership services stand. For details contact Gordon, G0KGL on 0117 940 2950.

And a reminder of a rally cancellation:

The Gordon Schools Amateur Radio Club has announced that the North of Scotland Amateur Radio Convention - the Gordon Rally - which was scheduled for Sunday the 18th of June, has had to be cancelled.

Now for the HF contest news:

The Summer 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 24th of June until 0100 UTC on Sunday the 25th. The contest is on 1820 to 1870kHz, CW only. The rules can be found in the May edition of Radio Communication.

Next some VHF contest news: The RSGB 70MHz CW Contest is taking place today, Sunday the 18th. It started at 0800 and ends at 1100 UTC. The rules are in March RadCom.

Immediately following today's 70MHz event, the second RSGB 144MHz Backpackers contest takes place. It starts at 1100 and ends at 1500 UTC. The rules are in April's RadCom.

Also today, the Practical Wireless 144MHz QRP Contest takes place between 0900 and 1700 UTC.

The 432MHz FM Fixed and Open Contest takes place on Sunday the 25th of June from 1800 until 2200 UTC. The rules are in April RadCom.

And now the solar factual data:

The period from the 5th to the 11th of June saw solar activity at very low levels and the geomagnetic field at quiet levels. Sporadic E openings took place particularly on 6 meters. Sunspot numbers remained fairly steady during the period and meaned at 50. Solar flux levels ranged between 79 units on the 6th and 89 units on the 9th, with an average of 83 units. A couple of small and insignificant solar flares took place on the 5th and the 6th. The electron fluence declined from high levels on the 5th to moderate levels for the rest of the period. The X-Ray flux levels varied little day to day and averaged A7.7 units for the period. The 90 day solar flux average on the 11th was 79 units.

Geomagnetic levels remained quiet throughout with the most disturbed day being the 10th with an Ap index of 9 units. The average for the period was Ap 7 units. The aa indices, as supplied by the British Geological Survey for the period from the 30th of May to the 5th of June, declined from sub storm levels on the 30th, with 57.9 nanoTeslas, to quiet levels by the 5th with only 11.5 nanoTeslas. The average for the period was 34.3 nanoTeslas, about K3.

I'll repeat the figures: spots - 50, flux - 83, Ap index - 7, X-Ray flux - A7.7.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 2nd to the 8th of June, increased from 6.2MHz on the 2nd to 7.9MHz by the 8th, with an average of 6.8MHz. The darkness hour lows also improved over the period from 2.5MHz to 3.5MHz on the 8th

and averaged 3.2MHz. The daytime highs took place between 18.00 and 21.00 hours, with the darkness hour lows between 03.00 and 04.00 hours. Sporadic E was reported on most days on 50MHz with an opening on 2 meters also on the 9th. Bartell's rotation starts number 2211 starts on the 23rd.

I'll repeat the figures: highs - 6.8MHz, lows - 3.2MHz.

And lastly the solar forecast.

This week the quiet, spotless side of the sun is expected to rotate into view and therefore solar activity will be very low with solar flux levels declining to the mid 60s. Geomagnetic levels are expected to be mostly quiet, except for the 20th when activity could increase to active or sub storm levels, but should quickly return to quiet levels. Ionospheric MUFs for the south during daylight hours are expected to be about 22MHz. The figure is 19MHz for the north. Due to the expected mag storm on the 20th, ionospheric MUFs may suffer as a consequence. Sporadic E can still be expected, with the best openings possibly later in the week.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Delta and G7 Uniform Romeo series, and Novice calls in the 2 0 Alfa Lima and 2 1 Echo Delta series.

If you are licenced by the FCC, then it is your callsign, followed by the appropriate prefix for the area in which you are located i.e. wa4abc/ve2 for operation in Quebec, /ve7 if in BC.

The frequency of identification should be at the beginning and end of an exchange of communications, and once every 30 minutes, as required.

>From: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

Bulletin 383 EOC Perspectives 2/2. For release 6/19/95

Organization of an EOC will vary, but the following sections
indicate its complexity:

Director, Deputy Director, Liaison, Communications, Operations
Chief, Law, Fire, Medical/Health, Construction/Engineering,
Care/Shelter, Movement, Mutual Aid, Logistics, Plans, Finance,
Public Information Officer, Safety, Purchasing, US Army Corps of
Engineers, and State Military.

The State Radio Officer should have access to the State's EOC.
This, of course, assumes that the Radio Officer has done his/her
job of becoming an integrated part of the State Agency, and that
the State has a viable emergency communications program.

Following the Northridge earthquake California chose to resort to
Regional EOC's to augment or take the place of a State EOC.
Administrative Regional EOC's (REOC) at Los Alamitos, Oakland
and Sacramento handle response needs of six "mutual aid" Regions,
(MAR), each larger than one or more states and just as complex.
They vary in size, terrain and potential problems.

Region Radio Officers serve the REOC in the same way as the
State Radio Officer serves the State EOC when it is activated
to serve the needs beyond that of a single Region. Through the
Chief State Radio Officer they also serve the State EOC for
mutual aid from the counties should that need arise.

In an eight-hundred mile-long state spread over 156,297 square
miles, with a population of 32 million, these Region Radio
Officers fulfill a vital role at the REOC and elsewhere. They
work closely with the Region Communications Coordinator, the
Region Emergency Services Coordinator and other Regional staff.
It's a challenging, but rewarding position. In some states the
State Radio Officer is a paid position. In California the State
and Region Radio Officer position is unpaid, but their
responsibilities may exceed that of the paid position in other

states.
end.

Don't mind this Duffy joker Curtis...he's nothing but a bitter ex-Radio Shack
employee and hence, his opinions mean NOTHING !

If your HT goes into transmit with a speaker-mic then you should be able
to simulate that condition with the controller. You might have to play
around with lower resistance across the mic input/PTT switch.
Hard to say from a distance but it may take a little experimentation.

: capacitive, inductive or a battery. The load could be short circuited
: some times. What extra protection circuits are needed?

: Any relevant comments and suggestions would be appreciated.

: Thanks in advance

: YS Yang
: yang@maths.mu.oz.au

The LM350K (3A Adjustable 1.2-37V TO-3 3 terminal regulator) is both
thermally and current limit protected. However, it is not protected
against overvoltage and reverse current. Thus, you need to put a large
power diode across the input and output (cathode to the input) so that
if the output voltage goes higher than the input voltage, the current
will run through the diode and not the LM350. Likewise, if you use
bypass capacitors on the adjustment terminal, the same type of
protection must be placed. Consult a National Semiconductor databook
to get all the schematics for the LM350.

Subject: Re: ? Open 440 repeaters in SoCAL ?

Roger J. Buffington (buffingt@scf.usc.edu) recently wrote

in <3rk8dk$s9@usc.edu>:

In a discussion about SCRRBA coordinating open repeaters

: My question is: who appointed them king **** of **** mountain? :-)

As long as you choose to not participate in their open meetings, you are

by your lack of action condoning their actions. Does SCRRBA really have a

secret policy and procedure for coordination? Every coordinating body has

a procedure to de-coordinate an abandoned repeater. Follow their

published procedure. Even if SCRRBA chooses to ignore you, you have

followed their published procedure. Document everything. Apply your legal

mind to their procedures. You WILL win your case.

Once you install your two bill open repeater you are at the mercy of

your users ... if you have offended any one in the process ... oh well.

Bob,

As a member of SCRRBA, 220SMA, and TASMA, I can assure you that the problems with the level of service provided by SCRRBA begin with the scarcity of open, public meetings by the organization. The last public meeting I can remember was in November of 1990, and I cannot recall any SCRRBA meeting I have attended going back as far as the late seventies at which elections were held. As for obtaining a constitution or bylaws for the organization, I asked Pagel (N6BVU) and Kelsey (WA6FVC) directly and was provided nothing.

TASMA is trying to operate as an efficient service provider, the 220SMA already is (they are truly a model organization!), but SCRRBA just hides behind a Cactus fence. As an ARRL Vice President put it to me: "SCRRBA exists to provide Cactus with frequencies." That short quote summarizes the situation.

I often go hiking or running where I pass by a 115 KV line, and I have
frequently noticed that I can *hear* the discharge, particularly on a
wet day. I'm sure you can hear it a lot further away with a radio. I
wouldn't recommend buying a house there if you want to enjoy radio
operation.

Now, I can understand that KJFC might be considered a seat of demonic
power, although I didn't think that they had a Wilkinson transmitter.
But I seriously doubt that you will find any Wilkinson or TTC equipment
at the Toys 'R' Us store, which makes me strongly doubt your findings.

Anyone who disputes that the Wilkinson FM-1 is not the work of the
devil hasn't spent a Saturday night rebuilding the screen supply when
the cavity started to arc over.

In article <3rs5db$u2@gaudi.lahabra.chevron.com>,
Curtis Wheeler <cgwh@chevron.com> wrote:

[John Dolan's question about feasibilty of modifying Radio Shack paging system for use in an amateur band deleted]

>Even if it could be brought into the ham bands, what good would it do?
>Amateurs can't engage in one way paging.
>

That's a bold statement to make, considering that this activity goes on all the time. Beyond the specifically allowed CQ and direct calls we also have things like:

Has anyone been written up for transmitting a message like:
"Jim, I know you're probably out of range with that HT by now, but if you can hear me, meet me at ..... This is xxxxxx, clear."
That is absolutely a one-way page, as Jim is not expected to answer. But the originator and the recipient of the message are licensed, the transmission is identified, and the content of the message is allowed under the rules. Other one-way applications are a grey area, but John didn't say exactly how he wanted to use the system.

Many voice repeater controllers can encode tones to activate receive-only pagers, presumably the pagers are carried by members of the club. After the pager receives the tones, it will switch its speaker on and the originator of the page can transmit a one-way message. This feature is often used in the amateur bands.

These fancy repeater controllers have been heard to automatically send messages like "Club meeting Monday at 8:00 PM" Is this not a "page" to members of the club?

On packet (considered by most to be a legal mode of operation) we have

APRS: "This is xxxxxxx. My location is xxxxxx." transmitted periodically, without regard to whether anyone is receiving or not. This type of transmission qualifies as a "beacon station" under the rules. It is not a proposition for a two-way contact.

Other stations: "This is xxxxxx. BBS at xxxxxx-1"
Once again, more than just the ID of the station is being transmitted, the one-way message contains additional information.

So one-way messages are sent all the time in the amateur bands, many of them less-well defined than sending a page to a specific receiver known to be carried by an amateur operator. A blanket statement that "Amateurs can't

engage in one way paging" is hard to justify.

-Mike KD4QDM

By the way, I think the Radio Shack pagers work in the 11 meter band, in one of the 4 or 5 gaps in the original 23 channel allocation (Channels 24-40 are contiguous). These other channels are designated for paging, remote control, etc, although of course they now just contain chatter from far-away bootleggers like the rest of the band. Radio Shack and other cheap R/C models used to use the 11 M band until 49 MHz operation was allowed.

I'd like to know which ARRL officer made such a statement.

If this were true why would SCRRBA bother with all the other repeaters?
Cactus only has 13 radios in all of southern California. Yes, many of
SCRRBA's people are Cactus members, but what does that have to do with their
coordination efforts? SCRRBA may have started with Cactus, but it does more
than that now.

Very true, Hugh.

>Re: Face it in the above parapraph: This guy sounds like Gerry Falwell or
>Pat Robertson. I don't believe anyone has the right do tell the rest of
>humanity how or where the whole world is going. I guess maybe it's an
>indication of the condition of his life at the moment. But that's no
>reason that he should try to convince the rest of us that life's not a
>beach. Speak for yourself, but don't put out a blanket statement
>that's supposed to apply to everyone.
>| John Lundgren

John, Hugh mentioned the words `ham' and `amateur' no less than a
dozen times in his post. His comments center around the world of
ham radio, not the `whole world' has you contend. Are you even
licensed (couldn't find any evidence anywhere in the callbooks)?
If not, why would you even respond to Hugh's *amateur radio*
commentary?

I guess Rancho-Santiago J.C. hires just about anyone these days...

Here in BC just add "mobile VE7" or "portable VE7" after your call
when IDing.

(Use the appropriate Canadian call prefix if you are in another
province or territory)

Easy, eh?

Operators Wanted at W1AW
========================

ARRL Headquarters station W1AW will again operate during
the IARU HF World Championship on July 8-9, 1995. The
station will be manned for the 24 hour contest period by
guest operators.

Anyone interested in operating during the contest period
as part of the guest operating team is invited to contact
WB2DIN to be placed on a list of expected operators.

W1AW guest operating equipment will be used but there is
a need for a medium duty amplifier for 1 station that does
not have an amplifier and also there are only 3 computers
available for logging so we will need another 3 computers
to cover each band.

Station # 1 -- Yaesu FT-1000 w/ FL-7000 amp

Station # 2 -- Ten Tec Omni VI w/ Hercules II amp

Station # 3 -- ICOM 781 ** AMPLIFIER NEEDED **

Station # 4 -- Kenwood TS-950S w/ TL-922 amp

Station # 5 -- ICOM 765 w/ Heath SB-220 amp

Station # 6 -- ICOM 765 w/ Alpha amp (N3ADL)

W1AW has 2 Austin 286/12 computers and a Tandy 1000 TL/2
available for the logging. We will be in need of at least
3 additional computers. There will be no networking of
computers this year to save on setup. Each station will
log individually and logs will be merged later.

While this is a semi-serious event by the operators who
have participated each year, we realize that W1AW is a
bulletin station and antenna layout does cause several
problems with interference. We operate within limits for
the representation of ARRL as a Headquaters Station for
the event.

Anyone interested in operating, donating equipment, able
to help set up, or just interested in watching the whole
operation unfold over the weekend are invited to contact
Bob, WB2DIN, through the following methods :

Telephone -- (908) 363 - 2724
Internet -- HWDX09A@PRODIGY.COM
Packet -- WB2DIN@WT3V.NJ
DX Cluster -- WB2DIN >WB2KXA

: >commercial radios generally work better.

: Well, admittedly a GE Mastr II converted to repeater service is hard
: to beat, but a new Motorola Radius repeater isn't bad either if you
: prefer to just buy a new repeater rather than cobbling one together
: from old taxicab units.

The radios now seem to be the lowest priority when constructing a new
repeater. The two grand goes into the talking controller with voice mail
and autopatch. Lots of beeps and no real receiver. Seems to me the radios
are only there so the computer can be heard. Good duplexers and low noise
preamps are out of the budget once the controller is installed. oh well..

From Tad Cook, KT7H
Seattle, WA June 16, 1995
To all radio amateurs

SB PROP ARL ARLP026
ARLP026 Propagation de KT7H

Average solar flux was about the same last week as the week prior. Solar flux peaked on June 9 at 86. Geomagnetic conditions were very stable, with the A index in the single digits over the past week and a half, and several periods with a K index of zero on June 13 and 14.

Between June 19 and 22 solar flux should dip down to around 65, then climb back to peak around 90 on July 8.

Recurrent coronal holes should cause unstable conditions around June 19 and possible geomagnetic storms around June 26.

: that *supposedly* has one of the toughest inspection teams in the
: area for new structures. You can be certain that I have a task
: ahead of me, and I will not rest comfortably until I have checked
: each and every connection point in the electrical system here.

Imagine my surprise a few years ago when my wife mentioned, off hand,
that one of our wall switches was warm... Turned out that the electrician
didn't like to use wire nuts, and instead had used these little crimp rings
to bond wires together. Over time, any circuit with significant current
would corrode due to the relatively small contact area, which generated heat,
corroding it more, etc. By that time the black tape used to insulate the
joint was toast. Shortly after fixing that box, we got a reminder to check
the rest of the house *now*; a similar junction behind the smoke alarm down
the hall got toasty enough to set off the alarm. I found two others that were
well on their way, and decided to replace *all* connections with wire nuts.

Besides our sleeping better, the lights don't dim as much when someone plugs in
the hair dryer.

Yes they do. But, I have also heard from many sources that their customer
service can be terrible: lengthy delivery, poor problem resolution, and
a generally bad attitude concerning customer calls after the sale. They did
seem rather pleasant when I called to request a flyer, though.
Refer to CSTW's previous post. If you are still interested I think I can
dig up their tel number for you. Let me know.

5103. Re: Music on Hold over an autopatch?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-16 00:00:00 UTC
From: Brad Snelling <snell@community.net>
Message-ID: <3rr8bj$1uc@odin.community.net>
Source record: 244355

Hello music lovers - I have followed this thread for a time, and I've encountered a slightly different twist to the scenario.

Assuming that the "music on hold" is being piped in from your local radio station (which is the case in many situations), what is your obligation as an amateur when the advertisements are played. When paid advertising is broadcasted over your repeater, do you let it play on or terminate the patch immediately?

My opinion is that according to the rules we terminate phone patches when music is played on hold and certainly if advertising is broadcast. I just wanted to jump in and add my frustration as I have heard advertising broadcast a few times over a local repeater in my area. I feel that it is absolutely wrong, but as a new ham in the area I don't want to alienate myself for being a "rules stickler".

Has anyone else encountered the same situation? Brad / KO6LB

> --
> Joe Landis - Systems and Network Manager - North American Drager - Telford, PA
> landisj@nad.com

No, don't bother the postmaster. Not everyone knows that amateur radio
is indeed a branch of the FCC operations for public service.

When you come right down to it, for someone complete in the dark, this is
the news group to post to. rec.radio. - amateur instead of scanner or
shortwave etc.

If you want to bother the postmasters, bother them over something of
substance such as the advertising of hot wet drippy sex numbers or the
make.money.fast thing.

Unless someone knows in advance or lurks here for awhile they are
going to make the same mistake of thinking that the radio means just
that. RADIO.

Thank you, we now return you to your usual spelling nits and code wars.

> exists to provide Cactus with frequencies." That short quote summarizes
> the situation.

That's a real hoot. 220SMA was the model alright. Because of the actions of the 220SMA, the FCC had to step in and specifically place 150 KHz of the 222-225 MHz band off limits to anything permenent. (Such as repeaters and so on). They specifially mentioned the 220SMA as being "unable to perform their duties responsibly" in their comments.

When the bottom of the 220 band went away, the repeater owners stacked the meeting and gave themselves 2.990 MHz of spectrum for repeaters and left the bottom 10 KHz (or so) for the low signal operators.

Also, the general idea at the time with those that were fortunate enough to be in the upper range of the band told the other repeater ops that it was too bad the FCC grabbed the bottom portion, but "they" weren't going to move or otherwise making much effort to acommodate the "losers". I asked them what they would have done had the FCC taken 223-225 MHz instead.

Yup. You can guess the answer. Same answer I got when I proposed that in all fairness since 20% of the band went away, they should recoordinate the remaining portion on the lottery system.

Generally, the attitude of most hams is to ignore anything that doesn't concern them, and if it gets even remotely close, scream bloody murder.

Yeah, 220SMA is a role model alright. Of everything that can go wrong with a coordinating body. One that is operated via politics rather than technical merits.

I've had my differences with SCRRBA, but at least they do their job based on technical merits. Note with votes. Not with favors.

>requires that the house ground be connected to earth by the installation of
>at
>least one ground rod. Therefore, if earth ground is RF ground, the two are
>already bonded together for AC purposes.

You are exactly correct in theory. In practice though all conductors have an impedence made up of a resistive component and a reactive component. Therefor, what is at ground for AC may not be at ground for RF because as the frequency increases the reactive component also increases. In other words the wire connecting everything has an impedence thats much higher at RF frequencys than at 60 cycles.

>>It is, however, a bad idea in my opinion. Bonding them together potentially
>>makes your shack a conduit between the two in case of a failure in one system
>>or the other.
>In cases where an RF grond is required, there is no choice - the RF ground
>cannot be separated from the house ground unless all equipment in the shack
>uses 2-wire AC connections.

Not so. See above. Three wire AC is the only way to wire the shack safely. The shield of the coax cable normally connects to the case of most equipment. The case of most equipment is also connects to AC ground through the third wire. If an ohmeter was placed between the coax shield at the antenna and the AC ground point a very low resistance would likely be measured. But, an ohmeter doesn't measure reactance. If the reactance was measured, it would likely go up drastically above HF. An alternative path needs to be provided for RF because of this reactance. Remember, lightning is RF and the whole point of single point grounding is to keep lightning out of the shack. Any amount of wire in the path increases the impedence so the logical place for the common point is outside the shack before the transmission lines enter the building.

>In summary, all equipment should be securely bonded together and all line
>plugs should be the three-wire type, with each ground wire firmly attached >to
>the chassis of its respective component. The RF ground, if required, should
>be connected to the equipment at only one point, in the manner previously
>described in this newsgroup by Gary Coffman.

Again, I agree in theory but not in practice. If coax is used for transmission line and the shield connects to the chassis, the logical place for that single common point is outside the building/shack. It doesn't make sense to me to

potentially have lightning come into the shack to go back out, hopefully. Also, what constitutes a good RF ground in one area may not constitute a good RF ground in another because of soil conditions.

I think were making a simple subject complicated ;-)

Hi Ron. In Canada, use your US call sign followed by portable VE_, with the _ representing the province you are operating in. Each province has its own number. Ontario is VE3. British Columbia is VE9. If you give me the specific province, I'll give you the appropriate VE_. In Manitoba, where I live, you would be YOURCALL portable VE4. 73/ Terry VE4UC

Hi. While travelling this summer in our beautiful briefly-thawed nation, assuming that you are a U.S. resident, have a U.S. callsign, and do not have a Canadian callsign, use your regular callsign, appended with /VE#. For example, AA0PQ (who also happens to have a VE call, so this is a purely fictitious example), while wheeling down the thrilling Trans-Canada highway through scenic Saskatchewan, could call himself "AA0PQ mobile VE5". Do not forget to append the VE call area. And the rules specify /VE# to be at the end of your call, not at the beginning, as in some other countries.

Do not expect any difficulty whatsoever from Canada Customs about your radio gear when entering Canada.

Enjoy. And check out the fabulous 145.35 MHz channel while in Winnipeg.

It is silly to believe that cw is anything close to obsolete. Of all the
modes of amateur radio (am,fm,ssb,cw,baudot,amtor,pactor,sstv,fstv, etc)
no one can argue that cw QSOs are the second most frequently used, probably
second only to fm and that is only because of the huge number of repeaters
avalailable. I would bet a survey of many other countries in the world would
show cw #1 in many places, probably in Russia.

#2 out of at least 10 modes certainly doesn't sound obsolete to me.

Also, no one can argue the fact that a cw is the most efficient
use of bandwidth for a QSO.

Unfortunately it requires study and practice and is therefor more unappealing
to the newcomers of the hobby. Big commercial interests and ham
dealers want to get rid of code requirement because more people will
get into the hobby and buy their stuff.

Oh come now! Why would Farmer Murphy be inhabiting Toys `R' Us?
He retired years ago from his prune farm, moved to SoCal, and
started some 440 MHz repeater coordinating body - I think it's
called SCUBA. Also, his call is K6FJC FM, SSB, and CW.

5113. This Week in Amateur Radio #116 (for air through 6/23/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-17 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <JW8f+2X.sanderman@delphi.com>
Source record: 244365

Here is a summary of news items covered on edition #116 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 23-Jun:

1. New Hampshire Hams Get New Antenna Zoning Protection Law
2. "Amateur Radio Awareness Week" Declared in Connecticut
3. FCC Establishes "Home Page" on World Wide Web
4. New Great Lakes Division Vice Director Appointed by ARRL
5. League Comments on FCC's Class B Device Deregulation Plan
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. "EZSATS" with Dave Mullenix, N9LTD
8. Japan Announces Plans for New "Fuji" Class OSCAR, '96 Launch
9. "The RAIN Dial-up" from Chicago
10. Weekly Propagation Forecast with George Bowen, N2LQS
11. "Amateur Radio Newsline" - Edition #931 from Los Angeles
12. Upcoming Special Event Stations
13. Ontario Club Offers Canadian National Amateur Youth Award

Funding for the program's transmission and production expenses was provided by a grant from the Blue Ridge Video and Digital Society of Roanoke, Virginia, where "This Week in Amateur Radio" is heard on the WB4QOJ repeater on 145.21 MHz, serving amateurs in Virginia, Kentucky, West Virginia, and North Carolina. Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community.

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM

or SANDERMAN@DELPHI.COM.

>page booklet for converting American spellings (used in the book) to
>English.

The answer is that both spellings are acceptable usage. The standard
reference for the English language is the Oxford unabridged dictionary,
and it lists both spellings as acceptable alternatives.

>This is a thread I would personaly not normally coninue in this group, but
>being dislexic (or thick middle class child) I have often found myself in the
>sites of many spelling zettots; and find them a bit of a raw nerve. I just
>don't think correct spelling is worth getting an obsession about. Particually
>on usenet with two radically differant forms of english flying about.

The mild variations between American English and Standard English aren't
radical. Correct grammar and spelling have little to do with which
variant is chosen, and everything to do with spellings, word choices,
and grammar that are incorrect in either variant. For example, "zettots"
is not a word in either American English or Standard English. It is
simply a wrong spelling, as is "Particually" when "Particularly" is meant.
Incorrect word choice, as in "sites" when the word "sights" is meant
is also wrong, and a potential source of error when conveying information.

Why should any of this matter? It matters for several reasons. In
amateur radio, our service is a communications service. The idea
is to convey information from one person to another without error.
We wouldn't accept the use of dit-dah as the Morse "spelling" of
the letter B, neither should we accept "zettots" as the spelling
of the word "zealots". Poor use of language is a symptom of
intellectual laziness. If you can't be bothered to communicate
your ideas clearly, lucidly, and correctly, why should we expect
the content of your ideas to be any more carefully, lucidly, or
correctly constructed?

If I find a computer program with many syntax errors, I'm rightly
going to suspect that the program logic may be similarly flawed.
When I read a posting or article that contains many blatant spelling
and grammatical errors, I'm going to have suspicions about the

validity of its content, especially if the author has English as
his native language. Now everyone has certain little idiosyncrasies
of spelling and punctuation. I continually battle with when to put
an apostrophe between "it" and "s". And typos are a common occurrence.
Those things can be overlooked in casual communications. But when
transference of the content of a communication is severely hampered
by poor spelling and grammar, that's a tragedy for both the sender
and the recipient. If you write that 2+2=5, I'm not going to assume
that "5" is merely a misspelling of "4". Rather, I'm going to conclude
your idea is wrong.

If you cultivate a precision of thought, precision of language usage
will follow naturally. If you are a sloppy thinker, your use of language
is apt to be sloppy as well. In a written forum such as this, the only
way we have to judge your reliability and competence is in how you express
yourself.

>I think were making a simple subject complicated ;-)

The subject *is* subtle. I take exception to portions of what you
both have written. An installation should have only one common point,
for both AC and RF. Jack has misunderstood if he thinks I've advocated
a single point *only* for RF grounding. That's an invitation to disaster,
as you note. However, a single common point does not necessarily mean
a single connection point to *Earth*. We really should adopt the British
practice of keeping the ideas of Earth and ground separate things.

That reminds me of a story. I once had a British instructor at a
manufacturer's school. He was explaining the workings of the circuitry
of a new piece of equipment. As he went through the schematic, he
would somewhat haphazardly say "Earth this", "ground that" as he
got his Britishisms and Americanisms mixed. Somewhat in fun I asked
him what was the difference between Earth and ground. He replied,
"Around this ****ing place, about 5 volts!"

Well, that's where the idea of a single point common comes in. It
effectively short circuits that 5 volts for us. As you note,
reactances can be a problem, and as Jack noted, Earth is a resistive
Mother. Wiring practices have to take those things into account.
Each installation is to an extent unique. We can't just blindly
apply simple rules to our grounding systems. We must carefully
analyze all the paths at DC, AC, and RF to make sure we supply
a common reference ground to all aspects of the system, and to
insure that if we need Earth connections, they be effective for
the purposes for which they were made.

A star topology almost always serves us best in achieving those goals. Any connection to Earth or equipment that doesn't enter and leave via that star point should be scrutinized very carefully. It will likely be the source of a ground loop or other problem. The exact location of the star point isn't usually extremely critical, but it's usually best to place it at the entrance to the shack because that minimizes the inductance between the various connections to station equipment we are trying to protect. This point forms our ground window.

If we have multiple connections to Earth, as we usually do, then those connections should all be commoned in a star. That point I call our Earth terminal. If that point isn't also our ground window, a heavy low inductance conductor should be used to join the two points. Earth is *not* our reference ground. Because it is highly resistive, Earth makes a lousy ground. Earth is just somewhere we'd like to direct lightning currents to go, and rarely, somewhere we'd like RF mirror currents to go. Just as multiple elements can make our antennas more effective, multiple connections to Earth can make our Earth terminal more effective. The more connections we have, just as with paralleled resistors, the lower the resulting resistance of the Earth termination will be. Lots of "ground" rods, well spaced and all tied together in star, is a good plan for lightning, electrical safety, and RF.

Alas, that's too true. Creeping featuritis infects more than the
HT market. Conceptually, a repeater is very simple. It's just a
range extender for the users' radios. It's sole purpose is to make
the channel pair more useful to the amateur community. Anything
else is just channel clutter.

5118. ### Would like info on ATV (fast/slowscan)

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-17 00:00:00 UTC
From: s2202629@titan.np.ac.sg
Message-ID: <3ruah3$lfm@titan.np.ac.sg>

Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Say, does anyone here work ATV (both fast & slowscan), I'm basically interested in getting started, and would like to ask a couple of (really beginner) questions.

Would appericiate directions to an FAQ which covers this too. Thanks

Please email - my newsfeed is awfully cranky.

5119. Re: Shuddering thoughts

In article <3ra9oh$2g5@jupiter.NordWest.POP.DE> Peter Lemken <plemken@mail.hb.provi.de> writes:
>I think the entire discussion pro and contra CW misses one important point:
>If we consider CW as not essential for the access to shortwave bands, why
>don't we dispose of other parts of the exam, too? For instance: Why should
>I know anything about satellite operation? I never intend to use a
>satellite. Or: Why not discard all sections related to vertical antennas? I
>never intend to use a vertical, because a) I believe in yagis only, or b) I
>will get my next vertical from my local dealer anyway.

The exam requires you to know something about satellite operations
and antennas because you are permitted to operate through satellites
or via antennas, but the exam does not require a *demonstration*
of working through a satellite or of erecting an antenna. The assumption
is that if you actually want to do those things you'll gather the
necessary skills, which you demonstrated you were aware were required on
the exam, as you need them. Only the Morse exam requires a demonstration
of use of an operating mode, and only Morse is a stand alone pass/fail
element. You can miss every question on satellite operations and still
pass the exam. You can't do that with Morse. If the Morse portion
of the exam were like the satellite questions, IE showed you were aware
of the principles behind Morse mode operations, then no one would be
complaining. But that's not the case. Instead we have a series of
pass/fail speed runs that signify little or nothing but rote wetware
conditioning. You could still be so ignorant of the basic encoding
principles that you might even confuse Morse encoding of alphabet
with language, or think that Morse encodings of OOK signals "get
through when nothing else will", which are both false, but you'd
have your license, ignorance intact, because of a demonstration of
rote mechanization of a modem in wetware. The current exam structure
equates modem mechanization to the entire combined total of every
other facet of amateur radio. That is so out of balance, and so
patently absurd, that it should be obvious to anyone that something
needs to be done about it.

Greetings all,
Well AOL has hit again. For some reason they dropped our screen name evegraph@aol.com and all of our mail. They can not reactivate that name for 12 months! So, we were forced to change names.
For anyone who has tried to contact us the new screen name is AmateurRad@aol.com.

The next issue of the ARO is up on the WEB. For the many thousands of you who responded to the trial subscription we have decided to provide this type of information free of charge to you.
The address is http://www.amateurradio.com
While up there checkout the International Internet Hamfest.

>Bob

When you say "shortwave", do you mean at the lower, long-distance
(worldwide) frequencies, or the higher, local frequencies?

Either way, it could be possible, though it all comes down to what the
station you connect to has to offer. You could, of course, try and
connect to multiple stations if the first doesn't offer what you want,
though the whole link will take a while and be very slow.

At the "shortwave" frequencies (10 Mhz and below), packet radio is
limited to 300 baud, which is VERY slow).

Above that, you can start to play with anything from 1200 baud up to
57600 and above bps, depending on what frequency you are playing with.

But, as I caution others on, if you are trying to access an Internet
account via the radio, EVERYTHING can be monitored, including passwords.
Once someone has gained a password, they can wreak havoc on your account,
possibly the system it is connected to, and generally give you a very big
problem and headache.

I hope this helps to somewhat answer your question.

Please feel free to e-mail me direct with any further questions about this.

>point back to the star at the house. A star of stars is an acceptable
>topology.

The guys are steel and not insulated from the tower. In addition,
the tower base is also grounded. I can connect all those grounds as a
star which then connects to the star at the house, but doesn't the
tower + grounds constitute 3 loops in the tower star?

IE, if the tower is grounded, a guy wire is grounded, and connecting
each of those to another, common, star create a loop?

Thanks, Gary,

Larry

more
>than that now.

Maybe so, Jim, but I too have heard very disparaging comments made against SCRBBA by at least one ARRL official. The fact is, it doesn't hold open meetings, it doesn't behave democratically, and it doesn't answer its mail.

Why you have continued to defend them is beyond my understanding...

You keep telling us about Texas. You never seem to grasp that the situation out here is different.

5130. This Week in Amateur Radio #116 (for air through 6/23/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-17 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <Z46euQU.sanderman@delphi.com>
Source record: 244382

Here is a summary of news items covered on edition #116 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 23-Jun:

1. New Hampshire Hams Get New Antenna Zoning Protection Law
2. "Amateur Radio Awareness Week" Declared in Connecticut
3. FCC Establishes "Home Page" on World Wide Web
4. New Great Lakes Division Vice Director Appointed by ARRL
5. League Comments on FCC's Class B Device Deregulation Plan
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. "EZSATS" with Dave Mullenix, N9LTD
8. Japan Announces Plans for New "Fuji" Class OSCAR, '96 Launch
9. "The RAIN Dial-up" from Chicago
10. Weekly Propagation Forecast with George Bowen, N2LQS
11. "Amateur Radio Newsline" - Edition #931 from Los Angeles
12. Upcoming Special Event Stations
13. Ontario Club Offers Canadian National Amateur Youth Award

Funding for the program's transmission and production expenses was provided by a grant from the Blue Ridge Video and Digital Society of Roanoke, Virginia, where "This Week in Amateur Radio" is heard on the WB4QOJ repeater on 145.21 MHz, serving amateurs in Virginia, Kentucky, West Virginia, and North Carolina. Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community.

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM

or SANDERMAN@DELPHI.COM.

The following is a QST

Apple Computer proposes a new data radio service for everyone.
Find out more about the N 2 proposal on Newsline report number 931
coming your way right now:

(*****
APPLE PETITIONS TO CREATE WIRELESS 'N2 BAND'

Apple Computer has filed a Petition for Rulemaking with the
Federal Communications Commission, asking for a spectrum to permit
high speed data communications for schools, libraries, community
groups, individuals, businesses and institutions. The proposed
radio service is called N 2 and would be available to anyone
without licensing or air time charges. Kind of like amateur
packet radio but without the need to be a ham.
In addition to permitting faster data rates, the N 2 Band
would allow users, for the first time, to set up their own
wideband wireless data links spanning five miles or more.
Rural and other dispersed communities and suburban interest
groups would be able to use the N 2 Band to develop local
networks as well as for N 2 participation. Apple says that
its N 2 proposal would complement, not replace, other licensed
and unlicensed network technologies.
One part of the N 2 Band comprises radio frequencies from
5150 to 5300 MHz. These are already earmarked in Europe for
local area wireless networks. The second portion, from 5725 to
5875 MHz is already available for low power, unlicensed spread
spectrum devices under Part 15 of the FCC's rules. Adding N 2
says Apple would allow fuller use of the spectrum while
permitting smooth transition to the benefits and technologies
of the N 2 system.
Apple's N 2 proposal follows on the heels of its successful
five year effort to obtain a frequency allocation for unlicensed
data personal communications services. Data PCS allows computing
devices to communicate wirelessly at relatively high data rates
within a local area, such as throughout a school. Because the
Data PCS band is unlicensed, a user may establish and operate a
wireless data communications network without paying a service

provider for installation and air time.

(*****
HACKERS HIRED TO HACK

And while on the topic of computer companies, word that Sun Microsystems Inc. is challenging three renowned computer experts to tackle what the company says is its uncrackable new Internet security program. Cryptographer Whitfield Diffie, consultant Tsutomu Shimomura and programmer Dan Farmer have been hired to do everything they can to break into Sun's new Java and SunScreen technology.
Diffie is renowned for writing and breaking codes. Shimomura is the San Diego security expert who led FBI agents to alleged superhacker Kevin Mitnick, N6NHG earlier this year. Farmer helped write and distribute SATAN, a program that allows people to probe networks for security flaws.
SunScreen is a piece of computer hardware that plugs into a computer and sends messages onto the Internet. It scrambles the outgoing traffic into what Sun says is an uncrackable code as long as the message is received by another SunScreen at the other end. If it works as promised, SunScreen would allow sensitive data such as credit card numbers to be shipped over the Internet without fear.

(*****
TWO VEC's DOWN

Gordon Girton, W6NLG of the Sunnyvale V.E.C. says that it is beginning to look as if the nation will be down to 16 V.E.C.s as of July 1st. Gordon notes that Great Lakes V.E.C. has not proctored a test session in the past six months. Also says Girton, the Charlottee V.E.C. has notified the FCC that it will stop testing on July 1. This, due to health problems with on of the groups senior administrators.
W6NLG adds that the new and badly needed 610 V and 1070 V forms appear to still on hold but he hopes to know more as a result of the V.E.C. Conference in Gettysburg on June 23rd.

(*****
NEW ADVANCED QUESTIONS

Also on the examination front, effective July 1, 1995, a new Advanced class question pool takes effect. V.E. exams beginning on that date will use questions from the new pool. The new, 4th Edition of The ARRL Advanced Class License Manual is now available and covers these new questions.

(*****
OLYMPICS HELP

If you are planning to be in Connecticut this from July 1st to the 9th, and if you have some time to donate to providing

communications to a worthy cause, then the Summer Special Olympic Games needs you. This is because the World Summer Games Organizing Committee has spent millions of dollars to design and construct a complete communication system for the event and now, at the last minute feel that hams would be the best possible communications personnel to man the system.

Brian Battles, WS1O of the American Radio Relay League is the Amateur Radio Liaison to the 1995 Special Olympics World Summer Games. Battles says that he has a lot of open slots to fill and very little time to fill them. He says that they MUST HAVE enough ham radio operators to man the Command Center around the clock throughout the entire 10 days of the Games. As such he needs commitments right now from enough amateurs to run the Command Center in three 8 hour shifts per day from July 1st to the 9th. Battles says that you don't have to know anything about the particular equipment or procedures to be used. Just pre-register with him and then be able to get to the venue of the games in Connecticut on your own and be ready to do the best job that you can.

If you want to help with this worthy event but haven't already registered as a volunteer get in touch with me Brian as fast as possible to let him know if and when you can be there.

You can call Brian Battles, WS1O, daytime at ARRL Headquarters at (203) 594-0222 or (203) 594-0200 or nightside at his home at (203) 827-9956. The fax number is (203) 594-0259 and his E-mail address via the internet is bbattles@arrl.org.

Again, the Special Olympics Summer games start in less than two weeks. There are a lot of open communications slots to fill quickly. Please call or fax Brian if you can get to Connecticut with some time to help.

THERNES APPOINTED NEW GREAT LAKES VICE DIRECTOR

John Thernes, WM4T, of Covington, Kentucky, has been appointed vice director of the Great Lakes Division for the unexpired remainder of the term of that office. A former Section Manager, John will serve until January 1, 1996.

The vacancy in the office of vice director occurred when former Vice Director George Race, WB8BGY, become the new division director following the resignation of Al Severson, AB8P.

(*****
SSTV at W1AW

A complete, modern slow scan television system has been donated to W1AW. The system, designed by John Langner, WB2OSZ, includes his PASOKON TV software, a "frame grabber", a 486 color computer, and a charge coupled device (CCD) camera.
The system, valued at some $2,000, was donated by Norm Creller, W8MPM. Creller is a manager at Chrysler Motors in Toledo, Ohio.
The new SSTV equipment is set up for use by visitors to W1AW. They will be able to observe SSTV on the HF bands as well as to send pictures.

(*****
DIGITAL SPLIT

There has been what all are terming as an amicable parting of the ways between two halves of the American Digital Radio Society board of directors. According to a press release from ADRS the result is two organizations growing from the one.
The original ADRS has changed its name to the International Digital Radio Association. It has a six member board consisting of W4ZB, W2TKU, TY1PS, KI4T, VE3CDX, and W2JGR. This group will focus on the Digital Journal and related activities. N2HOS will be the Journal's editor in chief.
A new organization will take over the name of the American Digital Radio Society. Its core members so far are W2NRE, KE5HE, WA1URA, K4CJX, W4NPX, and N4SS.

(*****
MANUFACTURER UPSET WITH QST STORY

Telex Corporations Steve Morris K7LXC is angry with the American Radio Relay League over an article in the April issue of QST Magazine and he has made his frustration known to other members of the ham radio business community.
According to the May 15th W5YI Report ham radio newsletter, Morris vented his anger with the QST article at the Amateur Radio Industry Group meeting held in conjunction with the recent Dayton Hamvention. There says W5YI, the Telex representative gave a presentation that was extremely critical of an article that he says urges new hams to shop for equipment using 800 telephone numbers rather than patronizing local dealers.
Morris said that he strongly objected to the League publishing an equipment purchasing system that he considers as being detrimental to the amateur radio equipment supply industry. This, because it plays one mail order firm against another.
The ARRL has not commented officially or publicly on Morris comments and it is very unlikely that they will. This, based is the long standing albeit unofficial policy of never to commenting on matters of internal policy.
Also, there is another question to be answered. That being if W5YI did the proper thing in publishing the story in the first place.
Since its inception, the industry association has had a rule

that says matters discussed at these meetings are considered as being top secret confidential. Like a closed board of directors meeting of a private corporation.
As such, the ham radio press is there only as an unofficial guest. Those press people who attend have long known that they are supposed to leave their reporters note pads at the door or not bother to walk in.

(*****
RATS ON WWW

Andy Funk, KB7UV reports that the Radio Amateur Telecommunications Society is now reachable on the Internet's World Wide Web. The RATS Home Page provides links to projects including the ROSE X.25 Packet Switch, ROSE Packet Radio Mailbox System and much more. The software for each project can be downloaded directly from links on the Web pages. Additional RATS projects will be added shortly. The RATS Home Page also includes a link to the Packet Radio Home Page maintained by Howie Goldstein, N2WX.

(*****
NEW OSCAR NET

Project OSCAR is now running a VHF net in the San Francisco Bay area on the WA6PWW repeater. The net has been on for the last 3 months on Wednesday nights at 7:30 local Pacific time. Participants and try to answer questions about the birds and ground station operation and gear for those checked in.

(*****
S.P.A.R.C.

The Suffolk Police Amateur Radio Club, of Long Island, New York has a new High Frequency net meeting every Monday, at 1630 EST on 3.910 Mhz.
The purpose of the net will be two fold. First is to interact with other community members of Law Enforcement. The second is to connect with other members of SPARC located in the other areas of the country who are not able to contact SPARC on the club's VHF net.
The net is open to any licensed amateur with interest in the net. Coordinator will be Russ Famulare, N2TZM, located in Dix Hills who is a retired New York State Court Clerk.

(*****
SENIOR OLYMPICS

Ham radio operators from the Alamo Area Radio Organization and the San Antonio Radio club in Texas recently united to serve as volunteers for the U.S. National Senior Sports Classic of The Senior Olympics. Hams served as "net control operators" at the event headquarters. Operation was on an 800 MHZ. trunking system

and also on 2 meters. 150 hand helds were used in the event. All 50 states and Canada were represented by over 8,500 athletes, ages 55 to 102.

(*****
XE CONVENTION

A bit further south, The Association of Radio Amateurs of the Republic of Mexico says that it invites hams worldwide to attend its 35th annual convention to be held this year in Guadalajara, Mexico, the 27 to 30th of July.
The convention is the Hotel Malibu, one of Guadalajara's luxury resort convention centers and will offer forums on DXing, packet radio, repeaters, satellite and emergency communications.
Families are welcome to attend, and there will be a cultural program for interested spouses.
For Additional information contact Sergio Valdes Sada, XE2RJ at his callbook address.

(*****
DX SEBORGIA

Seborga is now T8A to T8Z. DL8AAM reports that The ITU has issued T8A-T8Z to this small country while invalidating all 1P prefix calls.
Also, the Radio Society of Great Britain reports that UA9OBA and RW3GW will be part of an Antarctic scientific expedition lasting several months. If possible, the two hams hope to activate Bouvet Island in early November if the can get the necessary permission from Norweigan telecommunications officials. The probable call sign will be 3Y/R0FL.

(*****
DX PHONY QSL LISTS

Also, DU7CC advises via packet radio for hams to be aware of phony QSL operations. Tom says that some people are allegedly are selling long outdated QSL Manager Lists and asking dollars or IRCs. Tom says he has found his name listed on a number of these sheets for operations dating back well over two decades ago.

(*****
YOUNG HAM OF THE YEAR

Yet another reminder that the nominating period for the 1995 Young Ham of the Year award closes on June 30. If you are one of those who requested a nominating form but have not returned it along with the necessary information on your nominee, please consider doing just that right now. This is because the judging committee will be scattered across the U.S.A. and each nominating package must be duplicated so that each person judging has the same information.
The Young Ham of the Year award is open to United States

licensed amateur radio operators age 18 or younger who have made significant contributions to the nation, their community or the state of the art in Amateur Radio. Nominating forms are available by sending a self addressed stamped envelope to the Young Ham of the Year Award, in care of Newsline at 28197 Robin Avenue, in Saugus California 91350. Or you can download the form from the ham radio files area on GEnie or America Online.

(*****
MARY WINS AGAIN

And speaking about the Young Ham of the Year Award, we are very proud to announce that the 1990 winner Mary Alestra, KB2IGG, Staten Island, New York is a winner once again. Newsline has learned that Mary, who is now seventeen, has been selected by the Foundation for Amateur Radio to receive the 1995 Martin J. Green Sr., K2ETO Memorial Scholarship. This gives Mary $1000 toward tuition at an institute of higher learning of her choice. Mary is one of almost three dozen winners of scholarships administered by the Foundation for Amateur Radio this year.

>is there should be only two classes of license, entry and general;
>any further recognition of advancement should be done by non-governmental
>organizations. One of the reasons I think the CW-for-HF requirement
>is bad is that it stands in the way of such a simplification.

My idea would be to abolish the present Advanced and Extra writtens and create a series of 25-question modules with Extra-level questions -- one on space operations, one on HF propagation and operating practices, one on VHF/UHF/SHF propagation and operating practices, one on digital communications, etc. For a General ticket you'd have to pass the present Novice and General written elements, and *either* 13 wpm code or one of the new modules. To go Advanced (assuming we didn't drop Advanced and Extra as you propose) you'd have to pass *both* 13 wpm and one of the new modules; for an Extra ticket you'd have to pass 20 wpm code and *two* of the new written elements.

5133. NEEDED: QSL Info for Yankee AF KG8CL S/E Station

Not only a good idea for safety, but also for noise and RFI problems as well.

However, it isn't always easy to maintain that ideal. Someone already mentioned the problem of a rig with a 3-prong AC plug connected to a grounded coax. There's a loop if I ever saw one. How in the heck does one get around _that_?

When it gets beyond the simple tenets like starring the system, grounding and shielding become black magic arts. *sigh*

After wasting my time and gas to go to St. Paul today, I'm ready for Grayslake
also- unfortunately we both must wait for a few months :-(

I don't have anything official in front of me (like a flyer) but it has
traditionally been the last or next to last weekend in September on both
Saturday and Sunday. As you know: Grayslake, IL, crossing of Rt 24 &120 at the
Lake County Fairgrounds.

I have the Chicago FM Club's address (the host) as POB 1532 in Evanston, IL
60204- so you might drop them a line, or check the ARRL calendar either in QST
(August issue?) or online (oak.oakland.edu).

CU there, but don't steal my bargains!

5140. ARRL NOT FOR PROFIT ???

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-17 00:00:00 UTC
From: mike.reynolds@michaelr.com
Message-ID: <9506180550093577@michaelr.com>
Source record: 244392

QST, May 1995, reports on page 43, that ARRL has nearly 3 MILLION dollars in "Unrestricted Undesignated Fund balances" at the end of 1994.

QST, page 44 income statement shows that ARRL collected in 1994 FAR more revenue from publications sales and advertising than they did from membership dues.

I'm surprised that KPMG Peat Marwick LLP doesn't challenge the ARRL's "not for profit" status in their "Independent Auditors' Report". The ARRL claims that the large amounts of publishing and advertising activity is "necessary or incidental to its purpose".

Many of us believe that many hams send "dues" into the ARRL solely to get the QST magazine. I suggest that the ARRL ought to pay their fair share of income tax just like all the other large U.S. publishing and advertising companies.

Mike Reynolds, MBA, CPA, W0KIE

Several years ago I found some cable similar to what you want at
Anixter Wire and Cable Corp who have multiple offices throughout the US.
Their local office phone here in Tulsa is (918) 664-5558.

What I wanted was multiple twisted pairs, each pair shielded, and 24
plus conductors inside a shielded non contaminating (meaning it could be
buried) jacket. I planned to run (and did) 1300 feet of the stuff from
our office to our mainframe located across a Federal interstate
expressway from us (no, I didn't ask for permission). This was in the
days when you could *rent* a phone line and a *zippy* 300 baud modem
from the phone company for *only* $50 per month. There just *happened*
to be a large drain tunnel under the expressway between the two offices.
Line drivers on each end allowed us to connect several workstations to
the mainframe and speed things up mightily! ;).

This particular cable was made for connecting phone systems underground
(hence the shielded twisted pairs). But they stock a *wide* variety of
specialty cables for many purposes. Let me know what luck you have.

I can't take it anymore, I have to stop the occasional lurk and jump in here. I have noticed that some of the repliers are guys I've talked to on Fidonet and Genie before. If you guys remember, I made mention a year or two ago of someone on a BBS network who would pull all sorts of baiting and do general insulting. Well folks, that guy is Burt Fisher and he's now unleased himself on the Usenet.

> To Mr. Fisher: I hereby demand that you explain yourself. And don't
> fall back on your previous advice to "see the movie." You explain
> yourself clearly and to the point...or admit that you gratuitously
> insulted every ham who saw this message, and offer a public apology.

Larry, you are not going to get an apology. The BURD, as he has called himself has been pulling these confrontation antics on the Relaynet BBS network, (RIME for short), for years. He has even been suspended, (Insulated is the word they use as it is the name of the function of the mail transfer program), at least twice.

As soon as he figures out what MIME is he'll upload replies in high ANSI, we can expect full screens of "HAMS ARE BORING" and "QSL, THE BURD" as well.

Heaven help us all.

5144. Daiwa rotator

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-17 00:00:00 UTC
From: dvitale2@aol.com
Message-ID: <3s07pu$g1q@newsbf02.news.aol.com>
Source record: 244396

I have a Daiwa MR-750PE multi torque rotator. I need another
motor for it. Daiwa evidently does not make it anymore and I
can't find anyone in the U.S. that sells parts or supports that
rotator. I have called many ham equipment distributors, like
A.E.S and H.R.O. ect....
If anyone knows where I can find a distributor in the states or
perhaps if anyone has a whole rotator system that they are not
using, I may be interested it purchasing it from you.
It's a super rotator. I don't know why Daiwa stopped
manufacturing it. With all four motors mounted on the housing it
will support up to 36 sq. ft of antenna. I just have one motor
mounted on the unit and in strong wind storms it will slip.
If anyone has info, either post on net or e-mail me.

Thanks, Dan Vitale KD6P......73.

>
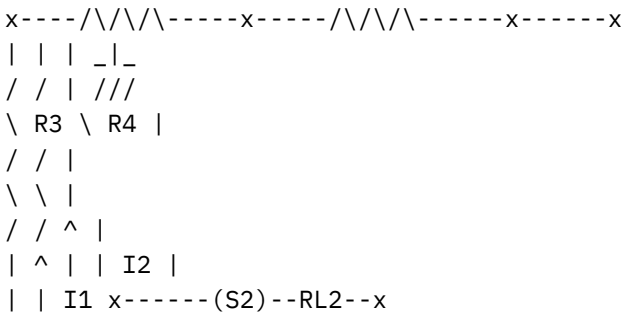
>IE, if the tower is grounded, a guy wire is grounded, and connecting
>each of those to another, common, star create a loop?

It's a circle, but it's not a ground loop. A bussbar represents a
ground loop, but it's not a circle. Confusing isn't it? The terminology
could stand improvement, as with the case of Earth and ground, they
aren't the same thing at all.

A ground loop occurs when two current meshes share a common
element. The current of one mesh modulates the potential
seen as "ground" by the other mesh, and hence indirectly
the current flowing in the second mesh. So the "loops" being
spoken of are current loops, not physical loops. And it
takes at least two current loops interacting in a certain
way across a shared impedance to create a ground loop. A
bussbar "ground" is a classic example of a ground loop.



```
| |
x-----(S1)----------RL1-----------x
```

Ok, R1 and R2 are the distributed impedance of the bussbar. R3 and S1 represent one piece of equipment, and R4 and S2 represent another piece of equipment. RL1 and RL2 are the working loads for S1 and S2 respectively. There are two current meshes. Current I2 flows through S2, R4, R2, and RL2. Current I1 flows through S1, R3, R1, R2 and RL1. R2 is the common impedance. Any change in I2 will be reflected as a different potential at the R1 side of R2, and will be seen as an elevation of "ground" potential by S1 which will alter the value of I1 flowing in that mesh. Any change in I1 will similarly show an elevated "ground" potential at S2. This is a ground loop. The potential of ground is seen as different values depending on the current flow in the *other* mesh. If lightning were to strike RL2, the value seen as ground at S1 would change dramatically, and likely cause damaging currents to flow through S1 and RL1, or between S1 and S2 if they share any interconnecting cabling.

If we eliminate the shared impedance by collapsing the buss to a star, the ground loop goes away.

The guy wires don't represent a ground loop because there aren't two current meshes.

```
x-------------(SL1)
/ | \ |
/ | \ |
/ | \ |
/ | \ |
/ | \ |
x-/\/-x-/\/--x--------x
|Rg1 | Rg2 |
|_____*______|
star
```

Where Rg1 and Rg2 are the impedances of the individual strips of Earth connecting the guy anchors with the tower base. These are shorted by the star connection and can be ignored. The current source is SL1 which represents a lightning bolt flowing current to Earth. The current will divide at the tower top, with some flowing down the tower, some flowing down one guy, and some flowing down another. The guys are in *parallel* with the tower between Earth and sky. There's only one current mesh, and no ground loop. The tower looks like the common element of our ground loop example above, but it isn't because all the currents are flowing in one mesh.

Now if the star were missing, and some piece of equipment's current mesh bridged a guy anchor and the tower base across Rg1 or Rg2, *then* you'd have a ground loop. Currents flowing

across Rg1 would induce a potential that would be seen in
the equipment current mesh, and alter the current flowing
through that mesh. By starring the grounds, we short circuit
that possibility.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 JUNE AND FORECAST FOR 18 JUNE - 20 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 16 Jun
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Jun 19 Jun 20 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Jun: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 16 Jun
Learmonth 5 2222 1111
Fredericksburg NA NA
Planetary NA NA

Observed Kp for 16 Jun: 3313 2233
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
18 Jun 10 Quiet to unsettled
19 Jun 13 Unsettled
20 Jun 16 Unsettled to active
COMMENT: Active levels are expected on 20 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

17 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Jun normal normal fair
19 Jun normal normal fair
20 Jun normal fair fair-poor
COMMENT: Conditions at high latitudes are expected to become
degraded 20-21 June.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
17 Jun 20 near predicted monthly values

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
18 Jun 20 Near predicted monthly values
19 Jun 20 Near predicted monthly values
20 Jun 20 Near predicted monthly values
COMMENT: Degraded HF comms may have been experienced during local
night. MUFs at Townsville and Hobart were near predicted monthly
values. Degraded HF comms may be experienced for southern regional
Australia during interval 20-21 June.

The "Selective calling" signals you mention are intended to used when brief one way transmission are allowed - such as to establish two way communication with another station or telecommands. Are you planning on establishing two way communications between the pager (a receiver) and the base station (a transmitter)?

Whatever gave you that idea? Sure we can utilize paging on some
amateur bands. It's a point to point transmission, allowable under
auxillary operation rules. See 97.201(e). Amateurs are allowed to
make several different kinds of one way transmissions. Beacon operation
is one. Amateur bulletin transmission another. Telecommand a third.
Telemetry a fourth. Auxillary operations a fifth. Etc. Heck, calling
CQ is often a one way transmission something like paging. What we
can't do is engage in broadcasting to the general public. Amateur
paging falls under the auxillary rules in that it is a transmission
intended for one of a closed system of stations. See 97.3(a)(7).
There's no requirement that stations engaged in auxillary operation
perform two way transmissions. Both the pager and pagee have to
be amateurs, of course. Amateurs can't perform paging for the
general public.

>well on their way, and decided to replace *all* connections with wire nuts.

When using crimp ferrules, the wires are supposed to be twisted then
crimped. The crimp is only to assure the wires don't untwist. It's not
intended to be the only electrical connection. This is a secure wiring
method when done correctly. Normally, this method is only required on
safety ground wiring, but it is acceptable practice for other wiring if
extra insulation is applied.

Wire nuts often suffer from insecure connections too, and can be a real
hazard if not properly used. Electricians use wire nuts because they
are quick, not because they are good. Ferrule crimps are required on
safety grounds because they are good, even though they are a pain to
apply properly.

You suffered from an incompetent electrician, not from a faulty wiring
practice.

5154. Anybody know what a KR6 Coolidge Tube Is?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-17 00:00:00 UTC
From: geoffs@onr.com
Message-ID: <3rtpb8$1ab@Sierra.onr.com>
Source record: 244406

This isn't exactly a ham radio topic, but it's close enough for a try.

I've got a couple of General Electric Coolidge tubes, type K.R.6. They look like large, high-vacuum rectifiers. Coolidge tubes, however, are GE's trade name for X-ray tubes, I think. I'd say they were built in the late 1920's and are in working shape (vacuum's still intact and fialments are good).

These don't look like regular X-ray tubes. The ones I'm familiar with have tungsten or molybdenum anode blocks stuck in the large copper heat conductors at a 45 deg angle to the axis of the tube. The anode cups are huge on my tubes and they're cylindrical. I've seen flash x-ray tubes before but can't remember their internal geometry.

Anyone know what I've got? I'm not planning on building an X-ray machine and I doubt that these things are really collectible but I'd like to find out some history before I turn them into bookends.

>broadcast a few times over a local repeater in my area. I feel that it
>is absolutely wrong, but as a new ham in the area I don't want to
>alienate myself for being a "rules stickler".

You're correct. There are several violations involved in re-transmitting
the signals of a non-government commercial broadcast station. First,
that's a violation in itself, regardless of content, 97.113(e). Second
is the prohibition on music transmission, 97.113(d). Third is the
commercial content restriction, 97.113(a). And fourth, aside from the
Part 97 issues, you are infringing a number of copyrights, as is perhaps
the person originating the music on hold via reuse of a commercial
broadcaster if they aren't paying the ASCAP fee. (The FCC may be willing
to turn a blind eye, but ASCAP isn't. If they find out about it, ASCAP
lawyers are going to be on you like flies on sugar.)

When the FCC issued their "incidental" music opinion, they very carefully
drew it so that it applied to cases of music picked up unintentionally
by a microphone being used for normal amateur communications. The example
they gave was that of a parade where a band might accidently be audible
when a ham parade marshall transmits an otherwise legal transmission.
Music on hold is clearly an intentional act on the part of the third
party in the case of a patch, and thus in no way falls under the incidental
escape hatch. It is always the control operator's responsibility to make
sure any third party content is in accordance with the regulations.

The restriction against chips makes this a much harder task than it
has to be.

>To program the Tx & Rx units, each would need to have 2 logic inputs or
>outputs. I guess that for the Tx, out1 could switch the frequency (hi/f1,
>lo/f2) and out2 would switch Tx on/off (hi/on, lo/off). On the Rx side,
>in1 should indicate what frequency had been received (eg hi/f1, lo/f2) and
>in2 indicate whether an Rx had been received (eg hi/Rx on, lo/Rx off).
>
>Could anyone suggest a circuit that could do the trick ?

Sounds like all you're interested in is crude FSK. That's probably
the second worst digital modulation you could use, after only AFSK.
Ok, transmission is the easy part. All you need to do is add the
following circuit to your oscillator.

```
Oscillator frequency determining element
|
= shift capacitor
|
x---/\/\/\------------------------RS-232 from computer
| current limiting resistor
-
^ switching diode
_|_
/// circuit ground
```

For transmitter PTT, a simple FET switch in the power lead of the
oscillator will do.

Reception is another matter. After the RF part, which can be a simple
direct conversion receiver, you can use a tracking PLL and slicer, a
discriminator and slicer, or a pair of tight bandpass filters and a
slicer. All of these will be complex circuits unless you allow the use
of a chip. You could count zero crossings in software, but you'd still
need an opamp, or it's discrete equivalent, to give you an open loop

sample from the receiver.

I highly recomend that you relax your prohibition on using chips.
If you do, the complete transmitter can be a single MC2833, and
the complete receiver can be a MC13135. They are designed to allow
FSK transmission and reception up through 200 MHz with only the
addition of a few discrete components. Motorola has application
notes and evaluation kits available. These chips are cheap, intended
for mass market use in things like cordless phones.

If you really want to experiment with digital modulations, you won't
limit yourself to crude FSK. You'll need an oscillator, a 90 degree
RF phase shift network (simple), a pair of four quadrant multipliers,
either MC1496s or packaged diode rings like the SBL-1, a simple
summer, and a digital waveform source (parallel ports on the PC with
a simple R-2R ladder network and a bit of software will do, a Sound
Blaster card would be even easier), then you can generate any arbitrary
modulation you like, MSK, QAM, QPSK, AML, FSK, etc. The receiver can
consist of the MC13135 with perhaps a few added components for decoding
some of the modulations. Then you can really learn about the different
ways to send digital data efficiently.

>Can you grade the attached term paper?

It's at best a C paper. It shows lack of research, incorrect
information, a poor grasp of the subject, instances of poor
grammar and spelling, and only fair organization. It's not
a terrible effort for an elementary school student, but it's
far from outstanding. If the student is in a higher grade,
it deserves an even lower mark.

>Does my student sound like he was influenced by me?

Yes.

>engineers, physicists, radio technicians and computer experts, what will
>*we*, the bakers, plumbers and musicians do? Look for another hobby,
>because we are too stupid to build our own TNCs or program our computers?

If you are truly too stupid, then yes, you should leave the service.
If, however, you are merely ignorant and have the desire to rectify
that failing, then you are an ideal candidate for the amateur service
since its purpose is life-long self-paced learning. If you are not
learning new things every day, then you are dead in the head and might
as well go pick out your grave now and quit being a burden on the
rest of us.

Over-reliance on the formal education industry is one of the leading
failings of modern society. It has become certificate driven instead
of knowledge driven. All you really need to succeed in amateur radio,
or life, is a bit of rudimentary reading and math skill, and a burning
curiosity to learn and do new things. One of the things the formal
education industry does best is attempt to stamp out the latter in
its victims while turning them into docile easily herded fodder for
the governmental and industrial bureaucracies.

>one way or the other, but you might want to read up on this issue.

A good place to start is the Sci.med FAQ on EMF effects. It separates what is known from the hysteria of the mob. The gross effects of EMF exposure are well known, and there are standards suitable to protect workers and the public from those effects. There may, or may not, be other subtle effects, but if they do exist they are marginal players at best.

When you hear the media trumpet things like exposure to X doubles your risk of getting Y, you should ask just what is the absolute level of risk in the first place. If exposure doubles your risks from 1 in 100,000,000 to 2 in 100,000,000, is that *really* cause for concern when other risks you face daily run as high as 1 in 4? The American Physical Society just issued a position paper on low level EMF that says no. It's penny wise and pound foolish to worry about such trivial risks when efforts would be better concentrated on more pressing risks.

Besides, if you do the square law calculations, you can easily see that a powerline's EM fields will be weaker at your dwelling than the EM fields from your house wiring or home devices, regardless of the fact that the absolute field strengths at the sources differ by orders of magnitude. Yet people who routinely run electric razors over their faces are terrified by power lines 300 or more feet away, or by amateur or commercial radio broadcast towers. That's just mass media cultivated ignorance and kneejerk cowtowing to environmental special interest lawyers like Jeremy Rifkin, Ralph Nader, and their merry bands of neo-luddites who make their living feeding those fears.

>http://www.pff.org/telecom_revolution.html

Well after reading this report I was not convinced that it had the American
citizen in mind. Rather big business seemed to be the main theme with aution
this and aution that. The idea of making phone calls less expensive and
bringing new technologies into the field faster so profits could be made.

None of these are bad or evil, however, I was not sure how the personal radio
services (amateur, CB, etc.) would fair under this report. The report does
mention that the OC would be coordiating U.S. international commitments. It
might be that my concerns are answered by this function of the OC.

IMHO, I am not in favor of this. Streamlining the present FCC is a good idea,
but complete replacement is not (IMO) needed.

These are my thoughts and are subject to change without warning.

5162. Phyllistran Question

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-17 00:00:00 UTC
From: dearnshaw@worldbank.org
Message-ID: <3s4md1$fde@minerva.worldbank.org>
Source record: 244414

I am re-installing my tower after moving QTH. My original tower was supported by Phillistran, which had been in place for about eight years. I'm thinking of using the same lengths of Phillistran with the new tower. Physically, the Phillistran looks in good condition (no nicks in the jacket, etc). Does anyone know if there's a serviceable "lifetime" for this stuff - presumably it must weaken over time, but what is that time?

Thanks, Darrell (NR3Y)

There is now a WWW page for MetalMan, the sheet metal design
program for Microsoft Windows and Windows NT. Create metal
chassis for your electronic components easily. The URL is:

http://www.unm.edu/~baltz

MetalMan is a parametric design package for creating sheet metal
parts. Quick, simple mouse operations control virtual machine
tools. Perform operations graphically on simulated stock to build
3D solid models. Generate cost estimates, shop reports and DXF
output.

The ARRL does not generate a profit for its owners or its stockholders. For that reason, it is not for profit. I don't think being not for profit doesn't mean it can't be large or growing, it only means that it can't be generating a profit for someone.

Preach it brother! I had a demo for some scouts one afternoon
and scanned down to around 3870 or so. This "gentleman" was calling
CQ so I replied to him. He then changed from CQing and entered into
a cussing contest. He was a total idiot. 40 is almost as bad too.
I enjoy 160. It is truly the gentleman's band. 10 is good too until
the 80 crowd finds out it's open, then they park up there and whine
and moan. I used to wonder why in the world people would want to tap
CW instead of talking. After listening to 80 for about 15 minutes, I
knew why! Boy, do I know why. Also, you might wanna try 17 or 12,
they're a lot of good folks on there too. If you have enough wire,
call me sometime on 1.999; we have a good group there. By the way,
there's a nice group the hangs out on 1.992 in Washington, you might
want to try them as well.

My vote would be for the carribean!!! Try going down to St. Thomas.
Still got to have a passport, even though it is a U.S. possession,
or a birth certificate with appropriate seal, or believe if or not,
a voter registration certificate works! (I used this one to go to
American Samoa a few years ago...took me 15 minutes and $1.50!
Heck of alot cheaper than the passport.. and instant gratification too!)

Anyway...there is a hotel that was owned by a ham over on water Island..
there was only two there back in 1986 when I was there...so the
smaller of the two will be the one you are looking for ;-) And they
will probably let you install antennas...we installed A BUNCH of
antennas all over the place for the 1986 CQ CW test. (Took first
place inthe world multi-multi as I recall.. ;-) Anyway..alot of
fun, and you are instant DX, and it's immediately available
too you from East Coast!

Good luck...If you have questions...go ahead and ask..I've done this
4 times.

Ok, now I understand. It's the common point obtained by tying the bottom of the guys and tower together in a star which changes the configuration from a loop to a "mesh". In turn by tying the mesh into a the star at the house entrance panel eliminates the loop which might be formed between the two stars were they not connected.

Thanks for the help, Gary.

>a few friends together and erect a "repeater" for our exclusive use
>(and at our exclusive expense).
>

Have you lost all sense of reality? Exclusive is a very serious word when you start talking about who has the "right" to use the repeater and who has the "right" to use the frequency pair. I strongly suggest you think about this statement. If the repeater is for their "exclusive" use, doesn't that imply that the frequency is exclusive too? Since they would have "coordination (if that's what you want to call what SCRBBA does)) then where does that place the rest of the amateurs? Out in the cold. SCRBBA is a joke. Carl Pagel is also getting on my nerves. I have sent him 2 letters (over 2 months ago) and he's the secretary of SCRBBA? Well Mr. Secretary, why no answer??

>Now, the "repeater" may be intended for public use, but it may not. It
>is up to the owner / trustee, one who paid for and maintains the station,

>the other (maybe the same person) who is legally responsible for many
>aspects of its use.
>

Part 97.205 (e) basically states that a repeater owner may limit who uses the repeater BUT how do a "few buddies" who occasionally use their repeater to
make an autopatch or say HI (just in case they didnt talk on the phone that day) constitute any type of contribution to the amateur service? PR docket 85.22 is the key here. Everyone PLEASE get out your rulebooks and read this decision!! SCRBBA is in direct violation with part 97 rules, thus should have
no validity or credibility.

>My humble opinion. And, btw, I do not favor "private" systems myself,
>just find that they have a right (even if irritating to me personally)
>to do so.

You know Clark, every has an opinion, and something else too. <g>

Ron.C.Kirkpatrick@tek.com wrote:

Can anyone tell me how to ID while I'm in Canada?

Assuming you have a valid US ham call, you ID with your call, followed by the word "mobile" or "portable" (slash for CW), followed by the appropriate Canadian prefix for the province or territory you are operating from. [General Radio Regulations, Part II, Section 57(2); in Industry Canada's information circular RIC-25.]

For example, when I first moved to Ontario about 2-1/2 years ago, I used my US call and ID'ed as "WA6SGA mobile VE3".

The prefix varies from one province/territory to another. For Ron, who evidently lives in Oregon, the most relevant prefixes would presumably be VE7 (British Columbia) and VE6 (Alberta). If in doubt, of course, listen for the calls of other hams on the air.

The current Canadian regulations require ID'ing at the beginning and end of each QSO or test transmission, and at least every 30 minutes during the course of a QSO. The ID may legally be in either English or French.

Well, that's the problem isn't it? There isn't room for everyone right
now. I've seen that once before on 75 meters. That wasn't at the last
sunspot minimum, rather it was before that, when AM still ruled. The
band was saturated from end to end with contending hetrodynes. People
got rather snappish then too.

>I can see wanting to talk with your buddies on the same freq

>take a hike bonehead" etc. etc. etc.

Psychologists have conducted experiments with rats where they keep
increasing the number of rats in a fixed size cage. Eventually a
point is reached where the rats start to snarl and snap at each
other. We see the same thing among humans in crowded inner cities
like New York where extreme rudeness becomes the order of the day.
This is the territorial instinct at work, as the Californians say,
"Give me some space, man."

>There used to be intellegent people on ham radio. Now we got an entire
>spectrum loaded with havoc, self serving lonely people, self righteous
>abuse, and lack of patience and consideration. Is this what the internet
>will be like 40 years from now??

Perhaps. We see hints of it now with some territorial people snarling
and snapping when an "off topic" post appears in "their" newsgroup.

Unlike the radio spectrum, however, as long as there is disk space somewhere, another group can be spun off. We've seen that happen right here in the amateur newsgroups.

There is also another way, and that's the use of smarter readers so that we can pre-filter threads and individuals from our news stream. There are ways to do that on amateur radio too.

Back at the last congestive collapse of HF, during the AM era, the solution was to go to SSB. After a brief, but relatively violent, adjustment period, there was once again enough "space" to relieve the crowding, and the bands got back to a semblance of decorum. At the last sunspot minimum, crowding was returning to the lower HF range, but it was still tolerable. Today at this minimum, it has reached the point of the rats in the cage, and the snarling and snapping has started up again.

So what's the next SSB? Why digital methods of course. By creatively using both the time and frequency domains, we can effectively more than double the size of the cage once again and bring back a semblance of order and decorum to HF.

>After what happened with me tonight on 75 mts (3900 - 3908) I don't
>believe I'll be around that area for some time to come. I'd rather dig
>sewers than deal with that level of stupidity......major league dorks!

People are like that. Crowd them together tightly enough and their worst behavior comes out (just listen to any Dx pileup anytime). Stay out of their faces and they'll return to a semblance of good manners.

Since we'll need rule changes to allow digital methods (in this case adaptive DSS) to supplant SSB, and that won't happen quickly, let me suggest trying 160 meters for a while until the sunspots perk back up. Or switch from voice mode altogether and move to text based narrow band digital for a while. There are already permissible methods for increasing the throughput and channel sharing of text based HF digital systems that far outstrip simple RTTY or packet. Experiment with them and you'll find you have plenty of room.

So come up onto 1296, 2304, 3456 etc. MHz! I have the equipment but
there's no one to talk to up there except during contests.
They're our bands...why are only a few of us using them? It's certainly
NOT crowded! I think 2304.1 would be a great place for local ragchews.

>Ok, now I understand. It's the common point obtained by tying the
>bottom of the guys and tower together in a star which changes the
>configuration from a loop to a "mesh".

No. It's not a ground loop because there's only *one* current mesh.
To have a ground loop requires two (or more) current meshes that share
a common impedance. We'd have a ground loop if there were a *second*
mesh, that included some equipment we are trying to protect, that
shared a common impedance with the first current mesh. The common
impedance of the two meshes in this case would be either Rg1 or Rg2
depending on the topology. By connecting the guy grounds in star back
at the tower base, we drastically lower the value of the common impedance
and reduce any ground loop effects. If the star connections are low
enough in impedance, we can say we have effectively short circuited
the ground loop. The ground loop would still be *there*, it just
wouldn't have much of an effect because the common impedance would
be so small.

"Mesh" is just a way of saying "circuit" in analytic terms for
certain current paths. There's nothing more to it than that.
When we analyze a complex circuit, we break it into simpler
closed current paths and call each of those a mesh. We can
then analyze each mesh, noting any common elements with other
meshes, and then combine them all back together, using those
common elements as the interaction points, to get a complete
picture of overall circuit behavior.

A mesh with no shared common impedances with another mesh is
a closed circle, but it's not a ground loop. Earth is a giant
sheet resistance, however, and when we make a connection to
Earth anywhere, there will be a common impedance with every
other connection to Earth anywhere else. Mostly those common
impedances will be fairly high, and we can short them out by
doing a low impedance star connection between the points.

>In turn by tying the mesh into
>a the star at the house entrance panel eliminates the loop which might
>be formed between the two stars were they not connected.

Yeah. A star connection shorts out the common impedance needed to
have a ground loop. Note that we don't much care about absolute
potentials in any of this. We simply *define* one of our star
points as reference ground. All we really care about is potential
values *relative* to that reference point. If we arrange our
wiring topology right, we can keep those relative potentials to
a minimum.

In point of fact, *all* potentials are relative. We just aren't very used to thinking of them that way. We tend to take "ground" as zero volts, but of course it is only if we define it to be. And if it has any impedance at all, we can only define it to be zero at *one* point. That's our single point in our grounding system.

Let me take a moment to explain where the term "ground" came from. When we say "ground", we really mean *ground potential*. All potentials are referenced to this ground potential. This idea is modeled on the idea of a weight suspended above "the ground". The higher the weight is above ground, the more gravitational potential energy it has. The closer it is to ground, the less gravitational potential energy it has. When it is sitting on the ground, we say it has zero gravitational potential energy. We could have the weight suspended above a table, and the table would become "ground". Ground is the potential reference, the defined zero state. This concept was well known when electrical physics started, and the term "ground" just carried over. We shouldn't confuse it with Earth. Earth is a non-homogeneous sheet resistance. No two points on Earth have the same potential when currents are flowing between them. Earth is not ground, though we can pick a single point on Earth and *define* it as ground for some particular circuit. But we can also pick some point not on Earth and define it as ground instead, and we usually do because we can arrange for that point to be tied to other points via simple low impedance paths that can be easily analyzed and controlled.

>be amateurs, of course. Amateurs can't perform paging for the
>general public.

After I posted my response to the original inquiry, I saw and knew I was
going to catch some hell because I was too vague. But the orignal inquiry
was pretty vague. I repsonded as I did because the original post indicated
that the only reason that he was curious about moving such a device into the
ham bands to increase range. I have seen similar inquiries about 900 MHz
cordless phones and figure, yeah - go ahead but then only yourself or other
designated, licensed amateurs could use it. BTW the Radio Shack personal
paging system operates at 27 MHz, and we can't run auxilary stations
any where near there. And you are correct that both the transmitter and the
receiver must be Amateur stations.

You could call "CQing" a paging operation but I would refer to it as a
calling operation - one way transmissions for the purpose of establishing two
way communication. Just like any other call. Perhaps what we call it is
no important. If you plan to operate a simple paging system for this purpose
- fine.

n8fow@wireless.org (Ron Atkinson) wrote:
>Sure you can. Many repeater controllers even have paging capability. I also
>have a Motorola pager here that's crystalled up on 147.180 Mhz and someone
>can get on the repeater, punch in a code, and it'll page me. It's legal and
>is done all the time.

The controller on our repeater will do this also - send two-tone paging, and DTMF signals - and there are two way radios that will respond to these signals as well as pagers. Since all parties in your example here are Amateurs, I would assume that your "paging operation" is used as a selective calling system for establishing two way communications. I would not consider it telecommand. And if you consider paging to be auxilary operation, as Gary mentioned above, you need to get it off of 2 meters.

Hopefully I clarified what I meant here. I would not want this to turn into another long running, "beat it long after died" thread. I am well aware that Amateurs can engage in certain, one way operations, as I do, but I interpreted the orignal inquiry to be disussing something that would not qualify.

I hadn't been on the air for some time and
just lit up my Kenwood 690 to see if anything
was on 6 meters tonight and I found the band
literally hopping with lots of QSO's going on.

I tuned in at about 0200Z (6/18/95) and heard
WD9EXD (EM57) as well as WA4AUX (EM65).
I eventually worked several new grids
before the band died at around 0300Z.

At one point, there were QSOs just about every
5KHz up to 50.200.

75 mtrs is getting more and more loaded up with people operating on their own private frequency. The other bands are falling asleep during this propagation low, and so they go to bands that are still flipping and flapping with life, be it as low as it gets, claiming a frequency and then talking for hours, upon hours about chitty chatty nothings, whining and bragging and really having a ball with their small brains. If everybody else doesn't enjoy exactly what they enjoy, then they are garbage and shouldn't be on the air. There's room for everybody on all the bands. I can see wanting to talk with your buddies on the same freq night after night, in the comfort of you own home, in your underwear, with your own brand of libation. That sounds like a hell of a deal for the folks that are a problem to look at, or smell, or are in other ways difficult to be near. I can't see running a "woodpecker" that is 15 kcs wide to make your private frequency know to all who crowd it. I can't see running a mike with the gain turned all the way up to splatter the daylights out of everyone in the neighborhood, which is quite crowded mind you, just to let them know you don't like them transmitting so near as to create a little garbage on your private frequency. This all occurs after the usuall assortment of "I was here first" and "You're supposed to allow 3 kcs" and "Please QSY" and "We've been meeting here for 47 years, take a hike bonehead" etc. etc. etc.

There used to be intellegent people on ham radio. Now we got an entire spectrum loaded with havoc, self serving lonely people, self righteous abuse, and lack of patience and consideration. Is this what the internet will be like 40 years from now??

After what happened with me tonight on 75 mts (3900 - 3908) I don't believe I'll be around that area for some time to come. I'd rather dig sewers than deal with that level of stupidity......major league dorks!

larryf@pacifier.com

5199. Re: Music on Hold over an autopatch?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-18 00:00:00 UTC
From: Ed Ellers <edellers@delphi.com>
Message-ID: <5G18ucb.edellers@delphi.com>
Source record: 244451

R. Wiley <rawiley@blue.weeg.uiowa.edu> writes:

>Didn't we go through this in the 50s when all
>Amateur Radio stations were required to have
>an AM broadcast radio operating in the station
>at all times when it was in use.
>
>(640-1240 CONELRAD)

Hams (and others) were required to monitor a broadcast station, *but* they were definitely not supposed to retransmit its audio, directly or indirectly! (That, plus the difficulty of listening to the other ham and the AM radio, led many hams to use special alerting devices that would go off if the AM station's carrier was lost -- fortunately the old CONELRAD alerting system required the station to cut its carrier for five seconds, put it back on for five, cut it off for five and then play the tone for fifteen.)

The one exception I know of was that a mobile unit in a land mobile system didn't have to monitor CONELRAD itself -- its base station could monitor and was allowed to transmit to order the mobiles to stay off the air. There were probably other exceptions for other services.

>and the controls on the dash. If you buy a Kenwood, however, and someone
>steals the faceplate, you're screwed because Kenwood doesn't sell replacements.

I believe that removable-faceplate HT is set up so that, instead of buying a speaker/mike for it, you'd buy a special extension cable allowing you to use the faceplate as a remote control speaker/mike. (Which, of course, is a good way to persuade one not to buy an aftermarket speaker/mike from Ramsey, MFJ or whoever.)

5201. Listing of Mac Ham S/W from ftp.demon.co.uk

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-18 00:00:00 UTC
From: Sean Sharkey <sean@g0oanint.demon.co.uk>
Message-ID: <9506171134070040@g0oanint.demon.co.uk>
Source record: 244453

17/6/95

The following programmes are now available from,

ftp.demon.co.uk /pub/ham/mac

****

ANT RAD PLOT.sea
2K Basic programme plots vertical radiation pattern for dipoles at
any
given height.

BROADCAST v2.0.sea
150K Packet program for use with PACSATs.

CODEMASTER v1.34.sea
27K CodeMaster 1.34 - demo version of CodeMaster 2.34 - morse code and
ham
theory test application. This version is somewhat functional.

CONTEST DUPER v5.1.sea
70K Checks your contest log for duplicate entries.

CW CHART.sea
3K Copied from Usenet - a morse code (CW) tree chart.

DXCC by Callsign.sea
30K DA which lists all the DXCC countries in order of callsign.

DXCC by Country.sea
30K DA which lists all the DXCC countries.

EZ DOVE v.002.sea
55K EZ Dove decoder (v.002). Appl and Basic source, decodes Dove
telemetry
data.de N5KOB.

GRID 1.0.sea
9K Converts longitude/latitude to grid QTH

HF PACK TUTOR.sea
9K Tutoral on HF packet radio - interesting

HF_DistributionFiles.sea
HF_Synch is a powerful step forward for those Amateur Radio operators
or Clubs that wish to engage in more reliable point to point
communications. HF_Synch eliminates the older and more antiquated
method of making up frequency versus time lists that Amateurs were

forced to rely on in the past. Take the instance of John - N1ZZZZ and Mark - N1YYYY who have been communicating back and forth for three months by getting on at 4:00 PM each day and checking frequencies 14.247, 14.253, and 14.288 megahertz for each other. As is the case with the crowded radio spectrum, John and Mark are often forced to forgo meaningful conversations because of nearby QRM or worse a station operating directly on one of their chosen frequencies. Enter HF_Synch a computer program for IBM and Macintosh computers.

HAM ART.sea
11K Assorted ham related artwork. ARRL and AR TIFF logo, IC-735 front(MCDW)

ICOM & MACS.sea
1K Info for Mac & ICOM owners looking for software to link'em

IM/Mac v1.0b27z.sea
200K SMTP mailer for use with NET/MAC.

KISS_TLM.sea
50K For decoding KISS data from MICROSATs.

MacAPRS.sea
Complete set of APRS software for the Macintosh including maps and airport data.

MacContest 4.0.sea
300K The ultimate contest logging program for the Macintosh (System 7 proof). Covers CW/SSB/RTTY modes and all bands from 1.8 MHz to 5.7 GHz. Allows real-time or post contest logging for a wide variety of contests (30 contest include, new ones can be added). Checks for dupes, figures scores instantly. Offers various printouts (sorts per band, alpabetically, labels etc.) Interfaces to TNCs (KAM, PK-232) for CW, RTTY and packet modes. Built in terminal mode and packet DXcluster interface. Interface to Kenwood transceivers for automatic band/mode logging. MacinTalk voice output for real-time logging as well as to ease post-contest entry. Option to capture log in realtime to printer. Option to simultaneously create a save copy of the log to a different file/drive. Timetable showing actual grayline on a world map. (I have the demo version which will allow you to make 50 contacts). MacContest is free but must be personalized to each user
(otherwis it's limited to 50 contacts). To get a copy send a 3.5" diskette and
a SASE to Gerald Eberle, HB9CEY, PO Box 13, CH-4417 Ziefen, Switzerland. Moritz (HB9BLZ) can act as a message forwarder for Gerald.
Moritz' e-mail address is: gysslerm@saturn.kau.roche.com

MacFAX2 v1.1.sea
20K Will allow you to receive WEFAX pictures in your PK-232.

MacIcomControl.sea
43K MacIcomControl is an application which allows a Macontosh to
communicate with and control an Icom radio. The radio must have a CI-V
interface port. This is usually obtained with a UX-14 option.

MACMORSE v0.2.sea
30K Another program to learn morse code

MACMININEC v3.13.sea
250K For analyzing antenna disgins,including dipoles, beams, etc etc.

MORSEMAC DA v2.0.sea
17K A program to learn Morse code . It sounds a preset number of
characters
randomly choosen. it contains an XCMD written by LX1YZ

MORSE v1.3.sea
20K Morse tutor up to 25wpm, very good.

MacSAT.sea
120K. Sat tracking programme. Might be better than OrbiTrack on Macs
with 9" black and white screens.

MAC SHORTWAVE v1.sea
90K Shortwave propagation predictor.

MacSPOC v1.1
188K MacSPOC, flew aboard the Space Shuttle for the third time in
October 1992. MacSPOC keeps users apprised of the Shuttle's current
location on a world map and updates several digital displays, such as

mission elapsed time, in real time.For the past 3 years, the author
has been
uploading daily trajectory updates during Shuttle missions to MacSPOC
users on AppleLink®, America OnLine®, and Internet. After one of
these "checkpoint" updates is downloaded as a MacSPOC document,
it's just a matter of opening it. Users are then placed "in synch"
with the
Shuttle mission to the accuracy of their system clocks.
No data entry is necessary. Details included with docs.

NET/MacStartersKit.sea
500K A complete starters kit for the Mac user interested in trying
TCP/IP.
Includes everything that you will need to get going.

NET/Mac v2.3.39.sea
500K This is a version of TCP/IP. Will allow you to use AX25, NETROM,
FTP,
TELNET and SMTP with packet radio

ORBITTRACK (2 versions)
514K This is one of the best Shareware progarmmes I have ever seen. If
you are interested in tracking sats you need this. Comes in two

versions, one for use wit
Macs that have a FPU processor installed and one which will run
without a FPU for
those that don't.

PACKET(1-18).sea
43K Introduction to packet radio - Parts 1 thr 18 by Larry Kenney,
WB9LOZ

PacketTracker 1.04.sea
110K PacketTracker ver 1.04 is a program that monitors packet
activity
and keeps track of what is going on. It draws a graphical map
showing who is talking to who and displays statistics of all current
stations and keeps a running tally of activity. You will be
able to see graphically what stations you can hit directly and which
ones he cannot. For the network manager and BBS operator,
PacketTracker provides extensive insight to the operation of the
local network and problems such as excessive retries on a path. It
also allows for extensive logging of channel utilization and other
pertinate information.
NOTE: This application requires the Apple's Serial Tool from the
Communications Toolbox System 7

PROJECTMAC A1.sea
105K ARRL's Project Mac software - part A1 (These are looking a bit
old now)

PROJECTMAC A2.sea
118K ARRL's Project Mac software - part A2 (These are looking a bit
old now)

PROJECTMAC B1.sea
103K ARRL's Project Mac software - part B1 (These are looking a bit
old now)

PROJECTMAC B2.sea
107K ARRL's Project Mac software - part B2 (These are looking a bit
old now)

QUICKTERM.sea
Another of Gerald Eberle, HB9CEY contest/dx programmes. This one is a
AX25
terminal programme for use with the DX cluster.

RADFAX 09.sea
173K WEFAX programme that uses the mic input on new Mac. No other
hardware required,
just plug output from HF rig into Mac mic socket and away you go.

SAVANT 1.0.2 Demo
185K AX25 packet terminal programme that will work with SoftKISS,
in other words it will allow you to run a Baycom modem on the Mac.

This is now a commerical programme but the demo version will let you set it up, send a limited number of frames and see it working etc etc.

Scopes.sea
Information on Selecting Digital Scopes. Hypercard stack

SWGTCP.sea
Short Wave Guide The Computer Program (SWG TCP) is designed for the short wave listening hobbyist. SWG TCP has many features, which include:

- A modifiable Short Wave Broadcast schedule.
- LUF & MUF Predictions.
- Gray Line.
- Logging.
- Remote Radio Control.
- World Time.
- More:

SoftKISS 1.8.sea
This will allow the use of dumb modems with the Mac, ie the BayCom series
of kits.

STARTING IP v3.0.1.sea
14K The Getting Started with (Mac) TCP/IP text file for beginners

SUNTIMER.sea
130K One of Gerald Eberle, HB9CEY contest/dx programmes. Shows Grayline
on world map, distance, bearing, DXCC callsign lookup table, very very nice programme.

TALKTERM 1.1.sea
50K For use with DX clusters. If used along with MacinTalk it will announce
DX spots as they arrive on the cluster.

Various Logs.sea
200K Includes,
FileMaker Log, 5K FileMaker IV document will provide excellent general logging.
HamLogger, 10K HC stack for logging ham contacts - very nice.
Logging Stacks UK, 100K Keeps all sorts of logs. From contest, to local directory.
Logging Stacks USA, Same as above but with USA bandplans.
MacLogger, Very nice programme for checking contest entries.
SWL Logger Stack.

Virtuoso v1.4.sea
68K A very nice standalone packet terminal programme for use with any TNC

World Radio v1.8.sea
260K Radio control programme for Kenwood radios includes,
Kenwood Radio Interface, Station Log Database, World Map Display,
DX Call Sign List, Antenna Rotor Control, Radio Memory List,
UTC Clock Display, very nice.

World Clock Lite.sea
108K What time is it in Alice Springs Australia ? How far away is
London ?
Is it daylight or night time in New York ? Is it night all the way
from here to Cario?
The World Clock desk accessory has the answers to all these questions
and
many, many, more. Looks good to.

ZTerm.sea
263K Comms Terminal programme for the Mac. Nice and easy to use. Comes
with
sound updates.

****
******

HYPERCARD STACKS.

Advanced 2.2.sea
132K HC stack - Ham advanced test.

CHESS-STACK.sea
143K Yep, someone had to do it. HyperCard stack that will allow two
Macs to play chess via packet radio.

DXMAP v1.1.sea
150K Shows grayline in real time, also has a data base of all
callsigns and
will show location and bearing from your QTH on world map. Very nice.
Can
only can only be used with version 2 or higher of Hypercard.

Extra 2.2.sea
127K HC stack - Ham extra test.

FreqValet Demo version.
203K Provides frequencies and DX program info for shortwave radio
listeners. The program databases update automatically at 15, 30, or
60 minute intervals, thus providing a continuous display of
broadcasts on-the-air at any given time in a spreadsheet like
format. Features include sorting of data, scanning, and on-screen
changing of databases. The program will convert Tom Sundstrom's
dBase shorwave broadcast listing to FreqValet format and will do the
same for Shorwave Navigator users. Separate cards are provided for
DX Programs, Ship to Shore, and Utility broadcasts. Computer
control modules are available at extra cost for the Drake R8,
Kenwood R-5000, JRC NRD-525, and NRD-535 receivers.

General 2.2.sea
93K HC stack - Ham general test.

GRAYLINE.MAC.sea
70K HC Shows world grayline in real time.

HyperFT747GX.sea
250K HyperCard that will allow you to control your FT-747 via the
RS232
interface. This stack should be pretty easy to modify to work with
other
transceivers. It also now comes in a coloured version

HyperFT990.sea
250K HyperCard that will allow you to control your FT-990 via the
RS232
interface.

Mac525B1.1.sea
100K HyperCard stack for controlling the JCR525 radio via the Mac's
RS232 port. Works pretty fast as the scripts are very well written.
Includes
Database of memories.

Mac5351.1.sea
100K HyperCard stack for controlling the JCR535 radio via the Mac's
RS232 port. Works pretty fast as the scripts are very well written.
Includes
Database of memories.

NOVICE 3.2.sea
128K HC stack - Ham novice test.

SSB.sea
500k With this one you can record your own voice, using MacRecorder
or
similar and then at the click of a mouse call CQ, QRZ, etc etc.

Tech 3.3.sea
108K HC stack - Ham tech test.

Trans.Stk v1.0.sea
32K A stack I made for transmission lines, giving attenuation, SWR,
etc

Various Logs.sea
200K Includes, FileMaker Log, 5K FileMaker IV document will provide
excellent general logging. HamLogger, 10K HC stack for logging
ham contacts - very nice. Logging Stacks UK, 100K Keeps all sorts of
logs. From contest, to local directory.

Logging Stacks USA, Same as above but with USA bandplans.
MacLogger, Very nice programme for checking contest entries.
SWL Logger Stack.

KQI Control v1.sea
53K Hypercard stack that will allow you to control a Kenwood TS-940S
via
it's RS-232 interface. However the author feels that it should work
with most
of the Kenwood range of transceivers.

Macnet rouster v 631
Worldwide database of Ham Macintosh users.

Mac To PC.

ZIP.sea
Will allow ZIP or PKZIP files to be exchanged between Macs and PCs.

5202. Philly folk fest [freq?]

SIGH! Gary, you REALLY know how to whip a dead horse,
don't you!!!

Now why don't you drop this crap and say something constructive?
When it was said the first 2-300 times this was sort of interesting
but the discussion has now become boring, stupid, repetitive and
quit honestly I am sure that I speak for most readers here, we'd rather
you moved on to a new topic now!

GC>The exam requires you to know something about satellite operations
GC>and antennas because you are permitted to operate through satellites
GC>or via antennas, but the exam does not require a *demonstration*
GC>of working through a satellite or of erecting an antenna. The assumption
GC>is that if you actually want to do those things you'll gather the
GC>necessary skills, which you demonstrated you were aware were required on
GC>the exam, as you need them. Only the Morse exam requires a demonstration
GC>of use of an operating mode, and only Morse is a stand alone pass/fail
GC>element. You can miss every question on satellite operations and still
GC>pass the exam. You can't do that with Morse. If the Morse portion
GC>of the exam were like the satellite questions, IE showed you were aware
GC>of the principles behind Morse mode operations, then no one would be
GC>complaining. But that's not the case. Instead we have a series of
GC>pass/fail speed runs that signify little or nothing but rote wetware
GC>conditioning. You could still be so ignorant of the basic encoding
GC>principles that you might even confuse Morse encoding of alphabet
GC>with language, or think that Morse encodings of OOK signals "get
GC>through when nothing else will", which are both false, but you'd
GC>have your license, ignorance intact, because of a demonstration of
GC>rote mechanization of a modem in wetware. The current exam structure
GC>equates modem mechanization to the entire combined total of every
GC>other facet of amateur radio. That is so out of balance, and so
GC>patently absurd, that it should be obvious to anyone that something
GC>needs to be done about it.

>Although I am loath to comment on the U.S. licensing and certification
>structure, I believe that the objectives for the CW and technical testing
>are significantly different. As they are significantly different, it
>does not follow that to discontinue the testing of one means that the
>other should also follow. The bottom line for the need of testing is
>that it is mandated by the ITU Radio Regulations. Although the Japanese
>have amateur classes that do not required Morse code testing, seemingly
>to violate this regulation, the technical restrictions are such that, in
>the opinion of the Japanese authorities, international interference is
>mitigated, as permitted by the same Regulations.

When were the ITU Radio Regulations passed by the House and Senate and then signed into law by the President?

We are a free and sovereign nation, not a vassal of the UN or any agency thereof. So is Japan; so is Canada. As far as I'm concerned, if Washington or Ottawa decides to drop the code test, Geneva can get stuffed.

>The objectives for the written technical examinations are different,
>regardless of the country of origin. One commonality, again despite
>national differences, is the mitigation of amateur service interference.
>This is the only means that the administration have to ensure that an
>individual has the competence to operate an amateur station and will not
>at the same time be a source of harmful interference.
>
>Therefore, because of the differing objectives of the tests, it would be
>folly to discontinue technical testing if CW testing were to be
>discontinued.

My sentiments exactly.

I assume you're talking about 28.3-28.5 MHz. Unless the rules have changed,
only a Tech+ can use that range, not a Tech-

> There is a system of "Linked" repeaters in California, Airizonia, Nevada,
> and New Mexico. I think it's called the "Condor Connection". It is possible

> system.

We too have a system like that up here in the Northwest called the
Intertie. I believe it is on 145.33 MHz, and connects repeaters up the
I-5 corridor between Portland, OR & Vancouver, BC, and along the I-90
corridor from Seattle, WA to Bozeman, MT, and maybe Billings. However,
it's rare that the entire linkage is engaged.

>They're our bands...why are only a few of us using them? It's certainly
>NOT crowded! I think 2304.1 would be a great place for local ragchews.

I'm active on those bands (except 3.4 GHz). They aren't suitable for regional conversations, unless we slap up a bunch of repeaters which currently don't exist (not a bad idea in itself, though we should probably shoot for a cellular system instead). 75 meters is suitable for regional conversations without external aids like repeaters or cellular networks. You can have several stations scattered over a 1/4 of the continent all participating in a 75 meter QSO. So it represents some pretty prime real estate for people wanting that kind of activity.

160 meters is another option for some, but the antennas begin to daunt them if they live on small lots. Amateur satellite operation is an even better option for others, though the AO-13 transponder is beginning to sound like 20 meters at times now. All those should be pursued where appropriate.

The thing is, the amateur service is growing (a good thing IMHO) and we're going to increasingly see more and more crowding on the popular bands. This is true on 2 meters too. While we need to encourage people to move off to other bands where practical, we also need to address more efficient ways of accomodating people on the currently popular bands as well. DSS is one way we can do that. Like the switch from AM to SSB, it effectively increases the capacity of the band to allow people to do what they want to do, communicate with a group of others over a diverse geographic area.

We could just force everyone back to CW, but the Q factor on CW is so low that the bands would have even less utility then than they do now. We need a method that is both information rich and able to work gracefully under crowded conditions. DSS is one such system. And the best thing about it is that you don't need the cooperation of a lot of others to make it practical. It can

grow one pair of stations at a time right in the midst of existing operations. All we need is regulatory clearance and we're in business.

Gary

Yep, and it's probably one of the larger contributions to
international goodwill that the US does. It gives amateurs
in other countries a place where they can converse free
of US Dxers pestering them for a post card.

Ok, so explain the capability of some radios to transmit alphanumeric
messages.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 JUNE AND FORECAST FOR 19 JUNE - 21 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 17 Jun
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
19 Jun 20 Jun 21 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 19 Jun: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 17 Jun
Learmonth 8 2233 2211
Fredericksburg 14 5
Planetary 18 5

Observed Kp for 17 Jun: 2212 1222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
19 Jun 13 Quiet to unsettled
20 Jun 16 Unsettled to active
21 Jun 13 Quiet to unsettled
COMMENT: Some brief activity observed during local night last night.
Active levels are expected on 20 June.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
19 Jun normal normal fair
20 Jun normal fair poor
21 Jun normal normal fair
COMMENT: Conditions at high latitudes are expected to become
degraded 20-21 June.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
18 Jun 29 near predicted values during local day, enhanced 30%
during local night.

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
19 Jun 25 Near predicted monthly values
20 Jun 20 Near predicted monthly values
21 Jun 15 Near predicted monthly values
COMMENT: Degraded HF comms may have been experienced during local
night. MUFs at Townsville and Hobart were near predicted monthly
values. Degraded HF comms may be experienced for southern regional
Australia during interval 20-21 June.

5211. Need 50 mile range on HF

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-18 00:00:00 UTC
From: dan@guardian.tessi.com
Message-ID: <3s2i39$78g@guardian.tessi.com>
Source record: 244463

My wife and I are hams and have need to keep in
communications while I am on the coast. The
distance from Portland is roughly 50 miles and
we have found that the 2-meter repeaters don't
afford the flexibility or privacy we need to
discuss matters that the rest of world has
little interest in. I have a HF SSB rig and
was curious if a 80-10 meter link with a
mobile rig like the TS-50 or Icom 706 would
work out for us. Has anyone tried 50 mile
QSO's during the day on any of these HF bands
with success ? I suspect 40 meters might work
out as a good choice, but how about daytime
80 meters or 10 ? I just don't have a feel
for reliable communications for such a short
distance.

suggestions ?

From: ku9c@aol.com
Message-ID: <3s2kgt$1i2@newsbf02.news.aol.com>
Source record: 244465

Bob,
I'm still awaiting the qsl card that will be used for the xx9x operation....as soon as it's available (i expect it REAL soon) the cards will go out within a week.

Sorry for the delay, but we wanted to make up a real nice card commemorating the XX9X "Macau COntest team" and the picture will show the QTH (and hopefully, some part of the 160 meter atnennas...HI).

How much heat sink do you plan to use? Have you figured out how
much heat the LM350K is going to dissipate in typical or extreme cases?

5218. Ohio/Penn DX Bulletin #211

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-18 00:00:00 UTC
From: kb8nw@barf80.nshore.org
Message-ID: <$opdx.211.1995@ampr.org>
Source record: 244470
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

SB DX @ ALLBBS $OPDX.211
Ohio/Penn DX Bulletin No. 211

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 211
BID: $OPDX.211
June 19, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N4AA & QRZ DX, W4/YV5DTA, N3ADL, AA8SM, DL5EBE, JH2PDS/1, OD2DYL, VE2ZP, XE1HBU 3A2LZ and 425 DX NEWS for the following DX information.

3A, MONACO. Daniel, 3A2LZ, reports that a few pirates have been active from his country. 3A50A has been quite active on the bands lately. However, this call has NOT been issued and is a pirate. Another station that occasionally shows up signing 3A2CC is also a pirate.
Daniel also mentioned contacts made during June 10-15th with the Rotary Amateur Radio Society (ROARS) special event station 3A2RAR should be QSL to 3A2LZ.

BS7, SCARBOROUGH REEF. QRZ DX by Carl, N4AA, reports that Wayne, N7NG, states that another license (BS7A) has been obtained from the Chinese authorities and another operation from here will take place after this year's typhoon season. There will be an international team of operators which will include N7NG, ON1RY, SM7PKK, JH4RHF and two other additional operators to be named probably later.

EH, SPAIN. The 425 DX News reports that about 140 Spanish stations are now authorized to operate on 6 meters. They are allowed to use the frequencies between 50.000 and 50.200 MHz only in CW/SSB and with power less than 30 watt. The Spanish stations change their prefix when operating on 6 meters, from EA to EH.

JW, SVALBARD. Dominik, DL5EBE, will be here as a member of a scientific expedition of the Norwegian Institute for Biology and Geology Tromso, from July 17th to August 10th. His callsign will be JW0K. While using an IC-735 and a ground-plane antenna, he will be active on 40-10 meters mainly on CW and RTTY. Four different camps for geological field-work will be established which can be reached only by helicopter. Signal strength may depend on the location of each camp and power supply. Of course the scientific research program has first priority, but in his

free time he will try to work as many stations as possible. QSL for JW0K via DL5EBE direct or via buro. By the way, Dominik is the DX-editor of CQ DL (a national club magazine of the DARC).

OOOPPPSS DEPARTMENT!!! Last week's bulletin (OPDX.210), I listed "XY0Y and XY0Z" in one of the titles and it should have of been "XR0Y and XR0Z". I bet that got some people shook-up. Sorry, your editor needs a vacation. Speaking of vacation, look out L.A. I will be there the last week of July hopefully to see the Cleveland Indians play the Angels...

PY0TUP CARDS UPDATE (by Dieter, OD2DYL). Dieter reports all QSL requests which have been sent to his address since May 2nd have been sent to Brazil. All cards arrived well in Brazil and have been processed. Dieter states that the PY0TUP QSL cards are on the way back to Europe and this means that everybody will get his QSL from Trindade Island in the next few weeks. You will receive your card in the mail if you sent Dieter two green stamps (US) plus 2 IRC's and a SAE (otherwise it will be sent through the bureau). A second QSL collection is now running until July 15th. So anyone wanting help with receiving a PY0TUP card, send your request to OD2DYL until that date. Please remember Dieter is NOT the QSL Manager for PY0TUP, and he does not have the logs! After July 15th, all cards should be sent to: Joao B.G. Mendonca, P.O. Box 3100, RJ 20001-970 Brazil

SPECIAL PREFIXES (by Canada). Industry Canada Atlantic Region has authorized all Canadian Amateurs to use special prefixes to mark the 50th anniversary of the end of the World War II in Asia. From 0000z July 8th though 2359z September 8th, Canadian Amateurs may use special prefixes as follows:

Regular Prefix	Special Prefix	Regular Prefix	Special Prefix
VA2	XK2	VE6	XK6
VA3	XK3	VE7	XJ7
VA7	XK7	VE8	XK8
VE1	XK1	VE9	XK9
VE2	XJ2	VO1	XO7
VE3	XJ3	VO2	XO8
VE4	XK4	VY1	XN7
VE5	XK5	VY2	XN8

T2, TUVALU. After a few delays, Masa, T20XC, has finally become active as T20XC. Reports also indicate that Masa has extended his stay on Tuvalu until June 23rd. He has been very active on CW and RTTY.

TN, CONGO. Tomo, JH2PDS/1, reported that the Tokyo Packet Cluster had a few QSN reports of activity by Hazel, TN7OT. She was heard on 14226 kHz around 2000z. The GOLIST indicates to QSL to: Hazel, BP 12, Impfondo, Republic Congo, Africa.

V2, ANTIGUA. An early announcement by Doug, N3ADL, states the members of the Frankford Radio Club will be active in this year's CQWW DX Phone Contest (October 28-29th) using the call V26B. QSL V26B to WT3Q. Doug

plans on being active before and after the contest (as time permits) on the RS-12 satellite and he will also concentrate on 12 and 17 meters as V26DX. QSL via N3ADL.

XF4, SOCORRO ISLAND (Revillagigedos). Parcival, XE1HBU, reports a group of XE stations were to be active as XF4RTD from June 17-19th, but there have not been any QSNs reports as of yet on the Ohio/Penn Network. This group planned to be active on 160-10 meters, including the WARC bands, SSB, CW and RTTY. Also VHF/UHF multimode activites were planned for 6m, 2m, 70 cm and 23 cm and with operations on the following satellites: RS-10, RS-12, RS-15, AO-10, AO-13 and AO-20. QSLs via XE1TD, Club de Radioaficionados de Occidente, P.O. Box 1-197, 44100 Guadalajara, Jalisco, Mexico. There is also word that a second operation is planned for July 1-19th. Details are still sketchy on this one.

YW5, LA ORCHILA ISLAND (VENEZUELA). Steve, W4/YV5DTA, reports that the Caracas DX Group will be active from here as YW5LO, starting July 13-16th. La Orchila has an IOTA number of SA-054. QSL Manager TBA.

ZB2, GIBRALTAR. Dave, N7RK, has announced that his ZB2 operation planned for the last week of June has been cancelled as the business trip which would have sent him to Europe was cancelled. He may try again in the fall.

ZL8, KERMADEC ISLAND. Scott, AA8SM, reports recieving a phone call June 8th from the individual that is organizing the next ZL8 operation. This person told Scott that (if things go as planned) the operation will take place in November 1995, but no exact date was given. The funds presently are the current problem, but if it doesn't happen in November 1995, then it will not happen until May 1996. This is because the boat that goes to Kermadec Island only goes there every 6 months to drop off supplies to those scientists that are on the island. Permission to operate has been granted as of June 8th, but no permission had been issued to land on the island (this is still in the works). Scott is currently conducting a ZL8 survey pertaining to individual's needs (bands, modes). If you would like to particapate in the survey, send the following form to: Scott Long AA8SM, 127 N. Fulton Ave., Newark, Ohio 43055

****

Call_____

160___ 80___ 40___ 30___ 20___ 17___ 15___ 12___ 10___

SSB___ CW___ RTTY___ Satellite___ Other_____

QTH: (EC=east coast, WC=west cost, EU=Europe, AS=Asia, etc._____

****

All of the survey forms are being forwarded to those who are heading up this next operation.

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and

after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

From your statement I gather that you have never made a single CW-QSO in
your life, otherwise you would not ramble about as incompetently as you
did. Your statement with regard to satellite operation says that "The
assumption is that if you actually want to do those things you'll gather
the necessary skills, which you demonstrated you were aware were required
on the exam, as you need them." Well, fact is that you neither need to show
that you are able to do the stuff you hear. And apart from that, anyone,
who thinks that being able to decode CW makes you a code operator is either
stupid or ignorant. Having passed the drivers license, would you say that
you are a competent driver? Or would you say that it takes you a lot of
practicing and experience to get you there. It took me years to become a
good code operator and looking back to my exam I would say that it had as
much in common with real HF-practice as questions about satellites have in
common with actual satellite operation.

Oh, BTW, you can fail morse and still pass the exam. It's called no-code/Tech.

>

As you are probably already aware, Canada and the U.S. have a reciprocal
aggreement with regard to using your amateur radio gear in Canada.
All you need to do is append the /VEx suffix onto your call, the x being
the number that designates the province you are in.
For example, if you are in the province of Ontario and your call is
WB2HAM then you would ID as WB2HAM/VE3.

Regards...Hugh VA3TO Toronto

More like, aside from the fun and mental stimulation of CW operation that
some actually enjoy (like myself), there are some modes of operation in the
hobby where CW is a must (YES...still...in the 90's !!). For example,
working weak signal stations on V/U/SHF where voice can't cut it but CW can,
also during an Aurora on VHF and up, voice signals can be too distorted to
make out but CW signals start to sound like a burst of static rather than a
tone but are still workable. Also EME (Earth-Moon-Earth) AKA Moonbounce
operators usually use CW since the signals are very weak and the noise floor
is very high, CW can be distinguished where voice cannot.

What logic do you base this assertion on? I'm an Extra, I don't make
money from amateur radio, and I can't see one bit what I have to
gain from the reform of CW testing. How can you refuse to believe
this? What evidence and/or logic supports your belief?

Did I say that? I certainly don't remember saying it...

My point throughout this thread is that simply changing coordinators will not miraculously solve all the problems. It may solve some of them, but it will not address the closed repeaters which were the issue at the beginning of this thread.

|>
|> Can anyone tell me how to ID while I'm in Canada?

Thanks to everyone who responded.

I noticed that the list of VE# was only sent to me via email, so I'll
post them here for anyone else who needs them:

Newfoundland VO1
LABRADOR VO2
PEI VY2
NS VE9
NEW BRUNSWICK VE1
QUEBEC VE2
ONTARIO VE3
MANITOBA VE4
SASKATEWAN VE5
ALBERTA VE6
BC VE7
NWT VE8
YUKON VY1

Since I'll be going from West to East, I'll be IDing as:

N7RFA Mobile VE7, VE6, VE5, and VE4.

Again, thanks to everyone for their response.

cdm006@email.mot.com (Dick Magerl) wrote:

Can anyone provide a table listing the timezone letters
and the corresponding offset from UTC . . . ?

Z = UT (GMT)

A = UT + 1h (east of UT)
B = UT + 2h
C = UT + 3h
. . .
I = UT + 9h
K = UT + 10h
L = UT + 11h
M = UT + 12h

N = UT - 1h (west of UT)
O = UT - 2h
P = UT - 3h
. . .
V = UT - 9h
W = UT - 10h
X = UT - 11h
Y = UT - 12h

Note that the letter "J" is not used to designate a time zone.

Note, also, that the definition of timezone letters in ARPA RFC 822 (the
Internet e-mail header format standard) is in error -- the signs are
reversed there. This error is acknowledged in RFC 1123, sec. 5.2.14.

>KHz (not sure of the exact frequencies) but it is license free down there
>with the restrictions you mention. The fifty feet is from the
>transmitter to the tip of the antenna.

Also, the power limit is 1W DC input power to the entire transmitter (I think;
might just be the final amplifier). Commonly the transmitter is placed at
the base of the antenna itself (which can then be raised as high as you
can get), with the modulation being set up the feedline (keying or voice
or whatever).

>Any transmissions anywhere in the ham bands require a
>license..."period..dot." to quote Capt. O'Grady. ;-)

I *think* it's possible to operate under the license-free regulations (what
is it, Part 98?) in the ham bands -- but part 98 radiated power limits are
specied in terms of field strength, on the order of a couple hundred
*micro*volts per meter at several meters distance, which tends to work out
to *nanowatts* of effective radiated power. The LOWFER band is a much
better bet. It's also very easy to homebrew effective equipment for, since
it's just very high-frequency audio :-).

5229. 17 Meter Expansion

I was reading the mail a few days ago and heard a couple of guys talking about 17 meters. The drift of the QSO was about the discussions and/or potential petition for the expansion of the 17 meter band. Severe fade prevented me from really catching it all. Does anyone have any info on this. I for one would be happy if this happened - 17 is such a great band. When its open, you have world wide dx with a 100W or less!

..as for the mysteries of the
Universe...they knew them not...

And in the time of their visitation they shall shine, and run
to and fro like sparks among the stubble.

Your student gets a F. He failed to mention that the Amateur Service once held the entire spectrum, from 200 meters all the way down to light! The situation changed once the greedy broadcasters discovered that shortwaves were actually better than longwaves...they rushed stations into the spectrum space the government had allocated to the Amateur service, illegally! The government, having had a taste of the monitary payoffs that the broadcasters could provide, quickly decided to not enforce the laws..the Amateurs were astonished! But the simple fact is that money talks and everything else walks..always remember that broadcasting does not owe a debt of gratitude or anything else..the broadcast industry has paid for everything it's ever gotten, including the political favors necessary to grant a virtual license to steal!

You..you miserable excuse for a teacher, should be quite ashamed at not having given the student the whole and real truth! Influenced by you? I guess!

IMHO, the time has come for a serious look at ARRL divesting its publishing
business and getting back to being a membership organization.
The publishing arm of ARRL already behaves as a for-profit business
looking to optimize its own interests, rather than serve as an
arm of ARRL. There is a tendancy to publish what is profitable, rather
than what it most beneficial to amateur radio. I.e., a publication on
some specialized communication technique may sell only a small number
of copies, but they will mostly go to pioneers that will benefit ham
radio in the long run. On the other hand, "101 ways to use a 555 timer"
is mainly a money maker, and will have negligible impact on the hobby.

Contrast this situation to the IEEE, which actually loses serious money
on publications. But the publications pay enormous intangible dividends
to the profession as a whole. The IEEE doesn't try to compete with
McGraw Hill, Wiley, Sams, etc., and the electronic trade journals.
(Someone will no doubt point out the presence of "publish or perish"
papers by academics in IEEE transactions; yes, nothing is perfect).

This Spring I took a trip to Key West Florida. There is a US Naval Station right at the southern most tip of the Key. About a mile from the naval station is a state beach. Looking over at the station from the beach, one sees a earth station sized parabolic antenna mounted right at the water's edge. The interesting thing is the azimuth is about 180 and the elevation is about 0. I would be interested in a Ham's opinion of what they could be doing, besides just pointing in the general direction of Cuba.

Brian is correct, 'cept for the date (Aug 26-28, 1994).

Several of us spotted the large SCRRBA poster board in the main lobby
of the convention, so we went up to see what it was all about.

I'll echo Brian's comment: I was there. Why weren't you?

Well I hope it's easier for you than it was for me!

Ve> in any case, maybe there should also be iq tests given in conjunction
Ve> with the license tests...

Amen. I think the ARRL, W5YI, etc should stop selling the answers
to the exams. That would slam shut the the door on a lot of radio ignorance
and make us all a better bunch. We'd actually have to STUDY. God forbid we
should have to work for something instead of having it handed out on a silver
platter. That's why CW must stay in the hobby. It's the only thing left you
gotta work for. Heck, next they'll be selling those answers as well.

I will be going to Scotland and Great Britain in the next couple of months and would like to operate there on two meters with my handheld.

I've looked at the ARRL information server and found that I need to send an application to the Radio Communications Agency in the UK.

Does anyone know what the typical time is for processing a request?

Do cigarette lighter plugs that fit American cars work with cars in the UK?

Also any tips or info for operating in Scotland and the UK would be appreciated.

Thanks,
Marc

: Man I have to get me a 6 meter rig! Sounds like a lot of fun.
: How about some suggestions? I've been thinking about getting the alinco
: or Azden rig. Comments?

: Tom Randall - KB2SMS

The Alinco and Azden are both FM only. Six meters has so many different modes you may want to look around unless you are expecting just to be FM bound on somewhat few and far between 6m repeaters.

I asked the same questions a few months ago. I've been pretty pleased with my Kenwood TS60...except for the TVI. I'm in a place where we have a channel 2. 6m and channel 2 don't get along too well together. For now I'm running low power and still have some antenna issues to iron out (more height, more shielding, better grounding) before I'm really successful from the house. If worse comes to worst I'll go mobile!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 JUNE AND FORECAST FOR 20 JUNE - 22 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 18 Jun
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 Jun 21 Jun 22 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 Jun: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 18 Jun
Learmonth 17 2334 4432
Fredericksburg 21 16
Planetary 27 18

Observed Kp for 18 Jun: 1354 3222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
20 Jun 16 Unsettled to active
21 Jun 13 Unsettled
22 Jun 10 Unsettled
COMMENT: Slightly elevated geomagnetic activity expected over next
two days due to solar coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
19 Jun normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Jun normal fair poor
21 Jun normal normal fair
22 Jun normal normal fair
COMMENT: Conditions at high latitudes are expected to become
degraded 20-21 June.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
19 Jun 23 near predicted monthly values

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
20 Jun 20 Near predicted monthly values
21 Jun 15 Near predicted monthly values
22 Jun 20 Near predicted monthly values
COMMENT: Degraded HF comms may have been experienced during local
night. MUFs at Townsville and Hobart were near predicted monthly
values. Degraded HF comms may be experienced for southern regional
Australia during interval 20-21 June.

Hi Brad,

Check ftp://ftp.une.edu.au/pub/ham-radio/funet/ham/packet/terminal/ you find a copy there. If not ring our Pres. Phil Maley (VK6AD) 3544078 after hours as there may be a copy at Wireless Hill. Also you can ring our disposals officer (WIA) Roy (VK6XV) 2463642 with your details on the answering machine and it will go out on the Sunday broadcast. You may already know all this info.

I'll be headed down to Australia on business this summer. Does anyone
know about 2m activity, specifically around Sydney? Are there reciprocal
privileges? Do I need to do anything special? My license here says I'm
a tech (without HF) due to an FCC snafu (I have the CSCE darn it all!);
does that give me any privileges down under? Any info appreciated!

: In article <1995Jun13.162258.4133@clark.dgim.doc.ca>, jcumming@dgim.doc.ca (Jim Cummings) says:
: >Although I am loath to comment on the U.S. licensing and certification
: >structure, I believe that the objectives for the CW and technical testing
: >are significantly different. As they are significantly different, it
: >does not follow that to discontinue the testing of one means that the
: >other should also follow. The bottom line for the need of testing is
: >that it is mandated by the ITU Radio Regulations. Although the Japanese
: >have amateur classes that do not required Morse code testing, seemingly
: >to violate this regulation, the technical restrictions are such that, in
: >the opinion of the Japanese authorities, international interference is
: >mitigated, as permitted by the same Regulations.

: When were the ITU Radio Regulations passed by the House and Senate and then
: signed into law by the President?

As I recall my readings on the political infrastructure of the US government, the ITU Radio Regulations have treaty status and according to the US Constitution require the consent of the Senate, after whic, it has the status of law.

If I am incorrect, I would welcome correction on this point.

: We are a free and sovereign nation, not a vassal of the UN or any agency
: thereof. So is Japan; so is Canada. As far as I'm concerned, if Washington
: or Ottawa decides to drop the code test, Geneva can get stuffed.

The problem with unilateral abrogation of multilateral treaties is that it often has unforseen consequences.

For example, let us assume the Canada deleted the Morse code requirement. I am sure that there would be a hue and cry by the amateur population demanding that the FCC inform the Canadian authorities that Canadian amateurs must not operate their amateur stations in the US because they do not need to demonstrate a knowledge of Morse code at all!. As a result, US amateurs would also be barred from operation up here in Canada, because Canadian amateurs would be refused similar privileges. As a result, if a US licenced amateur operator were to come up to Canada with a two metre rig, and did not remove it prior to the arrival to Canada, that individual would be subject to 2 years in jail or a $10,000 fine upon summary conviction.

Could Canada and US unilaterally delete Morse code requirement? Sure - but it probably isn't worth the hassle, from an international perspective.

Bob Levine (levine@mc.com) wrote:

: It is silly to believe that cw is anything close to obsolete. Of all the
: modes of amateur radio (am,fm,ssb,cw,baudot,amtor,pactor,sstv,fstv, etc)
: no one can argue that cw QSOs are the second most frequently used, probably
: second only to fm and that is only because of the huge number of repeaters
: avalailable. I would bet a survey of many other countries in the world would
: show cw #1 in many places, probably in Russia.

: #2 out of at least 10 modes certainly doesn't sound obsolete to me.

That being the case, in the amateur context, then Morse code testing need
not be mandated for access to the HF frequencies. If it is so popular,
then the pro-CW-testing crowd have nothing to worry about.

: Also, no one can argue the fact that a cw is the most efficient
: use of bandwidth for a QSO.

That is no longer the case and is untrue. But if you are not using the
newer technolgies or trying to keep current in them, it is not surprising
that many believe this surviving radio myth (rm).

: Unfortunately it requires study and practice and is therefor more unappealing
: to the newcomers of the hobby.

But for what end? Testing for its own sake, or for that supposed lift of
feeling good is unjustifiable. If you want to feel good, make an
appointment with your doctor and get some Prozac.

: Big commercial interests and ham
: dealers want to get rid of code requirement because more people will
: get into the hobby and buy their stuff.

Where is your proof that the assertion is true? Otherwise, it is useless
speculation bordering on libel.

ARES SUPPORTS MOCK DISASTER IN LUMBY B.C.

The North Okanagan ARC bulletin recently reported on a successful community mock disaster held in April. The staged disaster recreated a gas truck hitting a logging truck, which slammed into a school bus full of children. This was a first for Lumby.

Community emergency response groups included the RCMP, the Provincial Emergency Program, the Lumby Community Services, the volunteer fire department, ambulance services and ARES.

The local health unit was used as a hospital and 10 badly injured children were transported from the accident location to the makeshift emergency treatment centre where they were met by an ESS team who provided many services including registration and inquiries, food services, and trauma support.

Emergency crews discovered a gas leak and the school bus had caught fire. J.W. Inglis Elementary School was evacuated to the community centre.

Seventeen ARES operators helped with message traffic between the disaster scene, the community centre and the hospital. The radio exercise involved an attempted HF link to Victoria which was not successful due to atmospheric conditions; however, they did manage the contact thanks to IPARN.

REPORT ON PARTNERS IN RESPONSE 95

Almost 2,000 people attended the London, Ontario ARES Partners in Response 95 that was held April 7 and 8. There were 41 organizations represented. In total there were 75 vehicles and/or displays.

The London ARC display provided information on Amateur Radio VHF, HF and packet. The ATV group provided a demonstration on Amateur television.

According to a report in the LARC bulletin, former Ontario Attorney General Marion Boyd paid tribute to the Amateur contribution to the London community and spent close to two hours touring the displays.

The objective of the display was to introduce the professional resources to the Amateur community while explaining some of the capabilities of Amateur radio to other agencies. The public was invited so that they could see the level of preparedness of the London region.

Media coverage was considerable including an article in the London Free Press. Local radio did a live 20 minute feature. The local TV station covered the event on Saturday and Cable TV provided public service announcements.

The show stealers were the two landings by the National Helicopters Bell 222 aircraft. Crew member Ian Macleod VE3IRM was instrumental in securing this display. The helicopter is based in London and works under contract to the Ministry of Health. It responds to life threatening incidents where ground-based transport would take too long.

The Niagara ARES display featured two trailers including the mobile command unit.

ARRL HACKED ON THE INTERNET
From Club de Radio VE2RM bulletin

The ARRL has been hacked on the Internet. The League says that a message claiming to be W1AW Official Bulletin falsely states that the American Radio Relay League plans to petition the Federal Communications Commission to drop all Morse code requirements for all Amateur radio licences in the US.

The League says that an authentic ARRL bulletin, numbered ARLX004 was apparently altered and re-posted on an internet newsgroup. From there it has quickly spread worldwide.

The League has no plans to file any form of no-code expansion petition. It says that the real ARLX0004 concerned a balloon launch from Iowa.

The ARRL adds that it views the dissemination of forged official bulletins as an extremely serious matter, but stopped short of saying what action it will take if the person who posted the phony message is found.

HAM RADIO CLUBS HAVE HOME PAGES ON THE INTERNET

VE2RM can be found on the Internet at http://www.cam.org/~dino/. This mini-BBS will feature club news items and files from VE2RM Inc. The node is maintained by Dino VE2DM.

According to an item in the club bulletin the system has just been installed and members are warned that there is work to be done. Users may leave E-Mail for other club members and the system operator. The system is undergoing a trial period. If you want more information contact Dino via E-Mail at dino@cam.org.

In Oakville, The Hamshack BBS (905 827-8053) now has Internet E-Mail capability and this facility is being offered free of charge to members of the Oakville ARC. For more information E-Mail: Tony.Osman@hamshack.gryn.org.

THIS RAC BULLETIN AVAILABLE ON E-MAIL

The RAC Bulletin accommodates fast breaking news from RAC, when and if there is fast breaking news. The bulletin also covers other short Amateur radio related items generally gleaned from the scores of club bulletins (always with credits), which are sent to RAC each month. Special thanks to the clubs across the country that send their bulletins along. We credit your bulletin items when we use them which helps plug your club and recognizes your efforts.

The Bulletin is circulated by packet where it is chopped into small slices more appropriate to the medium. A few short items are sent countrywide each week via packet. The full version of the Bulletin is also sent by E-Mail to subscribers who have asked for it. It is also posted to the Internet where it is circulated world-wide.

Copies of the Bulletin are printed and mailed to paid subscribers.

The RAC Bulletin is written, edited and circulated by volunteers and operates without a budget from RAC. Circulation revenues cover the small printing and mailing costs involved.

Cam Inglis VE3UXN does the writing, editing and the typesetting of the Bulletin. Debbie Norman, general manager of RAC checks Cam's work (she's a great proof reader). Steve Cutway VE3GRS looks after seeing that the text files find their way onto packet and the Internet. If you get the RAC Bulletin via E-Mail it is Steve that makes sure it gets to you. He goes back a few years on this job.

Normally, Bernard Burdsall VE3NB does the photocopying of the printed version and the envelope stuffing and mailing. Bernie spent a few years writing the Bulletin himself.

Reading as many club bulletins as we do each month we see where items from the RAC Bulletin are regularly used as fill in club bulletins, most often with credit to RAC which keeps the name in front of the troops. We greatly appreciate the exposure. RAC is important to Amateur radio and continued support from the Amateur community is vital to the hobby.

This is the final RAC Bulletin for this season. Look for us again in September. If you have items for the Bulletin please forward them to RAC. If you would be interested in volunteering to help with the Bulletin please let Debbie Norman know.

RAC COMMITTEES TO STUDY INTERNAL STRUCTURES

RAC President Farrell Hopwood VE7RD, announced the formation of two ad-hoc committees, sanctioned by the Board of Directors of RAC, to review and improve internal management structures.

The "Ad-Hoc Group on Committees" consists of Bill Gillis VE1WG (Chair), Tim Ellam VE6SH, Ken Pulfer VE3PU and Bob Bishop VE3JAB. Their objective is to study the framework, function, structure, duties and objectives of standing, advisory and ad-hoc committees for internal RAC management.

The "Ad-Hoc Committee on the Field Organization" will review areas of basic policy and structure with regard to this important operation. It will look at the purpose and function of the field organization in light of current and future needs of Radio Amateurs of Canada. It will also examine the role and responsibilities of Field Service and Section Managers. This committee consists of Dave Panting VE4EF (Chair), Ken Oelke VE6AFO, Ken Pulfer VE3PU, and Joan Lloyd VE5ML.

Both committees will report their findings and proposals to the Board of Directors at a September 23, 1995 meeting at Niagara Falls, Ontario.

IOTA CONTEST SCHEDULED FOR LAST WEEK OF JULY

The IOTA contest will take place over the last weekend of July. Organizers say there are lots of Canadian islands needed by island hunters.

Paul O'Kane EI5DI, has advised us that he has freeware logging software for the IOTA and other Radio Society of Great Britain (RSGB) contests available. If you are on the Internet, access it through Paul's home page at http://www.iol.ie/~okanep/, or by anonymous ftp from ftp.iol.ie. The files are sdi.exe and sd.exe in directory /users/okanep.

Paul says that his IOTA program, Super-Duper for IOTA (SDI), was used by the overall winners of both the 1993 and 1994 contests. He will be using it with the EJ1D team from Bere Island, Bantry Bay, Co. Cork in the 1995 event.

CQ INTRODUCES ONLINE ORDERING

CQ Communications, Inc., publishers of CQ magazine recently announced online ordering for its magazines, books, videos and other products. CQ will also offer products from the American Radio Relay League and the Radio Society of Great Britain online. This ordering system is available to anyone with access to Internet e-mail. It is designed to combine added convenience with a high level of security.

For security reasons you first sign up by requesting an application via e-mail. You then return your mailing address information and credit card details via fax or regular mail, not e-mail. You will be assigned a customer number which is the only information that travels via e-mail. CQ only ships

to the address on your application so there is no incentive for anyone to use someone else's customer number. You can order 24-hours a day and your order is processed at CQ headquarters in New York.

Signup applications may be requested via e-mail only to any of the following addresses: CQ@genie.geis.com, CQMagazine@aol.com, NW2L@aol.com, 72127.745@compuserve.com, or p00259@psilink.com.

PULFER SUBJECT OF RECENT COMPUTING CANADA ISSUE

Ken Pulfer VE3PU, is very active in Amateur radio and Radio Amateurs of Canada. He was recently highlighted in the commemorative issue of Computing Canada as one of the veterans.

Ken is 62 and retired from the National Research Council of Canada. He was vice-president of the NRC for ten years. He graduated from the University of Manitoba and spent most of his working career with the NRC.

His research at the government agency resulted in some interesting achievements including what Ken believes was the first mouse in Canada. He also experimented with graphical user interface long before it gained wide-spread acceptance. Virtual reality was also experimented with at the NRC many years ago.

In the article Ken says he "didn't appreciate, at the time, how much consumer demand was going to impact the way technology would go." He says "I thought that technology would drive the use of machines, the way machines are designed and the way they would be used."

Ken is currently serving on two committees recently organized to review and improve internal management structures at RAC, as well as holding the Executive position of Secretary-Treasurer.

ONTARIO SCIENCE CENTRE APPEALS FOR HELP

Alf Hepplestone VE3ALF, recently wrote the Oakville ARC to thank them for their volunteer support of the Ontario Science Centre Amateur radio station VE3OSC. The centre entertains more than one million visitors a year. The Amateur radio display is extremely popular and is currently, once again, being updated and modernized. The expectation is that equipment will change annually giving the public and the ham operators the opportunity to experience the latest in technology.

Alf manages the OSC station which is open 364 days each year between 11:00 and 15:00 hrs. Amateurs with all levels of experience and licence qualification are invited to help man the station. The OSC phone number is (416) 429-4100, extension 2323.

US COAST GUARD PULLS THE PLUG ON CW
Source AR Newsline

The US Coast Guard, after nearly a century of monitoring telegraph distress calls has turned off its Morse code equipment forever. At about 0015 UTC on April 1 the US Coast Guard station in Chesapeake, Virginia tapped out

the end of its final message and then turned off its gear.

In closing down, the CG has followed the lead of other services that have abandoned the use of Morse code for voice and digital modes.

The CG says that one of the primary reasons for curtailing code operations is because merchant ships and the military use has declined in recent years.

Managers for shore stations KFS in San Francisco and WLO in Mobile, Alabama apparently have expressed a different view. They say the decline of CW has stopped, at least for smaller ships that cannot afford to retrofit for satellite services. Both stations plan to continue offering CW service to those ships whose owners will not or cannot afford the additional expense of new computerized communications equipment.

BRING IN THE RUSSIANS

The Lakehead ARC has a fund raising campaign on the go which they hope will result in a friendly visit by Amateur radio operators from the Irkutsk Radio Club this summer. The Lakehead club hopes to house and feed the Russian visitors in their own homes where they will have the opportunity to savour Canadian lifestyles. Plans call for a number of ham related activities during the visit.

Pat VA3GD, writing in the Lakehead ARC bulletin says that "it will be a once in a lifetime opportunity for dialogue on culture and Amateur radio."

UPCOMING IN TCA
Rob Ludlow, VE3YE
Editor, The Canadian Amateur

The July/August summer issue of The Canadian Amateur features the second of two parts on the increasing challenges to erecting towers in urban environments. This second article, by RAC First Vice-President Tim Ellam, VE6SH, offers useful advice on how to avoid tower disputes and outlines duties and responsibilities of Amateurs, municipalities, neighbours and Industry Canada.

The July/August issue also includes a Reader Survey so that we can better serve your needs and interests, and voting on the Articles Contest.

There is coverage of the Hall of Fame Awards, special summer operations and special event stations, details of the IPARN expansion into Atlantic Canada, two pages of coming events listings, ads chock full of the latest ham gear, and an update on regulatory issues.

All this, plus letters, Silent Keys, regular columns, DX and contest reports, including a complete summer contest calendar, HF propagation forecasts, packet and VHF/UHF, Club News, YL News, QUA, ARES, Public Service, Section News, This Month in History, bench and homebrewing tips, antenna design, shortwave listening, and the Swap Shop - all in the July/August issue of The Canadian Amateur, coming to your mailbox this month.

NEXT RAC INTERNET BULLETIN

The print version of this bulletin is sent on the 15th of the month to RAC affiliated clubs, all Section Managers, Bulletin Managers, Official Bulletin Stations throughout each RAC Section and paid subscribers. The Internet version is sent as a single bulletin as close to the 15th as possible. The packet edition of the bulletin is transmitted more frequently in an attempt to keep each edition to no more than two parts. The next regular Internet bulletin should be transmitted on or about September 15, 1995. Have a great Summer!

5249. Tuning Dipole used with TenTec Argonaut 509 on 20M

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-19 00:00:00 UTC
From: dfjenki@ibm.net
Message-ID: <P5XvlaNLbXjK079yn@ibm.net>
Source record: 244061

I am using a TT Argo 509 with 80M dipole and MFJ tuner. Antenna is fed with ladder line. The rig tunes fine on 80 and 40M. That is, I can get the SWR down low using the LOCK control on the rig, and then when transmitting (either SSB or CW), the SWR stays low.

However, when I'm on 20M, I have the following problem: I put the rig's control in LOCK position, and as before can tune the SWR to 1.1:1 or so. Everything's cool on CW, but when I transmit SSB, the reflected power needle shows an extremely high value (and hence SWR is also high). I *can* tune to low SWR while pressing mic PTT switch, but then forward power goes no higher than .5W or so.

I have been given a suggestion that the RF ground should be checked. I have tied the rig and tuner grounds together and thence to a 8' copper rod about 14 ft from rig. The ground lead is a length of coax (about 20' with a few loops in it) with a capacitor across shield and center lead at both ends.

Questions:

1) What does the LOCK switch *really* do on the TenTec 509?

2) Do I have a real problem, or are the "symptoms" merely artifacts of the particular rig configuration?

3) What suggestions do you all have for debugging this situation, or is it hopeless given the rig configuration?

Sure appreciate some help - would like to use phone on bands other than 80 and 40.

In article kd4awq@iglou.com (Ed Ellers) writes:
>When were the ITU Radio Regulations passed by the House and Senate and then
>signed into law by the President?

Most recently I believe it was 1979. These are international treaties,
and require the consent of the Senate. Treaties hold a status secondary
only to the Constitution in US law. Once the Senate consents to a treaty,
it is superior to all other US laws, and as binding as the Constitution,
though not superior to it.

>We are a free and sovereign nation, not a vassal of the UN or any agency
>thereof. So is Japan; so is Canada. As far as I'm concerned, if Washington
>or Ottawa decides to drop the code test, Geneva can get stuffed.

The ITU is the oldest still active international body. It far pre-dates
the UN, or even the League of Nations. All ITU regulations are the result
of treaties negotiated among the member nations and approved by the
governments of each member. This is not the UN, it doesn't work by majority
vote. It requires a consensus agreement of all member nations. Individual
nations are free to take footnoted exceptions to any provision of an ITU
treaty. They do not have to accept all or nothing. This is how Japan has
a code test free HF license, they took a footnoted exception to the Morse
testing requirement of Article 32 of the ITU treaty during the time it
was being negotiated. Any other nation could have done the same. The US
did not choose to take such an exception, but there will be another
opportunity in 1997 when this issue is visited again by the ITU.

The ITU has played a vital role in international coordination of
spectrum usage. They do not deserve to be bashed. It's only through
the cooperation member nations of the ITU have shown down through
the years that there is any semblance of uniformity in bands and
spectrum usage throughout the world. The small permanent staff does
not make policy. Mainly they keep track of member nation's activities
so that the world has a coordination database. They are the good guys.

I agree with Richard. There's no need to make the licensing system
baroque or overly complicated. All we need is two classes of license.
The current Tech will suffice as the entry level, with a bit of beefing
up of the electrical safety, RFI suppression, and regulatory questions.
The full license would consist of all the written elements through the
current Extra, plus more detailed questions on electrical safety, spectral
characteristics of various modulations, RFI and EMI issues, and a more
comprehensive understanding of elementary communications and information
theory.

I'd cut the maximum power limit of the Tech class to 100 watts, but
open portions of all our bands to their use. The full license, we
could still call it General, would have full privileges on all amateur
frequencies and an absolute power limit of up to 1.5 kW (except in the
National Quiet Zones around our radiotelescopes and such). I'd also
remove mandatory mode restrictions on all of our bands and substitute

ERP/Hz spectral density limits instead (something on the order of 0.5 watts ERP/Hz would seem about right for general usage, but we could authorize up to 8 watts ERP/Hz in certain limited band segments for specialized needs). We would still be free to set voluntary bandplans as needed of course.

>one get around _that_?

That's easy, and one of the most elementary things everyone needs to do. Shack power should enter through the ground window, just like every other cable entering or leaving the shack. Its safety ground wire, and neutral, should be attached to the single point there, and the hot lead(s) should be suppressed with adequate suppressors. The power can then be routed through a master disconnect switch to individual GFI receptacles mounted on the equipment bench where all equipment is then plugged in.

Before anyone screams, I know what the NEC says about the neutral only being grounded at the service entrance panel. This is one of those exceptions I've mentioned before that the NEC will allow under certain conditions. You *must* use GFI receptacles if you're going to do this, and all wiring on the shack side of the ground window (up to the receptacles) must be armored (flexible BX is good).

Alternatively, if your local inspector balks, you can use a transformer at the ground window, and only ground the safety grounds at the ground window. A big fat Sola constant voltage transformer would be nice, but can be a bit pricey for a high powered station (a 5 kVA unit goes for about $400 surplus). The trick of using back to back heavy filament transformers can be used too. Likely your power company is like mine and has a yard full of perfectly servicable transformers that they'll give you if you'll sign the EPA waiver. (I'd just as soon not get into that, however, because now you're responsible for ultimately disposing of the PCBs in an approved toxic waste treatment facility, unless you can find someone else to palm the

transformer off on when you no longer need it.)

June 10, 1995
****
I official packet bulletin of the United States
S Islands Awards Program and the US Islands ARC D
L c/o John Reisenauer, NL7TB
X

****
Rt. 2 Box 2161, Benton City, WA 99320 USA

The United States Islands Awards Program is expanding its role in island management due to the ever increasing popularity of state island collecting. I am pleased to report that US I has formed a new charter club in Alaska, "US I Last Frontier ARC" (call pending), to compliment our lower 48 based "US Islands ARC" (KC7KHU). These are exciting times in the North Country and US I will be there! Details are presently being worked out for our Douglas Island outpost (US I #AK-18S).

Sigma, WB4SRH, wasn't on June 5th because of rig problems but promises to be on soon. Island stations on for Field Day include W4OT from Wabasso Island, Florida (FL-38R) and N4XEO on North Hutchinson Island, Florida (FL-37S).

Be on the lookout for the following NEW ISLANDS that will be on soon:
1. N6IV, KF6XC and NL7TB as "VY1ISL" from an undetermined Yukon island starting around 2000Z June 30th for the Canadian Islands Awards program (try 14.250, 7.250 or 3.950 +-).

2. Same team will activate Alaska's Ushagat Island (Barren Islands group- new IOTA!) starting around 0200Z July 4th for 3 days (same freqs). This is the first major DXpedition for US I!

...new DXpeditions
NL7TB and I will activate Governor's Island from Lake Sakakawea in ND on July 24 and 25. Nearby John's Island may also be a go depending on the level of the lake! We'll use the club call there.

Our 1st Annual W/VE Island Contest promises to be a big success as we've received a lot of favorable comments so far. Reserve September 23 and 24 for your ISLAND FUN!!! The US Island Directory, our complete information package including rules, awards available and our current islands activated list, is available for $5.00 US/Canada or $7.00 elsewhere. Have a fun and safe summer. 73 and 88.

Claire, WL7MY
Secretary, US Islands ARC

Hi David... I wonder if there would be a problem with one of the new
900 MHz digital cordless phones? I guess it all depends on how much 6
meter work you want to do and how good of neighbor relations you want to
keep. If it was important enough to you, maybe you could talk your neighbor
into a 50/50 deal or something on a new phone... Just thinking out loud. ;-)

I agree with your comments about choosing your first rig. I would like
to add that the new Yaesu FT-51R dual-band HT has much improved
intermod specs than the FT-470/530 models. In addition, it is the
first HT that can be programmed with a new special windows ADMS-1
Yaesu software. (See July QST Magazine) Programming is fun again !!

: My wife and I are hams and have need to keep in
: communications while I am on the coast. The
: distance from Portland is roughly 50 miles and
: we have found that the 2-meter repeaters don't...

(stuff deleted)

I recently returned from Baja, Mexico, where a group of hams provided H&W communications for racers in the Baja 500 off-road race. We used NVIS antennas and handled the entire event on 75 meters. This included daytime as well as night and we enjoyed good solid communications.

The NVIS antennas we used were horizontal or vee antennas strung close to the ground so that they afforded a high angle of radiation. This is a good technique for point to point communications, but might not work well with your traditional HF mobile antenna.

No matter what mode or band you use, don't depend on ham radio for privacy. The whole world is listening!

John, posting this on rec.radio.amateur.digital.misc
would have brought you more responses, but here it is.

To quit the KISS mode return to the command mode
and then use "KISS OFF", now to cancel host mode
use 3 ^C (control-c), or the sequence ^A ohon ^W
and then send the command kiss off.
The August 91 rom version manual says that the
3 ^C's will also force kiss off at the same time
as turning the host mode off.

73 de Shawn, N7XBM.

Common sense tells me that removing CW and not replacing it with
some other form of testing to maintain the same level of competence
would result in an influx of ignorant and/or incompetent operators on
HF ( why is there ANY testing at all ?).

*******************************************************************************

> individual's competence, nor is "harder" examination called for.

See my answer to the last comment.
You just don't get it, do you !? Babble, Babble...here we go again...
Lessening the testing requirement by eliminating CW and not replacing it
with some other form of testing (which you seem to believe would have no
detrimental effects) IMHO would make it easier for incompetent operators
to get on HF.

*******************************************************************************
>
HD> : 3. Your silly analogies of Doctors and rags or cars and buggy whips are
> : totally out of context. Contrary to the "CW is outdated and old

>
JC> My analogies are silly only because you are unable to effectively counter
> them.

Huh ? I don't need to counter an analogy that has no relevence to the
subject matter. The above text explains why they don't compare.

****
>
JC> In any event, since amateur radio is (or soon will be) the remaining

> code as a means of communications, more power to them; it is too bad that
> they avoid to use more efficient means.

How do you render CW obsolete when it is still widely used on HF (and all
of the other modes that I mentioned earlier...ya...even in the 90's) ???

What might these modes be that can be demonstrated to be as effectively
reliable in adverse conditions ? RTTY ? Baudot ? Packet ? ...NOT !!
I challenge you to receive any digital mode in poor conditions. No
machine can currently replace the human ear and mind to decode and fill
in the blanks. Even in extreme signal-to-noise ratio conditions, the
threshold of a machine would have to be set so sensitive that it would
be trying to decode blips of noise where a human could still distinguish
the tones.
By the way, just for interest sake, I'm somewhat of a "Digital-Boy"
...I enjoy computing, discrete logic and microcontroller design and
programming ect... I'm not necessarily "holding onto an era" of "living
in the past" by stressing that CW still has it's place.

****

JC> However, that amateur communicate in the Morse code does not justify

> answer, I am sure you will agree, is that there are none.
>

I just wanted to express the usefulness of CW in modes of operation
where it is virtually imperative and that it's not outdated and useless.
Keep in mind the popularity of HF CW in the worldwide amateur community
even in the 90's.
The primary purpose for CW testing is to act as a competence test.
Like I keep saying...if and when it can be replaced with something that
maintains the same (or perhaps better) competence of operators...I'm all
for it !
****

> license 13 years (I believe) after Canada had done so?

Hmm...is that it...are you one of the Digital class licencees ...naw...
didn't you say that you presently hold the Advanced class of licence ?
At any rate, we both know this was a different animal than what we currently
know as no-code class of licence. (Do you think a BASIC licence holder
could have passed the Digital test...for the mostpart, I doubt it.)
The Digital class was intended for EXPERIMENTERS wishing to use radio as a
medium of data transmission, not as a primer-to-get-your-feet-wet as is the
current no-code licence. And of course, the Digital folks were not allowed
HF privs without knowing CW. Do you wonder why ?

****

HD> : C'mon Jim...you choose not to believe that they had a part in padding
> : the hands of the lobbiests when no-code licencing was being
> : discussed ?
>

JC> I choose not to believe it because I know it is true from personal
> experience.

Oh...you are an MP or some sort of Government ISC official that was
involved in the changes to our (somewhat) new Amateur licencing scheme ?
In any case, much of this activity takes place behind closed doors and
of course you would not believe it.

****

>
HD> : What cave are you living in ?

> support your arguments and are shown for what you are.
>
My appologies Jim. It was meant as satirical humour relating to the
text, not an insult. In any case, I'm not stooping. I have expressed
rational reasons for keeping CW while you have shown none for scrapping
it (except for "it's old fashioned and outdated"). Why..Why...Why ????

****

HD> : Do you think no-code
> : licencing was all the doing of the FCC and ISC without pressure from
> : outside groups ?
>
JC> Yes - if you read the RIAS of the restructuring of the amateur service

JC> That's another discussion, but the fact that we are not bringing in
> "techies" is a marvellous aspect to the hobby and is breathing in fresh
> ideas.

Huh ? What might these fresh ideas be ???
Less "techies" entering the hobby "is a marvlellous aspect.." ???
That's a funny outlook on the hobby Jim.
I'm beginning to wonder what it is about the hobby the got you into it
and keep you interested ???

****
>
> : My 'other problem' is that I had to EARN the HF privledge and feel that

> : what is being asked in testing (including CW) is not too much to ask for

> : so should you".
>
> Yes it is if you cannot demonstrably prove that CW operation is vital.
> As you have side in your previous posting, and pointed out in this, it is
> not so.
>
NO...NO... Why does CW have to be "vital" to the hobby ? It is
certainly a related and useful skill and not "outdated and useless" like
many of you folks would like everyone else to believe.
But like I said in the last line, I don't want to ram CW down anyone's
throat, I just beleive that it still serves its purpose in the test.

****
>
HD> : I simply believe that that same stringent requirements
> : placed on me should be continued whether or not CW is part of it.
>
JC> Again, talk is cheap. What do you mean? What does stringent mean to you?
>
>

Is the glass half full or half empty ? Is it sunny with cloud or cloudy
with sun outside ? What came first, the chicken or the egg ?
Uhh... Everything is relative to some sort of standard. The level of
HF testing that has been with us for eons is what I say should be
maintained. CW or no CW ! Many folks find the technical testing as well
as the learning of CW "stringent" (but obviously possible).

****

>
HD> : I suppose
> : that a replacement for CW cannot be formulated at this time and since CW
> : is still used in Amateur Radio, it continues to serve its function as a
> : competence level filter.
>
JC> And a poor one at that. For example, in the US, I understand that all
> the Notice of Apparent Liability Notices, which is a series of
> administrative fines, are issued again coded amateurs. I have yet to
> read of an instances where a no-code amateur has been so cited. So it is
> not the lid filter that it thought it was supposed to be.
>

It's the nature of the beast that the said citations were issued against
HF (coded) operators. This is where malicious operation can result in
interfered communication halfway around the world and further proof
to substantiate my stand on maintaining a high level of competence of HF
operators. Officials have to act promptly on this kind of activity.
Not to say that local interference from BASIC licencees on VHF and up
is acceptable. JFYI, I recently read in the front of QST about an amateur

in the U.S. who was caught interfering with airport communications on
VHF... a pretty serious FEDERAL offence.
Notwithstanding, there are still bad apples on HF but the likelyhood of
such events could increase if a certain level of competence in the
testing for HF privs is lowered. Do you not agree ?

****

HD> : Again, I refuse to believe that any advocate to ANTI-CW testing for HF
> : has absoultely nothing to gain, notwithstanding the folks who want it
> : without having to EARN it.
>
JC> Insisting that you learn something which is not obligatory has nothing to
> say for it either. I agree that the privileges have to be earned,
> whatever that means, but it has to be relavent to the activity the is
> subsequently permitted.

Well despite its demise in the commercial and military world, CW is still
relative and still used and not outdated in Amateur Radio. Whatever might be
MORE related to HF operation that upholds the required level of
competence is welcomed on my part.
All I keep hearing from you folk is that "CW should be scrapped but I
don't know what should replace so maybe nothing should replace it..."
It is to this that I say...bad move.

****
>
HD> : For those of you who insist...let's hear the
> : suggestions of what should replace CW to maintain the current level of
> : standards for operator comptetence.(Spare me the "...competence??? Have
> : you listened to 20 meters lately ?... garb. There will always be bad
> : apples in the bunch.)
>

JC> What are your proposals then?

Of course you couldn't answer this Jim.
My proposal is to keep CW ! It is still used and it serves it's purpose
on the test. ANYONE can learn it...young or old.

****
>
JC> 73 and live better digitally
> Jim, VE3XJ
>

Yes, live better digitally...with CW...the one that started it all ! :)

This was meant as a general statement...I suppose there are others with
their own reasons for wishing the demise of CW testing for HF privs.
What is your reason ?

I have provided rational reasons why I think it should stay while I have
receive none such for reasons to abolish it.

Regards...Hugh VA3TO

5273. Out-of-band and the OWLS get will get u

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-19 00:00:00 UTC
From: billhar@spaceworks.com
Message-ID: <DAELrA.2CJ@spaceworks.com>
Source record: 244245

Subject: O.W.L.S

"You are .035 wavelengths out of the band OM."

"The QRM is pretty heavy here Joe, lets QSY to 21.363 and I'll call you". You spin the tuning knob of your state-of-the art transceiver with its digital readout until it indicates 21.363 and there is the other station right on frequency, giving you a call. We have become accustom to this kind of accuracy from today's equipment, but in the early days of amateur radio such was not the case. In 1926, most receivers did not have the frequency or bands marked on the dial, but instead the dials would be marked with a 0-100 logging scale. As to what frequency the receiver was tuned to was often an educated guess. To help amateurs calibrate their receivers and avoid out-of-band operation, the ARRL instigated the O.W.L.S. (Official WaveLength Station) program. Below is an update on the program from QST.

QST for September, 1926

O.W.L.S.
The list which appears on page 33 of July still stands with the exception of the following corrections.
Official Wavelength Stations added:
Canadian 2BE
Crystal-control OWLS added:
2DS
9AUG
6AOI
2BRB
Cancelled:
9ECC

Those not familiar with the uses of the OWLS are reminded that these are the A.R.R.L. guideposts. They announce their wavelengths frequently while engaged in ordinary amateur communications and their accuracy is kept up so that they can be relied upon for rough calibrations of receiving sets and wavemeters. Some OWLS announce in wavelengths, others in KCs. Their operation is governed by a committee of which the chairman is D. C. Wallace of 9ZT-9XAX.
******

D. C. Wallace, 9ZT-9XAX, mentioned in the article is the same Don Wallace, W6AM, who was a long time and well known west coast DXer.

Hi Steve, I find this extremely interesting, BUT... (see below)

ST> The following is a QST

ST> Apple Computer proposes a new data radio service for everyone.
ST> Find out more about the N 2 proposal on Newsline report number 931
ST> coming your way right now:

ST>(*****
ST> APPLE PETITIONS TO CREATE WIRELESS 'N2 BAND'

ST> Apple Computer has filed a Petition for Rulemaking with the
ST> Federal Communications Commission, asking for a spectrum to permit
ST> high speed data communications for schools, libraries, community
ST> groups, individuals, businesses and institutions. The proposed
ST> radio service is called N 2 and would be available to anyone
ST> without licensing or air time charges. Kind of like amateur
ST> packet radio but without the need to be a ham.
ST> In addition to permitting faster data rates, the N 2 Band
ST> would allow users, for the first time, to set up their own
ST> wideband wireless data links spanning five miles or more.
ST> Rural and other dispersed communities and suburban interest
ST> groups would be able to use the N 2 Band to develop local
ST> networks as well as for N 2 participation. Apple says that
ST> its N 2 proposal would complement, not replace, other licensed
ST> and unlicensed network technologies.
ST> One part of the N 2 Band comprises radio frequencies from
ST> 5150 to 5300 MHz. These are already earmarked in Europe for
ST> local area wireless networks. The second portion, from 5725 to

Your messge truncated at that point due to the fact that you used
no less than _120_ lines of disclaimers, closed circuit advisories
and credits! Any chance you can post the rest of it without that
so I can read it? Thanks! (It's not your fault really, our BBS
software just isn't very smart I guess!)

Silent key

Silent key

It is with deep regret that we report the passing of Keith Dodd
VK2RE.

Keith died suddenly at the home at Tumut on Thursday 15th of June.
Keith was a foundation member of Tumut A.R.C. and has been the
Repeater Officer of the club for 8 years.

Deepest sympathy is extended to his wife Jean, and his family.

This information was submitted by Vince VK2ALZ Secretary TUMUT ARC

Broadcast Roster

BROADCAST ROSTER

The broadcast roster for July to September will be drawn up this
week.

Will all broadcast team members please contact the Roster
Coordinator, Steve VK2QZ, with any dates they are NOT available.

WIA examinations

EXAMINATIONS

The next examinations
conducted by NSW Division of the WIA
will be held at Amateur Radio House Parramatta
109 Wigram St.
on
Sunday 2nd July 1995
at
1.00 p.m.
or earlier if everyone gets there early

Applications close
Thursday 22nd June

NTAC request

NTAC Report

Recently I have had a few calls from various Repeater Coordinators
inquiring about the status of their applications. As we have

currently NO OUTSTANDING applications on the books, and THESE PARTICULAR ones were VERY clear in my memory, I made some inquiries with the department. It seems they have a few problems with a new computer system and also a backlog as a result of delays caused by its implementationsas well as a rash of New Frequency applications from various bodies "trying to beat the price rises!"

Now ... we want to go to bat for you, however as we CANNOT track applications THROUGH THE DEAPRTMENT, we NEED to have our facts right. I am asking ALL clubs that have had ANY applications before NTAC in the last couple of years to WRITE TO US IMMEDIATELY and let us know whether your application has been successful. We need this information.

My address is
Ian Rosser
NTAC NSW

Parramatta 2124

VK2 WICEN news

VK2 WICEN news

The Hunter region are running a training camp on the weekend of 7-8th October at Crangen Bay, Lake Macquarie; all regions are invited, and further details can be obtained from Pauline VK2GTB on (049) 49-8786, or Frank VK2XVJ at VK2KLW.

The Hunter meeting is tomorrow; and there are at least three events next Sunday -- the Waratah 100 Horse Enduro run by Andy VK2XRX, the Lake Macquarie Half Marathon run by Steve VK2KBL, and the Elouera Half- and Mini-Marathons run by David Shaw VK2TIP, who is also running the City to Surf race later on in the year. David needs a lot more people for these marathons, and he can be contacted at home on (02) 588-5061 or at work on (02) 588-5100.

Those members who have not yet renewed must do so by 30th June, if they wish to remain a member. For just $10 (plus a joining fee) you can be a member of the only Amateur Radio organisation accredited by the State Government to take part in a disaster situation.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to VK2AAB, VK2OP, or VK2GJB; however, be aware that packet radio messages can be delayed by several days.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123,

St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

NEWS BRIEFS

Hewlett-Packard has developed a palm-sized wireless computer system for emergency medical use. The system would typically allow emergency medical information to be forwarded to doctor who is en route to the hospital to perform the required surgery.

The system comprises a desktop PC which obtains data from medical monitoring equipment at the hospital, interface to a pager service, and a number of HP 200LX "palm-top" personal computers fitted with pager receivers and custom software. This allows the doctor to determine the patient's medical status before they get to the hospital.

Readers with Internet access, and an interest in heavenly bodies might like to know that you can now get daily weather reports from Mars, via the net.

Climate modelling expert Dr Howie Houben of NASA's Ames Research Centre prepares the reports which can be accessed on the World Wide Web. The report features four small panels, which feature "a `bird's eye view of the Sun, Earth, and Mars', the size of Mars in relation to Earth, the day's close up view, and temperature and winds on the planet surface.

The Internet address is:

http://eggfoo.arc.nasa.gov/HTML/MARS/CD/MarsToday/AboutMarsToday.html

News Briefs gathers communications and technology news from Australian media and other sources worldwide. Thanks this week go to The Sydney Morning Herald and the Australian.

AMATEUR ON-LINE MAGAZINE NOW ON INTERNET

A new Amateur Radio Operator-On-Line Magazine is up and running and available on the World Wide Web at the following URL:

http://www.amateurradio.com

This is a little different from other Web pages. It is a complete magazine on-line with links between articles and pages. Since this is the first magazine of this type for Amateur Radio, the creators are interested in receiving feedback from readers. The creators of the Web pages are also looking for future articles to include in the on-line magazine. Comments should be directed to: evegraph@aol.com.

MAYDAY TRAFFIC PASSED ON AMSAT-OSCAR 16

[Another one for the "Amateur Radio Serving the Community" file:]

Troy ZL1UOP, recently passed a MAYDAY message received from Salomon Atoll, Chagos Archipelago, in the Indian Ocean. The message, dated 31-May-95 at 17:37 UTC, read as follows:

"Vessel G, a small fishing vessel called mayday. Drifting close to south Salomon Atoll. Vessel G has three persons on board and has lost its Mother Ship TALBOE 3. The Talbo 3 is Mauritius registered. Communication with Vessel G have ceased and a hand held flare has been seen.

"Contact With Deago Garcia is required. Please contact a Rescue center and pass this information on. Deago Garcia can contact us on 2182 KHz."

Mark Shepherd, ZL1TRE of Auckland, New Zealand, picked up the message and quickly pass it on to Search & Rescue in Wellington. Graeme VK2ZIS, of Port Macquarie, Australia also picked up the message and passed it along to the Australian Maritime Rescue Coordination Centre. Terry, ZL2AHK, in New Zealand passed message to the Honolulu Rescue Center. In a follow-up message, Troy said, "Many thanks for helping. We have managed to contact Deago Garcia (14 hours late). The Fishermen were rescued by the Mother ship early this morning. Today 4 boats came from the mother ship and thanked us for our Help."

--Graeme VK2ZIS, via the Space News bulletin from AO-16

CONNECTICUT AMATEUR RADIO WEEK

Connecticut Governor John G. Rowland has designated June 19 to 25, 1995, as Amateur Radio Awareness Week in the state. This week includes the weekend of ARRL Field Day and is an ideal time for amateurs in other states as well to obtain such public recognition.

Rowland, in his statement, cited the 9200 licensed hams in the state, as well as Amateur Radio operators' donation of their ser-

vices ''free to municipalities and civic organizations.''

Rowland also noted the upcoming Special Olympics, to be held in New Haven, Connecticut, next month, saying that the organizers have ''requested the radio amateurs of Connecticut to provide operational and backup communications for this important event; and .... will also provide international and domestic communications for the athletes to their families in their home countries and cities, and will perform these services on a volunteer, no-charge basis.''

Finally, Rowland cited the 50 Amateur Radio clubs in the state, the upcoming ARRL Field Day, and Newington, home of the ARRL.

A sample proclamation is included in Field Day packages from ARRL Headquarters or may be requested separately from HQ.

IPS Report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(09 JUNE - 15 JUNE)

ISSUED ON 16 JUNE 1995

SUMMARY
Date 09 10 11 12 13 14 15
10cm 86 84 83 81 77 76 73
A 6 10 6 2 1 4 (5)
T 31 39 41 32 28 36 30

SOLAR ACTIVITY WAS VERY LOW THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET TO UNSETTLED 14TH JUNE AND QUIET FOR THE REMAINDER OF THE PERIOD.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE 10 PER CENT ABOVE PREDICTED MONTHLY VALUES ON 9TH AND 12TH, 20 PER CENT ABOVE ON 10TH TO 11TH. fREQUENCIES WERE SLIGHTLY ENHANCED ON 13TH, THEN NEAR PREDICTED VALUES DURING LOCAL DAY ON 14TH AND 15TH AND ENHANCED 30 TO 40 PER CENT ABOVE DURING LOCAL NIGHT ON 14TH, AND 15 TO 30 PER CENT ABOVE DURING LOCAL NIGHT ON 15TH.

FORECAST (16 JUNE - 22 JUNE)

SOLAR: VERY LOW

GEOMAGNETIC: ACTIVE CONDITIONS POSSIBLE ON 20TH, OTHERWISE QUIET.

IONOSPHERIC: NEAR PREDICTED MONTHLY LEVELS, WITH CHANCE OF DEGRADED CONDITIONS ON 21 JUNE.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA AMARTS BROADCAST OFFICER

Club news: Griffith & MIA

Griffith and MIA area planning an Internet Gateway

Griffith and Murrumbidgee Irrigation Area amateurs are planning an Internet Gateway for pcket radio in that area.

The Interim Coordinator is Gary Hodder, VK2KCF. Gary is also the Internet Amateur radio TCP/IP Domain address Coordinator for that area and amateurs interesting in experimenting with an Internet to Packet Radio link should contact Gary. Gary will be able to issue you a correct address for a very wide surrounding rural area for the TCP/IP Internet to amateur system. If the project is successful, it is expected that most, if not all, packet traffic will be forwarded into and out of that part of the state via the system. Gary is inviting participants in planning and assembly of the system.

Presently, they have no active Packet radio BBS in the Griffith, Leeton and MIA area and, as a result, the amateurs are not able to keep up to date with the immense information resources that packet links can provide. Gary is planning, in the interim, to set up an FBB or JNOS Packet Radio BBS, which will obtain forwarding off H.F. Due to the distances involved out there, they have no digipeaters which reliably link them to other parts of the state although there is a local Griffith township digipeater. The VK2XLG BBS is now believed to be non operative.

Phone Gary VK2KCF, on 069 624 831
or P.O. Box 2379
Griffith, N.S.W.

Club news: Westlakes

Westlakes Amateur Radio Club
presents
a

MORSE CODE SPECTACULAR

This could be the largest assembly of Morse Code gear in one place. A day for the old "fogies" and all "knights of the keys" and even those who have no idea what it is all about.

Highlights include:-

* Operating vintage spark transmitters.
* All manners of keys, paddles, bugs and jiggers.
* Competitions, prizes and raffles.
* Free telegrams sent over a special line on
old post office gear.
* Auction of surplus club equipment.
* Private buyers, sellers, trash and treasure sales.

* Westlakes famous steak or patty sandwiches
and hot dogs.
* Free tea and coffee all day.

Bring your own keys and keyers and add them to the display, you could win the lucky owners' prize.

Westlakes Morse Code Spectacular
York Street Teralba
Saturday 24 June 1995 11am

Club news: Waverley

Waverley Amateur Radio Society

The next meeting of the Society will be on Wednesday June 21st at 7:30 pm at the club house in Vickery Avenue, Rose Bay, next door to the RSL. Doors open at 7:00 pm.

The main item on the agenda will be a talk by Timothy Lester on building your own astronomical reflecting telescope. He will bring along his 10 inch unit to demonstrate how the extremely accurate mirror is produced.

The Society is to run its first Car Boot sale next Sunday, June 25th. Opening time for sellers to set up will be 11:00 am with actual sales starting at 12:00. The cost for sellers will be $5 where sales are made from a car boot or trailer, but if an indoor table is required the cost will be $10. There will be a sausage sizzle running and drinks will be available. Plenty of car parking is available.

In addition remember that the first Friday of each month is Project Night when you can bring along your technical problems to discuss with other members.

Don't forget that all functions will be held at the Society's premises in Vickery Avenue, Rose Bay.

Simon Buxton - VK2EIII - Publicity Officer

Club news: Liverpool

The Liverpool & Districts Amateur Radio Club will be holding an auction on Saturday 8th July.

Sellers will be allowed in at 9.30 am, buyers will be allowed in to browse at 11.30 am. Auction will commence at 12 noon and coffee, tea and hot food will be available as well.

The auction will be held at the Scout camp Cambridge Avenue Glenfield on Saturday 8th July.

See you and your radio gear there.

from Brad VK2QQ

Club news: Parramatta

Parramatta Amateur Radio Club

The following is an edited notice of meeting of the Parramatta Amateur Radio Club.

On Thursday 6th July at our club meeting the guest speaker will be Roger Harrison VK2ZRH ...

TOPIC ... "Amateur Radio ... Where it's at (?) ... and what the future holds" (?)

Usual venue Amateur Radio House 109 Wigram St Parramatta Time 7.30 pm.

Michael Corbin VK2YC Broadcast Officer
on behalf of the Parramatta Amateur Radio Club

DARC CORONA 10M DIGITAL CONTEST JULY 2 1995

SPONSORED BY DEUTSCHER AMATEUR-RADIO-CLUB E.V. (DARC)

NOTE: THIS CONTEST OCCURS 4 TIMES A YEAR ON THE FIRST SUNDAY
OF MARCH, JULY, SEPTEMBER, AND NOVEMBER.

CONTEST PERIOD: SUNDAY, FROM 1100Z TO 1700Z (6 HOURS).
MODES: RTTY, AMTOR, PACTOR AND CLOVER.
BANDS: 10M ONLY.
CLASSES: 1 - SINGLE OP. 2 - SWL.
CONTEST CALL: CQ CORONA TEST.
EXCHANGE: RST PLUS QSO NUMBER, STARTING WITH 001.
CONTACTS: ADDITIONAL QSOS ARE ALLOWED WITH THE SAME STATION ON
DIFFERENT MODE.
MULTIPLIERS: EACH DXCC/WAE COUNTRY, AND EACH CALL DISTRICT IN
JA, VE AND W.
QSO POINTS: COUNT 1 POINT FOR EACH COMPLETED QSO.
FINAL SCORE: TOTAL QSOS X TOTAL MULTIPLIERS.
AWARDS: TO TOP STATIONS IN EACH CLASS, COUNTRY, AND DISTRICT
MENTIONED ABOVE.
LOGS: USE SEPARATE LOGSHEETS FOR EACH MODE. LOGSHEETS MUST
CONTAIN: DATE, MODE, TIME UTC, CALLSIGN, MESSAGE
SENT/RECEIVED, FIRST-TIME MULTIPLER PREFIX, AND QSO POINTS.
ALSO REQUIRED IS A SUMMARY SHEET WITH A LIST OF CLAIMED
MULTIPLIERS. COMMENTS ARE VERY MUCH APPRECIATED.
DEADLINES: ALL LOGS MUST BE POSTMARKED WITHIN 4 WEEKS OF THE
CONTEST. MAIL TO:

APOLOGIES, BUT WE WERE UNABLE TO OBTAIN THE VK2SG RTTY DXNOTES THIS WEEK SO HAVE SUBSTITUTED THE FOLLOWING NOTES, IN PART.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 210
BID: $OPDX.210
June 12, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, Japan DX News, N4VZ, N4AA & QRZ DX, K4CEF & Southeastern Cluster Group, KK6EK, KD8JN, DF4RD, DK8KW, F5JYD, G4BUE & DXNS, HP2CWB, ON1LVL, ON6QR, ON7SJ, PA3BIZ, PE1KNL, SP6TPM and DL9GOA & DXNL for the following DX information.

9H, MALTA. A large group of Dutch amateurs (from the Dutch Radio Amateur Society) will be active for their 8th DXpedition to 9H-land. Activity will be from June 22nd to July 4th, from the QTH of Sliema on the main island on the complete 5th floor and roof of "The Regent Hotel". For the 3rd time the group will be active on the satellites (mainly AO-13 and AO-10,

MODE-B). The group plans to be active also on 160-2 meters (including the WARC bands). They will be monitoring 50.110, 50.120 and 144.300 for sporadic E openings. The list of operators is as follows with ther prospective callsigns: Fritz/PA0BEA/9H3IE, Frans/PA3CGX/9H3ID, Wim(Bill)/PA3BIZ/9H3ON Frank/PE1KNL/9H3QH, Teun/PA0TPM/9H3TD, Anton/PA3CRA, Erik/PA3DES and Jo/PE1NWI. All QSLs via homecall or the QSL Bureau.

CONWAY REEF QSLS. A note from Mats, SM7PKK, says that the Conway Reef cards (3D2CT and 3D2CU) are currently being printed, and he will have some with him at the Ham-Radio Meeting in Germany on June 23rd. He will arrive home in Sweden on June 26th and immediately begin shipping out cards.

D2, ANGOLA. Valy, D2/YO3YX is a Romanian Army Officer with the United Nation Medical Corp in the Romanian Army Medical Unit. He will be in Luanda until the end of the year. He has been heard on 18150 kHz around 1508z and 21267 kHz around 1523z. QSL via YO3YU, PO Box 55-36, Bucharest, Romania.

EA8, GRAN CANARIA ISLAND. Jean-Pierre is active daily as EA8/ON6GP on 30 meters. Check around 0230, 0900 and 2230z. He will be there until June 23rd.

EX (ex-UM8), KYRGYZSTAN. Yuri, EX0A, reports that a station is very active as EX/V31YM. The operator (Yu) is active on 20-10 meters, CW, SSB, the WARC bands and via satellite (21/28 Mhz). Please QSL directly to: Wilhelm Schommer, P.O.Box 71, Speicher, 54658 Germany. Don't send QSL via homecall (V31YM).

GM, ST. KILDA ISLAND. This Scottish island has an IOTA of EU-059 and will be activated on the 25th of July as GB4KLD, mainly for WAB purposes (all 4 squares). No other info is availabe at the moment.

IOTA DXPEDITION (Attention "Prefix Hunters"). A group of hams from the Province of Colon (HP2) will activate two or three islands in the island group in the Province of Chiriqui (HP3) with the IOTA reference number of NA-071. The operators Jose/HP2CWB, Emilio/HP2DFU, Ricardo/HP2CTM and Guillermo/HP2DUI will be using special callsigns of 3F3C, H33C and HO3C, each on a different island. The planned days for this DXpedition are July 1st and the 2nd. They will be active on 80-10 meters including the WARC bands, but only on SSB. QSL direct to HP2CWB, Jose NG Lee, P.O. Box 728, Colon, Republic of Panama or via the HP QSL Bureau.

NA-067, HATTERAS ISLAND, NORTH CAROLINA. Randy, KD8JN, will be active from July 8-15th. He will be signing KD8JN/4 and will be operating 10-80 meters including the WARC bands using primarily SSB, but will give CW QSO's on request. Randy will

be using an ICOM 751 into a vertical and also wire antennas.

OY, FAROE ISLANDS. A Belgian amateur radio team will go to the Faroe islands EU-018 to activate a station during the next IOTA Contest. The team will be active the last week of July and the first week of August. During the IOTA Contest, which starts the 29th of July at 1200z and ends on the 30th of July at 1200z, the group will be able to use a special call sign of OY6A. The operation will be carried out with the help of the Faroes Amateur Club. They will operate in the Multi/Op class during the 24 hours of the contest and in both CW and Phone modes. Before and after the contest they will transmit from a portable station on several islands of the Faroes archipelago. You should mainly look for them near the IOTA frequencies. The operators will be N4XYA, ON4LZ, ON6QR and ON7PC.

Claus, DK9FE, will also be active from July 10-27. He will operate mostly CW on 80-10 meters and the WARC bands (about 15 kHz from the band edge).

SEBORGA - "PREFIX CLARIFICATION". Holger, DK8KW, has faxed OPDX the following information: "There has been some confusion about the actual prefix allocation for the "Principality of Seborga" recently. After official talks with the ITU in Geneva on May 17, 1995, the Seborgian authorites applied for the unallocated prefix block T8A-T8Z. As the Principality of Seborga is not a member of the ITU yet, this application has to be supported by a country which has full membership of this international organization.
Although it was expected, that the prefix allocation is effective May 19, 1995, processing of the application obviously takes longer due to administrative reasons. Therefore, Paul, I1RBJ, who has activated the official station in the Prince's palace in Seborga as T88A has now temporarily suspended the operation until the situation is completely re-solved.

To allow the continuation of the operation of guest operators on the territory of Seborga, it was decided that temporary licenses will be issued using the homecall followed by the callsign extension /1P until a new callsign system is in place. Application for visitor's licenses should be sent to: Direzione Generale Telecomunicazioni, Piazza San Martino, 1, SB-18012 Seborga, Principato di Seborga (via Italy).

TM7I. F5JYD informs OPDX that the LOOS DX GANG will be active with TM7I callsign from some Normandy and Britany Islands for IOTA program & DIFM. QSL via F5JYD.

VI7DI, DEAL ISLAND 1996 DXPEDITION. An international team (Marek/VK3DO, Jurek/VK3OO, Barry/VK3XV, Tad/VK3UX, Mirek/VK3DXI, Jacek/VK5CJC, Wlodek/SP5DDJ, Ed/W6KCB,

Jurek/4X6RM and some more) will organize a DXpedition to Deal Island in the Kent Group (IOTA OC-195) from February 8-15th in 1996. The callsign will be VI7DI. All contacts will be confirmed with a special QSL. The island is located at 147 55'E, 37 34'S some 45 miles from the Victoria state. On the island stands the highest lighthouse in Australia which is not active anymore. Operators will reach the island by very difficult waters of Bass Strait. There will be more information available at a later date.

VK9X, CHRISTMAS ISLAND. Ken, JA1CMD/AD4WF plans an operation from June 23-26th, as VK9XH. Activity will be on 80-10 meters (including the WARC bands), mainly CW with a TS-50 (50W) and Windom antenna. QSL to JA1CMD via JARL only or direct to AD4WF via 95 CBA.

In article <3s1j1c$2pae@usenetp1.news.prodigy.com>, CVQX20A@prodigy.com
says...
>Since they would
>have "coordination (if that's what you want to call what SCRBBA does))
>then where does that place the rest of the amateurs? Out in the cold.
>SCRBBA is a joke. Carl Pagel is also getting on my nerves. I have sent
>him 2 letters (over 2 months ago) and he's the secretary of SCRBBA? Well
>Mr. Secretary, why no answer??
>
>
>ScottPress
>

Scott's experience with SCRBBA illustrates why it should be disregarded as a coordination authority. Not answering inquiries from amateurs it does not wish to coordinate (arbitrarily, capriciously, without any reason) is its hallmark. Although Mr. Reese, Mr. Maynard, and others would have us simply knuckle under to this sort of practice, other alternatives should be pursued.

Well I guess it's time for you to sign off the BBS you are using, with it's
arbitrary message size limitation, and get on a real internet provder.
Eiterh that or want for the 5 parts to come down via Fidonet, (don't hold
your breath, we have echomail problems down here due to someone playing
politics).

In any case, by effectively shorting (bridgeing to a common point) the tower base and the three guy wires, eliminates the possiblity for ground loops, correct? Bascially, all grounds go to a common point (by the utility meter) and are starred out from there.

I'm going to have to do a little rework this summer. I've been lucky so far!

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-19 00:00:00 UTC
From: "Charles H. Reichert" <reichert>
Message-ID: <3s4h9q$t76@newdelph.cig.mot.com>
Source record: 244258

Not sure of the Canadian regulations on RFI but here in the states cordless or portable phone owners must accept the fact their toys will receive RFI from nearby transmitters per some FCC reg. This warning also has been seen on VCR's. Basically the manufacturer is telling the owner (who never reads the fine print) that they are paying money from a piece of crap!

Also baby monitors operating just below 50Mhz are a source and cause of grief.

But try to explain this diplomatically to your neighbor!

Chuck

Ed Ellers (kd4awq@iglou.com) wrote:

: My idea would be to abolish the present Advanced and Extra writtens and
: create a series of 25-question modules with Extra-level questions -- one on
: space operations, one on HF propagation and operating practices, one on
: VHF/UHF/SHF propagation and operating practices, one on digital
: communications, etc. For a General ticket you'd have to pass the present
: Novice and General written elements, and *either* 13 wpm code or one of the
: new modules. To go Advanced (assuming we didn't drop Advanced and Extra as
: you propose) you'd have to pass *both* 13 wpm and one of the new modules; for
: an Extra ticket you'd have to pass 20 wpm code and *two* of the new written
: elements.

Only a brave man suggests such things on this net!

Hey, we could go to a "distributed" licence without discrete steps:

Only one exam, but with a wide range of levels of questions. You have
to get a score over xx percent to get a licence. All bands are treated
as scales of 0 to 100% and you get to use from the bottom of the band up
to your exam score! for added fun, let exam scores not be rounded to
integer numbers of percent. To aid enforcement, the score has to always
be appended to the callsign.

Great! loads of incentive, plus certified bragging rights
adds a new challenge to contest exchanges!

Cheers,
David GM4ZNX???.???????%

5289. Need 50 mile range on HF

Hi Daniel!
Your best bet is to use 80 meters, NOT 40!
40 might work, but honestly, you should try 80 or even
160 meters first. Antennas may be a challenge for you.
Will you have a fixed antenna at both locations or will you
be mobile? Efficiency of mobile antennas on 80 or 160
is going to be rather low, but nevertheless, I know a lot of
ops who have done well with this.

Let us know how it works out for you!

I have 1 or 2 programs that will do this. Never tested them so I don't know if they work but they are supposed to. I have them on my llbbs at 303-431-4800, full access on first call, 14.4. Or I could email attach them to anyone who is intested. Let me know in email.

Also, I don't think they are specifically designed for Wildcat which doesn't matter I guess. I was going to test it on my Wildcat but never got around to it.

armond@delphi.com wrote:

: And the import duties charged by G-VK-ZL, to pay the lazy
: lout civil servants run the prices up monstrously.

Um, well, I can buy an HF radio, for example, in the good ol'USA,
paying uncle Sam his import duty and sales taxes. I can carry it with me
back to G-land, pay import duty and VAT (Our equivalent of sales tax,
and at 17.5%, I suggest that it stands for Viciously Added Tax) AND
STILL HAVE SAVED OVER 1/3 of the British price.

Granted, I harbour feelings not much removed from yours about our tax
levels here, but it looks like the importers/retailers are sticking on
an EXTRA 100% mark up, when you consider that they import directly from
Japan and do not pay US taxes. If our pinko politicos are shafting us,
then the true blue free enterprise traders are doing measurably worse.

I can't remember the source of the quote but it might have been
Heinlein:

"Politics, they come and go, but greed goes on forever..."

(Would you dare suggest to Mrs T that she was even slightly
socialist ? If you want to try, I want to stand at a safe distance,
John)

hduff@humnet.westonia.com wrote:

: TO: Jim Cummings
: This is in reply to your reply to my reply...I didn't want to waste more
: space with the previous pages to this chapter.

: 1. I didn't imply that CW itself avoids interference or carelessness,
: it is the higher level of competence gained thru the additional testing.
: CW just happens to fill this need (still) until something that may be
: more relevant can replace it.

But you have yet to demonstrate that anything substantial would be lost
by discontinuing CW testing for operation on the HF frequency. In
addition, you have not demonstrated the causal link the Morse code
engenders a higher leve of competence, and there is no doubt that you
never will.

: 2. Regarding your suggestion that CW is not relevant in the 90's,
: what do you suggest should replace it to uphold the required amount
: of testing that should be maintained to yield competent operators ?

Since you have not proved that the loss of CW would be detrimental to HF
operation, it would follow that "further" testing would be illogical, if
indeed the current regime is sufficient. In other words, if the current
written exam is sufficient, Morse code testing does not increase an
individual's competence, nor is "harder" examination called for.

: 3. Your silly analogies of Doctors and rags or cars and buggy whips are
: totally out of context. Contrary to the "CW is outdated and old
: fashioned" rumours, CW is STILL very useful (and used) in many facets
: of the hobby. EME, weak signal V/U/SHF work, satellite ROBOTS,
: Identifiers, QRP CW fun and just plain good old HF CW on all bands !
: Sure, whips were used for horse buggies...but never for cars.
: CW has always been a part of Amateur Radio though other forms of
: communication were around before radio.

My analogies are silly only because you are unable to effectively counter
them.

In any event, since amateur radio is (or soon will be) the remaining
service whereby some of the participants will be required to know the
Morse code, then it is indeed obsolete. If individuals wish to use Morse
code as a means of communications, more power to them; it is too bad that
they avoid to use more efficient means. However, that amateur
communicate in the Morse code does not justify
the necessity for testing. In looking at
your list of activities in the above paragraph, you have conveniently

proved my point. Most of those activities, as you have pointed out, are undertaken on frequencies above 30 MHz. As you are aware, it is no longer a requirement, in Canada, to be demonstrate knowledge of the Morse code for operators limited to above 30 MHz. Therefore, since these individuals may use Morse code, without prior government testing, for those acitivities above 30 MHz, what are the conditions that necessitates mandatory testing of the Morse code below that frequency? The short answer, I am sure you will agree, is that there are none.

: 4. RE: The big manufacturers lobbying the governments to make changes...
: I recall reading such sentiments in the front of QST some years ago.
: Of course, I cannot produce it for you now...in retrospect, I should
: have kept the clippings.

What lobbying initiatives are undertaken in the US are of little concern to me and are irrelevant to the Canadian context. In any case, if their lobbying was so successful, why did it take the US to institute a no-code license 13 years (I believe) after Canada had done so?

In any case, talk is cheap - provide the evidence or admit that your musings have no foundations.

: C'mon Jim...you choose not to believe that they had a part in padding
: the hands of the lobbiests when no-code licencing was being
: discussed ?

I choose not to believe it because I know it is true from personal experience.

: What cave are you living in ?

I do not live in a cave. I live in a house. Just because I disagree with you, does give you licence to insult me. However, it is not surprising that you would stoop to insults when you have nothing to support your arguments and are shown for what you are.

: Do you think no-code
: licencing was all the doing of the FCC and ISC without pressure from
: outside groups ?

Yes - if you read the RIAS of the restructuring of the amateur service which introduced the current licensing structure, you would realize how foolish your question is.

: You had better believe the Big-3 had their say !!!

You will not find any proof to this assertion because it did not happen that way.

: 5. RE: my sadness of the technical element of Ham Radio (it's roots)
: being lost...you reply.."So what? That has occurred despite the
: changes to the examination process, changing it is not going to get
: us back to the "good old days".
: Agreed...Sad but true ! I'm into the hobby for the technical aspect

: and I guess I'm bothered by the fact that the flood of new hams is
: not bringing with it a proportionate ratio of "techies" whom I could
: share interests with.

That's another discussion, but the fact that we are not bringing in
"techies" is a marvellous aspect to the hobby and is breathing in fresh
ideas.

: My 'other problem' is that I had to EARN the HF privledge and feel that
: what is being asked in testing (including CW) is not too much to ask for
: the privledges given. This is not to say that "I had to learn CW...
: so should you".

Yes it is if you cannot demonstrably prove that CW operation is vital.
As you have side in your previous posting, and pointed out in this, it is
not so.

: I simply believe that that same stringent requirements
: placed on me should be continued whether or not CW is part of it.

Again, talk is cheap. What do you mean? What does stringent mean to you?

: I suppose
: that a replacement for CW cannot be formulated at this time and since CW
: is still used in Amateur Radio, it continues to serve its function as a
: competence level filter.

And a poor one at that. For example, in the US, I understand that all
the Notice of Apparent Liability Notices, which is a series of
administrative fines, are issued again coded amateurs. I have yet to
read of an instances where a no-code amateur has been so cited. So it is
not the lid filter that it thought it was supposed to be.

: Again, I refuse to believe that any advocate to ANTI-CW testing for HF
: has absoultely nothing to gain, notwithstanding the folks who want it
: without having to EARN it.

Insisting that you learn something which is not obligatory has nothing to
say for it either. I agree that the privileges have to be earned,
whatever that means, but it has to be relavent to the activity the is
subsequently permitted.

: For those of you who insist...let's hear the
: suggestions of what should replace CW to maintain the current level of
: standards for operator comptetence.(Spare me the "...competence??? Have
: you listened to 20 meters lately ?... garb. There will always be bad
: apples in the bunch.)

What are your proposals then?

: Regards... Hugh Duff VA3TO Toronto

Burt Fisher (K1OIK@ccsnet.com) blathered:

: Your credibility is lacking as you quoted me out of context.
: No ham will get the movie and you are a prima face evidence of same.
: The movie is not merely an affair. Would you simply define sex as "an act?"
: If you are a typical ham, I am sure you would.

Burt suffers from a Chestertonian-Messianic complex. He feels that
it is his duty and contribution to the amateur world to stir up
flames. He does this--in spite of his hidden good nature and easy going
attitude--to point out in a dramatic way the parochialism and
prudishness of hams in general.

Of course, Burt is wrong. In general the values he promotes are
degenerate, and despite his rationalized "good intentions", the
real reason for his behavior is simply that he is a control freak.

His own life is unfulfilling, he has no power over the real world,
so he turns to flaming--a common malady. Oh well.

Best just to ignore him, he _will_ go away if he is not encouraged.

> My wife and I are hams and have need to keep in
> communications while I am on the coast.
> we have found that the 2-meter repeaters don't
> afford the flexibility or privacy

>> Well, Dan, with great respect, but I have to wonder if amateur radio
>> is the medium you should be using to discuss your private affairs
>> with your wife or anyone else. I thought amateur radio existed, in
>> part, to further the science of radio. Perhaps you should consider a
>> commercial radio service of some sort.
When I mention privacy, I am referring to a discussion of meaning
between two consenting radio amateurs, using this medium to accomplish
something of value, justifying the labor it took to get our licenses,
the money to buy the equipment, and the frequency spectrum we utilize.
2-meter repeater activity seems to consist of bored individuals who
just put the latest HT on their charge card, and who are engaged in
spirited debates of whether Kenwood or Icom has the most features, or
the relative merits of 1/2 vs 5/8 wave verticals, Larsen vs Diamond,
ad nauseum. All I hear on our local repeater, is where these dullards
are going to lunch, what they watched last night on TV, and lately,
I have heard many deflamatory remarks against women, racial discrimination,
and I feel it is appalling and a true waste of the electromagnetic
spectrum. Ham radio is truly changing .. and not for the better. Though
there are many fine amateurs who take pride in their hobby and are
respectful of their fellow hams, I have seen too many indications of
of why I think code should be a filtering requirement.

QSO's between my wife and myself, discussing matters related to our family,
or topics that I do not feel need to be discussed on a public repeater
when others have a better use for it, are not to be discouraged. It
is our form of useful communication, that certainly can be monitored
by all, and we welcome discussion with all. I will put this up
against the drivel I hear on 2m, autopatched ordering of pizzas, or
discussions of what they had for lunch, where they are driving to,
or their comments regarding their fellow drivers. In the majority,
it seems that instead of good listeners, we now have a proliferation
of hams that only enjoy hearing their own voice.

5299. 6 Meters, Cordless Phone and RFI :-(

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-19 00:00:00 UTC
From: seeler@UPEI.CA
Message-ID: <seeler.195.803578246@UPEI.CA>
Source record: 244271

Hi - This past weekend I ran into a problem with RFI in a neighbour's Cordless handset..... :-(right in the middle of one of the best openings PEI (FN86) has had in two years - Miami to the Azores were coming in 5x5 plus.

And I had to QRT in the interests of neighbourly relations.....

First the basics - TS-690s, a B&W low pass filter within 2" of rig's output, High quality RG213, ground less than (approx) 3 meters from rig(connected with grounding strap to 8 ft ground rod.

NO interfernce in MY phone system except my cordless phone can pick up my communications (ie it operates on 46.xxx MHz and when online my wife could here me calling CQ) when online. Tested all other phones in the house and no problems at all. The interference occurs on SSB ONLY - FM has no effect.

It would appear that the handsets (mine in the tests - and the neighbours) are picking up my SSB transmissions due to a wide front end. The only time the interfernce is heard is when the cordless phone is on-line and it seems to be less as the handset is moved away from the rig area or antenna but still clear copy :-)

So my question is this - What can be done about this????? Most of the info - including the RFI materials and book from the ARRL suggest that cordless phone are not a problem - but not so in this case.

If it is a front end problem of the handsets (RFI filters on base etc had no effect) then I can see no obvious solution that the neighbour would like..... boat anchor anyone?????

The other option is to put a tower up with directional antenna(using a vertical antenna right now cushcraft); and trying to get a better ground (last month a new water line was put in and I have 40 feet type K copper water line underground to the main line entering the house about 17 feet from the station/rig - perhaps a 6 meter long grnd strap to the pipe where it enters the basement?).

SUGGESTIONS and comments would be greatly appreciated - this past weekend was the best opening PEI had in 3 years and I hated to loose a large number of new grid squares... :-(

I know the cordless phones are type 15 (FCC) in the US - any Canadian readers know their status in Canada?

Thanks in advance for any help you might be able to provide.

Best Regards,
David Seeler, VY2DCS

I would too. I'd like to know if this is the same ARRL official who is rumoured to be behind the rogue coordinating committee operating in the LA area that's coordinating repeaters onto simplex frequencies, across pairs, and on top of operating machines - supposedly because "all existing coordinations are invalid".

Feh.

I predict the pre-coordination repeater wars of the 70's are about to erupt in Los Angeles again. Last time they were fought with chain saws and axes.

Do we really want that kind of crap again?
- Brian

Nil in 30/32AWG, however in 28AWG try Belden #9636 for 15 cond. or
9637 for 25 cond.
For low voltage try Belden #9797 for 15 cond. or 9798 for 25 cond.
You may like to use multi-pair Belden #9809 or 9810.

The rub with this is getting your laser printer to cooperate (long term :-)
with card stock. But running off one master with 2-3 cards per sheet and
then having a local place like OfficeMax copy a small number to colored card
stock with a machine that can handle it properly is very easy. By
coincidence I just did this at lunch. Fifty QSL cards, $2.39 and "custom
designed" the way I wanted them.

: QST, May 1995, reports on page 43, that ARRL has nearly 3 MILLION
: dollars in "Unrestricted Undesignated Fund balances" at the end of 1994.

Way to go, ARRL!! Applause! Cheers! Any organization that can
accumulate that much cash deserves some admiration!

: QST, page 44 income statement shows that ARRL collected in 1994 FAR more
: revenue from publications sales and advertising than they did from
: membership dues.

Good deal! Those must be pretty good books. I hope the authors enjoy
their royalties!

: I'm surprised that KPMG Peat Marwick LLP doesn't challenge the ARRL's
: "not for profit" status in their "Independent Auditors' Report".

I gather that there is no basis for such a challenge. Must mean that
the League's lawyers and accountants know their stuff!!

: The ARRL claims that the large amounts of publishing and advertising
: activity is "necessary or incidental to its purpose".

Has been for 80 years or so. Looks like a reasonable statement to me.

: Many of us believe that many hams send "dues" into the ARRL solely to
: get the QST magazine. I suggest that the ARRL ought to pay their
: fair share of income tax just like all the other large U.S. publishing
: and advertising companies.

And, many of us believe that we pay dues to an organization and get
something more than a magazine subscription.

I suggest that the ARRL make darn sure that we (the ARRL) retain our
tax exempt status! The last thing that I want to do is give more money
to the Government! If the ARRL has a surplus (which I doubt!), I
suggest they increase the Directors' budgets and the SMs' budgets.
And, if there is any money left, I would like to see a paid ARRL
representative in major cities. I would like to see the ARRL produce
and sponsor a PBS program on amateur radio. Maybe they could put
another ARRL station on the air on the west coast. Finally, maybe
there are some deserving members of the staff who could use a salary
increase.

Just don't give any more money to the Government!

: It's my understanding that the 24 time zones around the world are labeled
: with
: letters and that's why UTC is commonly called Zulu time, because it's in
: time zone "Z".

: I can't find any reference to this except to a cryptic footnote in the ARRL

: handbook which refers to just the four time zones of the US.

: Can anyone provide a table listing the timezone letters and the
: corresponding
: offset from UTC or point to some reference that lists them?

There's a doohickey in many ARRL books that converts time which also
has the scheme on it. Z, for zero, is UTC. UTC+1 is A, and the
letters continue in that direction until M, skipping J for clarity.
UTC-1 gets assigned N, and the letters increase in that direction
until Y. It's a handy system that allows you to write date and time
unambigously for most time zones in the world, it's
language-independent and it's pretty compact, too.

From: howard@migsol.com
Message-ID: <DAFMwA.DLC@migsol.com>
Source record: 244283

Hello:

I think we have an unlicensed operator here in the are who has madeup
his own callsign. The callsign look valid, but when I looked it up he
was not in the data base. I used the data base at "callsign.ualr.edu", it
is updated from the FCC data base daily and has callsigns on both side of the
one in question. Also from this persons operating practices and question it
looks like he has not even studied for the test.

I have heard from other people who also think he is unlicensed and he
is making people on the repeater(s) mad by disrupting in progress QSL's.

Does anyone know a better way to check a callsign ?.

What should one do about such a person ?.

Please E-mail me at howard@migsol.com

Thank you

i'd suggest reading the IRS rules on non-profit organizations. KPMG et al
don't decide if you have non-profit standing with the government.

you don't get QST w/o being an ARRL member (some exception exists for
places like libraries and you can buy it off the newsstand). no matter what
YOU call it, the ARRL calls you a MEMBER....

Yes, a random wire will work with a cheap tuner. I would first consider using resonant dipoles in
an inverted V configuration. You can bend them several times to fit into small spaces. Keep the
bends >/= 90 deg.

You can connect antennas for different bands at one apex connection. This type of antenna is good
for attics where space is limted. And, for HF, contrary to popular belief, as long as the roofing material
is wood and the shingles are asphalt, frequencies in the 1.8 - 30Mhz range effectively are transparent
to the 'roof' - even the nails. With the random wire and tuner, you will get out but a lot will be dissipated
in the "tuner". If you do go that route (ie, a non-resonant antenna), try to use a transmission line that
will not dissipate much of the resulting standing wave (like ladder line but not coax). I forget to mention
that for the inverted V, use a center connector that is also a current or voltage balun (about $20.00
from any wire antenna supplier you might see advertizing in QST or CQ). Good luck.

The reason they only run 100 watts and a wire is because they can't afford any more than that. "A greater percentage of hams around the world" live in goof-ball socialist, collectivist countries where the governments screw up the economies. And the import duties charged by G-VK-ZL, to pay the lazy lout civil servants run the prices up monstrously.

Jim, what I think is really happening is that you are backing off of your earlier, vitrolic, pro-SCRBBA position in response to the barrage of facts regarding SCRBBA from Scott and others. I went back and re-read your old posts, and they are chock full of comments to the effect that you know the guys in SCRBBA, they are great guys, etc.

But maybe you are changing your mind. If true, why not say so?

I suspect that you have been pursuaded by the real-world experiences of people who actually live out here and know the conditions.

As Nikita Khruschev said, nothing substitutes for seeing things with your own eyes...

Richard Karlquist (rkarlqu@scd.hp.com) wrote:
: IMHO, the time has come for a serious look at ARRL divesting its publishing
: business and getting back to being a membership organization.
: The publishing arm of ARRL already behaves as a for-profit business
: looking to optimize its own interests, rather than serve as an
: arm of ARRL. There is a tendancy to publish what is profitable, rather
: than what it most beneficial to amateur radio. I.e., a publication on
: some specialized communication technique may sell only a small number
: of copies, but they will mostly go to pioneers that will benefit ham
: radio in the long run. On the other hand, "101 ways to use a 555 timer"
: is mainly a money maker, and will have negligible impact on the hobby.

Hold on...You can't have it both ways! First you say divest itself
of the publishing arm, then you gripe about them not publishing
enough books on arcane subjects! Which do you want!

If they divest themselves of the publishing arm(but retain QST for
obvious reasons) then how would they publish arcane stuff? Publish
it all in QST? Yeah right...

QST is a general purpose publication, i.e. it HAS to be pablum cuz
the audience is SO diverse.. And the league does have several
specialist publications... I'll wager you just don't happen to like
the choices SO FAR! The specialist stuff that comes to mind
immediately are the Contest Journal, and QEX. You get rid of the
publishing arm...these go away too! (Or are you just gripping about
micro-wave coverage(a favorite topic of this group over the years?)

Further, do you want your dues to go up AGAIN! They'd go up by
a pretty sizeable chunk. Last I heard(admittedly two years or so
ago...) Dues pays for approximately 1/3 of the operating budget.
That extra dough has to come from somewhere.

Lastly, please define "league services." There is MUCH more to
league services than JUST the publishing operation. There is a
HUGE field organization that deals with emegency communications,
local RFI, technical support, public awareness, etc. available
thru volunteer efforts, and then there is the membership services
provided by by the under-paid staff! Items such as legal information,
licencsing requirements in other countries, QSL services, different
contest programs, DXCC, field-operations support, etc. So, which
services have you even chosen to use/participate in, and what
was wrong with same?

: Contrast this situation to the IEEE, which actually loses serious money
: on publications. But the publications pay enormous intangible dividends

: to the profession as a whole. The IEEE doesn't try to compete with
: McGraw Hill, Wiley, Sams, etc., and the electronic trade journals.
: (Someone will no doubt point out the presence of "publish or perish"
: papers by academics in IEEE transactions; yes, nothing is perfect).

: Rick Karlquist N6RK
: rkarlqu@scd.hp.com

Yeah...IEEE.... An organization I belonged too for 14 years, then
I finally decided that I was tired of looking at specialized journals
that were mainly used for Phd's to get their tenure. In my experience
with IEEE, the vast majority of their publications have no bearing
to real-life engineering issues. I can't recall but maybe two
articles in 14 years that made a difference in how I practice engineering.

>things like:

Wasn't intended to be bold, but I have admitted it was pretty vague. You need to read some of my other reponses. I said I wasn't going to drag this on and on but I guess I can't help myself - so I will address some of your comments.

>Has anyone been written up for transmitting a message like:
>"Jim, I know you're probably out of range with that HT by now, but if you can
>hear me, meet me at ..... This is xxxxxx, clear."
>That is absolutely a one-way page, as Jim is not expected to answer. But the
>originator and the recipient of the message are licensed, the transmission is
>identified, and the content of the message is allowed under the rules. Other
>one-way applications are a grey area, but John didn't say exactly how he
>wanted to use the system.

While I don't know of anyone who has been written up for this type of transmission, and I really don't care - if you really want to get into the technicalities of part 97, this would be a prohibited transmission. Is it telecommand? No. Is it a brief one way transmission to establish two way communication? No, you said you knew the other party can't answer. "Paging" can be used to establish two way communciations - it's commanly referred to as selective calling/signalling. Is it an auxilary operation? No. Is it to provide emergency communcations? No. Is it a bulletin that requires disemination? Not if it's directed to one person. Is it required to make an adjustment to a station? No.

If someone is marginal from an HT and you have lousy copy, you could still call it two way communication.

>Many voice repeater controllers can encode tones to activate receive-only
>pagers, presumably the pagers are carried by members of the club. After the
>pager receives the tones, it will switch its speaker on and the originator of
>the page can transmit a one-way message. This feature is often used in the
>amateur bands.

Disemination of bulletins to the ham communinty is authorized and we call it a QST. So would one way calls for emergencies. It could also be used as a form

of selective calling if you intend for the recipient to repsond.

>These fancy repeater controllers have been heard to automatically send
>messages like "Club meeting Monday at 8:00 PM" Is this not a "page" to
>members of the club?

No, not a page, a one way bulletin, maybe.

>On packet (considered by most to be a legal mode of operation) we have
>
>APRS: "This is xxxxxxx. My location is xxxxxx." transmitted periodically,
>without regard to whether anyone is receiving or not. This type of
>transmission qualifies as a "beacon station" under the rules. It is not a
>proposition for a two-way contact.

It is a beacon, as you said. Not a page. It could also be equated to a "CQ" -
which is not a page - it's a call trying to establish two way communications.

>Other stations: "This is xxxxxx. BBS at xxxxxx-1"
>Once again, more than just the ID of the station is being transmitted, the
>one-way message contains additional information.

Again, a beacon or a periodic call, not a page. Both of the above can be
called beacons but they probably aren't since they usually aren't there for
propogation or reception observations, nor experiments. BBS often send out a
ID with an announcement of mail waiting for users. That's not a beacon, it's a
call for folks to come get their mail.

>So one-way messages are sent all the time in the amateur bands, many of them
>less-well defined than sending a page to a specific receiver known to be
>carried by an amateur operator. A blanket statement that "Amateurs can't
>engage in one way paging" is hard to justify.

Not really. Sending one way messages to other amateurs stations is only
authorized for specific purposes. Sending a one way message to another amateur
via a recieve only pager does not, the way I see it, qualify. - Unless the
content of the message makes it a permissable one way communication (emergency,
bulletin, a call attempting two way contact, etc.) So perhaps we just need to
look at what I was thinking when I referred to "one way paging" - a one way
message or signal to another operator not permitted by part 97.

So perhaps my statement was not that bold. I was just being pretty literal.
But remeber, I don't lay down the law - I just read it like everyone else. You
do not have to take anything I say as abosolute. Just like I give no
credibility to Larry Roll's anti no-code spleen venting.

OK?

>By the way, I think the Radio Shack pagers work in the 11 meter band, in one
>of the 4 or 5 gaps in the original 23 channel allocation (Channels 24-40 are
>contiguous). These other channels are designated for paging, remote control,
>etc,

Yes - 27.225 MHz (authorized power on this freq is 25 watts). BTW - being a part 95 device (I think), there is no requirement to identifiy transmissions. Part of any mod to bring this into a ham band would have to allow for that (CW/MCW or something). These part 95 devices are designed for type acceptance for part 95 R/C operations which means they cannot send messages for other than remote control of another device (no voice or telegraphy). They cannot be used for two way communcations (makes their use in ham pretty limited, as we have been discussing). And cannot be used to remotely control another transmitter. With these designs in mind, modification for more than very limited ham use is probably not practical. But knock yourself out - if you want to. Far be it from me to stop an amateur experiment.

5347. Subject: Ugly American hams?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-20 00:00:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2FE6826A@smtp>
Source record: 244099

For your info:
in Europe import tariffs are set by the European Commission and not by Member states individually. In the case of transceivers, the rate is 6.5% (European customs code: 85252090). Onto this is added the VAT (17.5% in the UK, 21.5% in Ireland) and so on.

The dealer and the main wholesaler make MOST of the money not the customs duty. Ham Radio outlet in the US probably operates at a margin of about 12%. Lowe electronics in the UK has a margin of about 38%. See the difference?

You can go to the US, buy a radio, pay the 6.5% and the VAT and still save lots of money, even after paying for a ticket.

Scott Erlich, in his response, is right about the slow speed of HF. Above 30 MHz, however, it's all open to exploration. The answer is yes, of course, and as long as a network exists you won't need a shortwave connection. Check out July's QST on page 37 for more information, and good luck!

Hams,

The San Francisco Neighborhood Emergency Response Team (NERT) program is designed to mitigate the effects of the first 72 hours after the Big One hits. Communications is an important facet of this plan.

I'm looking for hams that live in the Haight-Asbury neighborhood, South of Fulton Avenue, North of 17th Avenue, West of Divisadero, East of UCSF. If you're interested in providing post-apocalyptic communications, please let me know. Thanks.

73s, KE6DZF.

* * * * * * * YL PACKET MAILING LIST * * * * * * *

I am proud to announce the formation of the private mail YL PACKET MAILING LIST! This list was created in the hopes of being able to reach more YLs and other interested parties, that otherwise have a hard time getting regular YL net bulletins via packet BBSs.

The process is simple. If you would like to join the YL Mailing List, send the following information via private packet mail to me at my packet address. (follows)

Callsign
First and Last Name
Mailing Address
City, State, ZipCode
Your COMPLETE BBS MAILING ADDRESS (Ex: N0UTX@N0UTX.#SEMO.MO.USA.NOAM)

The mailing list is a private way to send mail to EVERYONE who signs up to the list. Everyone will receive a copy of the letters that others send to our mailing list server.

The message does not need any special form or anything. Just make sure you are sending a PRIVATE PACKET MESSAGE (SP). Do NOT send the message for subscribing to the normal YL @ ALLUSA address. I might not see them here!

I look forward to seeing you all in the mailbox!

73 and 33!
-Gayle Albert, YL Mailing List Coordinator

(If you'd like to sign up via Internet, feel free to send the same info to me at this address. Note, this is NOT a Internet Mailing List at this time. I'm working on getting a digest version available)

Hi All - Yes Burt Fisher is a real person and a teacher and the father of
a brilliant little girl who has consistently won high honors in state
mathematics competitions.
I live in the same general area as Burt and have spoken to him on local
radio. However, I have never met or socialized with the man yet have
spoke with many people who do know him personally.
Around here are people who dislike Burt as intensely as some of you.
There are also a fair number of people who will chat with him any old
time. Burt is kinda like a Gadfly stirring things up.
Whatever your feelings - love him - hate him - ignore him....the threat
(even somewhat veiled) of violence against this person is not only
reprehensible, but illegal. The Massachusetts State Police are very
concerned about computer coercion and threats of violence in gereral via
this medium. There have been sucessful prosecutions and hefty prison
terms given out for the above mentioned felonies in this great
Commomwealth.

I like 30 meters *a lot*! It's a nice "evening" band for DX, esp.
European DX; I'm only a casual DXer, but I have about 60 countries on
30 without trying very hard (I run an Icom IC-735 at 75 watts to a G5RV
dipole). 'Course, it *is* CW-only.

I've also tried 17 meters occasionally and picked up a few new countries
there, but someone who's more into it would have to tell you how "hot" it
is. Haven't tried 12 at all.....

5357. Info on amateur radio astronomy: RASC, IEEE

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-20 00:00:00 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.803656593@melpar>
Source record: 244109

The following two references are of general interest to those involved (or thinking of getting involved) in radio astronomy at the amateur level. The first article is particularly valuable for the home experimenter, while the second is more a "status of the state of the art" at the professional level (interesting stuff, though):

I. "My Radio Telescope" by Bob Drury (Alberta, Canada), Journal of the Royal Astronomical Society of Canada, Vol. 89, No. 2, April, 1995, pp. 72-80. (contact RASC at 136 DuPont Street, Toronto, Ontario, Canada M5R 1V2. Single copies of the Journal are available for $12.00)

At the age of 13, Bob Drury built a functional interferometer radio telescope for operation at 19 MHz using two corner-reflector antennas with dipoles as driven elements, a "ghetto blaster" with shortwave coverage to 20 MHz as a receiver, and a Rustrak chart recorder borrowed from the University of Alberta. Using this *very* "homebrew" setup he successfully charted a number of astronomical objects including Cygnus A.

This delightful article, written after Bob turned 14, describes the trials of this young experimenter's efforts to successfully enter the world of radio astronomy, from rabbits nibbling on his coax to successfully modifying his receiver for improved RF sensitivity and proper power combination from the two antennas. If you're interested in how to get started, this article is a *must* read!

BTW, young Bob is *not* a ham but is "learning electronics and radio" as he goes along. From what the article says, he already knows more about antennas, coax, and the insides of a receiver than a great many hams.

II. Proceedings of the IEEE, Vol. 82, No. 5, May, 1994.

The entire issue is devoted to the subject of Radio Telescopes, and features a total of eighteen articles. (Contact IEEE at 445 Hoes Lane, P.O. Box 1331, Piscataway, NJ 08855-1331. Single issues of the Proceedings are available at $10.00 for IEEE members, $20.00 for non-members)

>until Y. It's a handy system that allows you to write date and time
>unambigously for most time zones in the world, it's
>language-independent and it's pretty compact, too.

This scheme is commonly used by the military to refer to the "local" time zone. For example, Eastern Standard Time is Romeo (R) time. This is used particularly aboard ships transiting east and west, which use "local" time for normal, day-to-day ship's activities and advance or retard the clock an hour every few days to conform to the "local" zone ("All ship's clocks will be advanced one hour at __________ to conform to (whatever) time.") Thus, Norfolk, VA is "Romeo," the next zone eastward is "Quebec," etc.

: > addition, you have not demonstrated the causal link the Morse code
: > engenders a higher leve of competence, and there is no doubt that you
: > never will.

: Common sense tells me that removing CW and not replacing it with
: some other form of testing to maintain the same level of competence
: would result in an influx of ignorant and/or incompetent operators on
: HF (why is there ANY testing at all ?).

Again, you have yet to show that Morse code testing proves competence to
operate on the HF bands. Unless you can otherwise show the causal
relationship between the two, there is only one place that it does exist
- in your head.

Since it cannot be proved that competency on the HF bands is not affected
one way or another by Morse code testing, it does not follow that
"harder" or "fruther" testing (whatever that means) is justified.

Unlike Morse code testing, verifying the technical competence of the
individual is a great concern. Since amateurs occupy spectrum and
operate their equipment with their fellow amateurs, share the spectrum
with other users and have neighbours who operate entertainment and
consumer equipments whose RF susceptibility is always in question,
testing of their competence to operate within this milieu is vital,
particularly for the privileges that are accorded to them like in no
other service.

In conclusion, your common sense bears further scrutiny.

: **
: >
: HD> : 2. Regarding your suggestion that CW is not relevant in the 90's,
: > : what do you suggest should replace it to uphold the required amount
: > : of testing that should be maintained to yield competent operators ?

: >
: JC> My analogies are silly only because you are unable to effectively counter
: > them.

: Huh ? I don't need to counter an analogy that has no relevence to the
: subject matter. The above text explains why they don't compare.

How convenient - ignore the challenge because you can't effectively
present a counter arguement.

: **
: >
: JC> In any event, since amateur radio is (or soon will be) the remaining
: > service whereby some of the participants will be required to know the
: > Morse code, then it is indeed obsolete. If individuals wish to use Morse
: > code as a means of communications, more power to them; it is too bad that
: > they avoid to use more efficient means.

: How do you render CW obsolete when it is still widely used on HF (and all
: of the other modes that I mentioned earlier...ya...even in the 90's) ???

Widely is rather subjective, the only other service to use it to any
discernable degree is in the martime mobile service and it will be no
longer in use by 1 February, 1999 upon the complete implementation of the
GMDSS. At that point, the amateur service will be the only service in
the radio frequency spectrum that will require a knowledge of the Morse
code. I would hardly call that a ringing endorsement of its widespread use.

: What might these modes be that can be demonstrated to be as effectively
: reliable in adverse conditions ? RTTY ? Baudot ? Packet ? ...NOT !!
: I challenge you to receive any digital mode in poor conditions. No
: machine can currently replace the human ear and mind to decode and fill
: in the blanks. Even in extreme signal-to-noise ratio conditions, the
: threshold of a machine would have to be set so sensitive that it would
: be trying to decode blips of noise where a human could still distinguish
: the tones.

Unless you have been living in a cave, it is well acknowledged that the
new digital techniques are superior to CW under adverse conditions. If
you don't believe me, get a hold of some of your amateur radio collegues
who use digital techniques and they will demonstrate their superiorities
to you.

: By the way, just for interest sake, I'm somewhat of a "Digital-Boy"
: ...I enjoy computing, discrete logic and microcontroller design and
: programming ect... I'm not necessarily "holding onto an era" of "living
: in the past" by stressing that CW still has it's place.

But despite your experience in computing, it is obvious that you have
failed to keep abreast of the digital techniques available to amateurs
today. Otherwise, you would not have claimed that CW is the best mode
for adverse conditions.

: **********

: JC> However, that amateur communicate in the Morse code does not justify

: JC> What lobbying initiatives are undertaken in the US are of little concern
: > to me and are irrelevant to the Canadian context. In any case, if their
: > lobbying was so successful, why did it take the US to institute a no-code
: > license 13 years (I believe) after Canada had done so?

: Hmm...is that it...are you one of the Digital class licencees ...naw...
: didn't you say that you presently hold the Advanced class of licence ?

As a matter of fact, I not only hold an Amateur Radio Operator's Advanced
Certificate, I also hold a Second Class Radio Operator's Certificate and a
GMDSS General Operator's Certificate. Since I hold more qualifications
than you do, should I not engage in the same inuendoes as you do? Hardly.
I argue on the merits of the discussion presented, I don't resort to
character assassination like you just tried to do.

: At any rate, we both know this was a different animal than what we currently
: know as no-code class of licence. (Do you think a BASIC licence holder
: could have passed the Digital test...for the mostpart, I doubt it.)

So what if they couldn't? It is a differenct examination and really
doesn't prove anything.

: The Digital class was intended for EXPERIMENTERS wishing to use radio as a
: medium of data transmission, not as a primer-to-get-your-feet-wet as is the
: current no-code licence. And of course, the Digital folks were not allowed
: HF privs without knowing CW. Do you wonder why ?

Hogwash. 75% of the digital certificates issued were to individuals who
already held either the Amateur or Amateur Advanced Certificate. Hardly
a ringing endorsement for the digital classs.

Yes, I can tell you why quite easily. The reason why they were not
accorded priviledges is that the ITU Radio Regulations stated that to
operate below 30 MHz, the operator must dmeonstrate a knowledge of Morse
code, pure and simple. After one year, they were qualified to sit for the
15 wpm exam and they were issued the Advanced certificate. It had nothing
to do with competence and everything to do with an treaty requirement.

: > : the privledges given. This is not to say that "I had to learn CW...
: > : so should you".
: >
: > Yes it is if you cannot demonstrably prove that CW operation is vital.
: > As you have side in your previous posting, and pointed out in this, it is
: > not so.
: >
: NO...NO... Why does CW have to be "vital" to the hobby ? It is

: certainly a related and useful skill and not "outdated and useless" like
: many of you folks would like everyone else to believe.
: But like I said in the last line, I don't want to ram CW down anyone's
: throat, I just beleive that it still serves its purpose in the test.

You can't have it both ways - you can't claim that you don't want to ram
CW down people's throat, yet still advocate that it is purposeful in
order to operate below 30 MHz. For the umpteenth time, how does
knowledge of the Morse code relate to the competence of the individual.
On the other hand, if CW is not vital, then why is testing necessary?

: **********
: >
: HD> : I simply believe that that same stringent requirements
: > : placed on me should be continued whether or not CW is part of it.
: >
: JC> Again, talk is cheap. What do you mean? What does stringent mean to you?
: >
: >

: Is the glass half full or half empty ? Is it sunny with cloud or cloudy
: with sun outside ? What came first, the chicken or the egg ?
: Uhh... Everything is relative to some sort of standard. The level of
: HF testing that has been with us for eons is what I say should be
: maintained. CW or no CW ! Many folks find the technical testing as well
: as the learning of CW "stringent" (but obviously possible).

I repeat - what do you mean? What des stringent mean to you?

Avoiding the question with platitudes is futile.

: **********

: >
: HD> : I suppose
: > : that a replacement for CW cannot be formulated at this time and since CW
: > : is still used in Amateur Radio, it continues to serve its function as a
: > : competence level filter.
: >
: JC> And a poor one at that. For example, in the US, I understand that all
: > the Notice of Apparent Liability Notices, which is a series of
: > administrative fines, are issued again coded amateurs. I have yet to
: > read of an instances where a no-code amateur has been so cited. So it is
: > not the lid filter that it thought it was supposed to be.
: >

: It's the nature of the beast that the said citations were issued against
: HF (coded) operators. This is where malicious operation can result in
: interfered communication halfway around the world and further proof
: to substantiate my stand on maintaining a high level of competence of HF
: operators. Officials have to act promptly on this kind of activity.
: Not to say that local interference from BASIC licencees on VHF and up
: is acceptable. JFYI, I recently read in the front of QST about an amateur

: in the U.S. who was caught interfering with airport communications on
: VHF... a pretty serious FEDERAL offence.

Be that as it may, why have these not been issued to no-code Techs?

: Notwithstanding, there are still bad apples on HF but the likelyhood of
: such events could increase if a certain level of competence in the
: testing for HF privs is lowered. Do you not agree ?

Not if the measure of the competence is measured by the individuals
capabilities to encode or decode a series of beeps. The knowledge of
Morse code does not impart competence, it is only a skill.

: **********

: HD> : Again, I refuse to believe that any advocate to ANTI-CW testing for HF
: > : has absoultely nothing to gain, notwithstanding the folks who want it
: > : without having to EARN it.
: >
: JC> Insisting that you learn something which is not obligatory has nothing to
: > say for it either. I agree that the privileges have to be earned,
: > whatever that means, but it has to be relavent to the activity the is
: > subsequently permitted.

: Well despite its demise in the commercial and military world, CW is still
: relative and still used and not outdated in Amateur Radio. Whatever might be
: MORE related to HF operation that upholds the required level of
: competence is welcomed on my part.
: All I keep hearing from you folk is that "CW should be scrapped but I
: don't know what should replace so maybe nothing should replace it..."
: It is to this that I say...bad move.

I am not advocating that it be replaced by anything. In fact, it does
not need to be replaced at all because knowledge of CW does not
demonstrate competence. I would change my mind if you could prove it,
but I asked a number of time for you to do so, and you have not done so.

: **********
: >
: HD> : For those of you who insist...let's hear the
: > : suggestions of what should replace CW to maintain the current level of
: > : standards for operator comptetence.(Spare me the "...competence??? Have
: > : you listened to 20 meters lately ?... garb. There will always be bad
: > : apples in the bunch.)
: >

: JC> What are your proposals then?

: Of course you couldn't answer this Jim.
: My proposal is to keep CW ! It is still used and it serves it's purpose
: on the test. ANYONE can learn it...young or old.

The ability to learn CW is irrelevant to the issue. You say the
knowledge of the Morse code make a more competent HF operator. All I

simply asked is that you proved your case. You have not done so. Then
you state that if CW discontinued, then it should be replaced by
something else. When I ask you for your proposals, you are unable to do so.

SCRRBA isn't perfect. Neither is anyone else.

>I went back and re-read your old
>posts, and they are chock full of comments to the effect that you know the
>guys in SCRBBA, they are great guys, etc.

I do know many of the guys in SCRRBA. I do think they are great guys... Most
of them want to coordinate using purely technical criteria. Unfortunately,
the political side of the issue keeps getting in the way.

>But maybe you are changing your mind. If true, why not say so?

Nope. I still believe changing coordinators will not solve anything. SCRRBA
could do a better job of communicating, but I still believe they are
effective. The open vs. closed arguement will exist until the end of time.
It's in the same vein as the code vs. no-code arguement.

Does anyone know where I can get a copy of PACTERM for a Radio Shack Model 3 or 4 computer. I recently purchased a Kantronics KPC3 and it came with an IBM PC version of the program. When I wrote Kantronics they said they no longer had the Radio Shack version. Thanks.

Translation: These guys want to have things their own way, but "politics"
i.e. fairness, equity, and just allocation of a public resource, "get in the
way."

Justice has a way of getting in the way of the unjust, doesn't it?

>
>>But maybe you are changing your mind. If true, why not say so?

>Nope. I still believe changing coordinators will not solve anything.
SCRRBA
>could do a better job of communicating, but I still believe they are
>effective. The open vs. closed arguement will exist until the end of time.

No Jim, it won't. When SCRBBA is no longer recognized, which will be soon,
no one will be arguing about it, because there will be enough open
repeaters. No one will care about a few geriatrics who remember what it was
like to own 440. No one remembers the old bunch that used to "own" 2
meters, and the issue is never, ever, discussed with regards to 2 meters.
440 will be no different.

>It's in the same vein as the code vs. no-code arguement.

Nonsense. The two issues have zero points in common and shame on you for
trotting out that old piece of flamebait. Please don't corrupt this thread
with it.

Come on, Jim. Admit it. SCRBBA does a rotten job and ought to be
eradicated. You know it in your heart.

Admit it, Jim. You'll feel better.

If your high prices are caused by 100% markups by the retailers, that
suggests a lack of vigorous competition, which in turn suggests that your
market has been weakened by government strangulation, which I think was
John's point. There is no other reasonable explanation for someone getting
away with that sort of thing.

I am quite sure that we Yanks are as greedy as any other group on the
planet. Our markets don't allow 100% markups, generally, because they are
relatively free and unfettered, at least as compared to some. If someone
tried to charge a 100% markup, he'd soon be eliminated by competition.

I'm not saying that yours aren't free or unfettered, you understand. I'm
merely pointing out that your own post is suggesting this.
>
>
> (Would you dare suggest to Mrs T that she was even slightly
>socialist ? If you want to try, I want to stand at a safe distance,

Margaret T did her best to fight the market lethargy that I'm referring to.
She was probably Britain's most effective leader since Churchill, IMHO.

Please don't take any of my comments negatively, as they are not intended in
that vein.

73 and cheers

>it's just very high-frequency audio :-).

Part 15 deals with unlicensed radiators, and sets limits for unlicensed
radiatons over quite a bit of spectrum, then makes exceptions to the
general limits for things like 160-190KHz, 535KHz to 1705KHz, etc.

The general limits are extremely restrictive.

17M hands down. even now with low sunspot activity.
Actually, I'm suprised that 30M isn't getting more activity.
I've worked some dx on 30M(there's no phone operation, of course)
but I usually don't find anything. Even less on 12M.
But 17 has a lot of activity.

The users/owners of "closed" radios have already gone to an unused band. They did it about 25 years ago. When they gave up on the vast waste land we now call 2 meters FM. 440 was quite then, they only radios available were old used commercial gear. You had to modify, recrystal, tune up, and set the deviation on your own radio. They built great system with links, remote base, and other cool things. But then the other hams who were left behind on 2 meters heard of these great things and started to listen with there bearcat scanner.

They felt slighted because the other guys had cool stuff but they didn't. But alas they were saved, the great big appliance radio manufacture across the Pacific started to make 440 radios. So the hams who could not modify, recrystal, and tune up the own commercial radio could now go to the radio appliance store and be on 440.

But they were told these radios with there vast links and widgets were "CLOSED". How can that be, he thaught, I am a license amateur, I can transmit were I want to. Of course it was very hard to communicated to this newbie on 440, because his deviation was set some were around 15khz. It was really rough copy through our micor rx on the hill. And then we had to explain that putting a "linear" on his radio would not help either.

As I have have stated in the past. I have no problem with reissueing unused pairs, and to iliminate "paper radios". I do have a real problem with all the whining about "closed repeaters". They have just as much right to be there as an open one does. The FCC supports this in writing and by there actions.

Frankly 2 meters and 440 such as they are would have become as popular, if it wasn't for the pioneering types who put up the first 2 meter FM repeaters. It may be an interesting note that most of these pioneers are now forgoten, but they are still around and are found for the most part on 440.

And then we have to hear all the whining about SCRRBA and the fact they don't have any meetings. Whine. And then we hear they did have on less than a year ago. I thinks this pretty much sums it all up. The few anti "Closed/ SCRRBA" types that we hear from, are really interested in whining about the haves because they are have nots. They are are not interested in getting

involved with the system and the people.

Actually NS is VE1 and NB is VE9. This is historical as a believe
that when the VE1 Split happened, NS got to keep VE1 because they had
a larger number of amateurs than either NB or PEI.

Well, according to band descriptions I've seen, 30m is the least impacted
by the Sunspot Cycle, meaning that it is consistently pretty good and shares
some of characteristics of both 40m and 20m. When things are hopping
the band is always open to somewhere. It is a good band for low power and
meager antennas due to the power restrictions (200w). But .. no Phone portion,
(CW/Digital modes only).

You think they have problems in So. Cal., well here in Wis. they just put another traffic signal on my route to work. As I see it I have two alternatives. I can refuse to recognize those red lights and just plow on through, or I can get out my lawn chair and clip board to document the traffic flow at that intersection. The first alternative would seem to be much easier although I may have an occasional debate with another motorist. The second alternative might take some investment of time and effort and I might actually be received as a reasonably intelligent person with pertinent information.

In my opinion Roger, you have the same two alternatives. Briefly, keep us informed of your progress;-)

Roger wants 440 to be just like 2 meters. Full of Bley dup bop bop de
dop, (or some other video game sound) when you un key your radio, open
repeaters. I don't feel that 2 meters in LA is what I would want to use
as my justification to keep a band if it were in jeapordy.

It is the very same issue. The jonny come lately wants all the cool stuff they old guys have with out having to work towards it or earn it. It is not impossible to learn the code (Roger even learned it) nor is it impossible to become a member of a "closed" systems. Whining to the FCC about the code test won't make them send you an extra will it? Whining about "Closed" radios as opposed to getting envolved with a club or group that has a repeater won't help you either.

5378. Attenuators

Source record: 244202

Nothing really important, but I 'm curious and haven't been able to find the answers to these questions regarding attenuators: 1) Is there an advantage to the "pi" configuration over the "T" configuration? Most circuits that I have seen use the "pi". 2) How critical is lead length? Am I correct in assuming that lead length should be kept to a minimum? Or is this only critical at VHF and up?

That's the great thing about this hobby - the way it promotes tolerance
and harmony between different nationalities.

By the way - the reason I run 100W to simple antennas on HF is that that's
the way I like it - except that usually I turn it down a few dB just for
fun.

Try in Ramsey off route 17 at the Don Bosco High School.
I beileve it's either the 2nd or 3rd Saturday of every month.
I can't rember the call sign of the club, but you can call the ARRL
and they can and they will also give the contact name and number.
Nice folks. CW tests are multiple choice not fill in the blank.

the ARRL will send you a computer printed listing of all VE sessions
in the area . They are very helpful.

: have a Motorola pager here that's crystalled up on 147.180 Mhz and someone
: can get on the repeater, punch in a code, and it'll page me. It's legal and
: is done all the time.

With the premature birth of a child lomming, (fortuatly, my wife is at 39 weeks and still cooking), I needed a way to be paged fast. I was told that the local repeater controler would support EIA paging tones.

Since my wife is also a ham, this seemed a good way to get THE message.

Pagers are availble for the 2 meters, but they take about 3-4 weeks to be built. This is mostly due to the crystals needing to be cut. Motorola Minotor pagers can be had (used) crystaled and coded to your specs for about $150 including charger. This model can also be used as a monitor when you are not waiting for pages.

Randomly programed tested used units can be had for about half that, many repair shops have boxes of reeds for the older ones and some have filters, for the newer ones in stock. Usually you can get the reed versions as they are older, by asking.

Most of the cheap ones will have rf boards for 148-164 mHz instead of the more desirable 132-148 mHz boards. Many of the 148 version rf boards can be tuned down to the 147 mHz range and if you need to go lower, the difference is 12 capacitors, so it can be done.

Director pagers which use the same rf board, but do not have a monitor mode, can be had as randmomly programed used models for $35 or 5/$125 with chargers.

Since I needed one sooner, I purchased a Motorola Visar, a 16 channel 5 watt, ht, which is about the size of an alphanumeric pager. It did not need crystals or reeds and since it was in stock on the air in one day. It also has the advantage of an antenna (more sensative, but it gets in the way). I tell people who ask that it's the world's most expensive baby beeper.

The ubiquitous mototorola ht600/radius p200 will support QuickCall II, (motorola's name for paging), but it limits you to only one CTCSS tone.

A Motorola MODEN (paging encoder) can be purchased at hamfests for as low as $40. Programing a moden requires burning special rom chips (8x6 bit), usualy done by motorola themselves. So it is better to buy the moden first and get pagers to match, instead of having to by the chips to match your pagers.

73,

Geoff.

Your translation, not mine.

>Justice has a way of getting in the way of the unjust, doesn't it?

Justice depends greatly upon one's point of view.

>No Jim, it won't. When SCRBBA is no longer recognized, which will be soon,
>no one will be arguing about it, because there will be enough open
>repeaters.

You really think so? What about the throngs of new hams in the future?
Eventually, all the channels will be used and you'll be in exactly the same
situation you have now. There will always be more people who want repeaters
than there are frequencies available. This problem is an eternal one.

>No one remembers the old bunch that used to "own" 2
>meters, and the issue is never, ever, discussed with regards to 2 meters.

That's because everyone already KNOWS there aren't any frequencies available.

>>It's in the same vein as the code vs. no-code arguement.

I expect that the Lynchburg (VA) Amateur Radio Club will
be running 6m and 2m, we have the past two years. (Hit a nice band
opening last year, too.) Listen for K4HEX. We're just a lil'
ol' 2A outfit under a screened porch at an abandoned campground... :)

Isn't there any way you can get on BOTH 17 and 30M? They're my favorite bands! On 30, I've worked from Milwaukee to 4K1F, and 3B8CF (fairly often). The last time I called CQ DX on 17, FO5EM came back to me. I've also worked VQ9TP on 17, and recently worked ES1RX/MM in the Drake Passage on 17. This is all with a barefoot TS-940S on CW with a Cushcraft R7.

73,

Rick WB9GYT

BN> 1 novice, 6 techs, 1 tech plus, 0 general, 1 advanced, 0 extra. but
BN> there were 17 people taking exams. a couple got partial credit. so
BN> 6/17ths of the crowd (what, about 1/3?) walked away with nothing...i
BN> just don't think it's that easy.

Good point. I take back *some* of my prior statements.

BN> (ke4? no change history in the database...you went straight to
BN> advanced? geez, it was some 19 years before i finally bucked down and
BN> got the extra..)

Not quiet. I took the written exams on day 1, came out a codeless
tech, went back for the 5wpm a month later and came out a tech(+), went
back the day before the exams were a year old and got the 13wpm, THEN
came out advanced. I've started to get back into CW, so hopefully in ten
years (speed kills y'know), I'll be at 20wpm.

BN> there's a kid in the area that's been coming to the exams for a few
BN> months now -- has trouble memorizing things that just have to be

5396. Logging Software. Comments?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-20 00:00:00 UTC
From: barnaby@world.std.com
Message-ID: <DAHtFM.5IC@world.std.com>
Source record: 244220

just bought AEA's logging software.
It seemed neat, able to control everythin, etc, but
do you have any experiences with it you'd like to share?
There doesn't seem to be much room for entering comments like:
Rig, antenna, Mailing Address, Long QSL MGR routes, or other
remarks.
Going back and entering in log info appears to be quite a bit of trouble,
you'd think that the date would not keep resetting to current date
during "catchup" mode.

Are there other "gotchas" later on with the other features anyone
can clue me in on?

Any other software you like better?

Thanks
Richard Barnaby AA1IB/6 Long Beach CA

:
:
: What FCC regulation permits one way remote pager control on 2 meters?

If there is one then it would have to be the one that makes it illegal to
have paging functions builtin to HT's and mobile rigs. That would make my
paging function in my Icom IC-32AT illegal to use on the ham bands.

There is no regulation prohibiting it.

5398. Anyone to be on 6m on FD???

:
: Pagers are availble for the 2 meters, but they take about 3-4 weeks to
: be built. This is mostly due to the crystals needing to be cut.
: Motorola Minotor pagers can be had (used) crystaled and coded to your
: specs for about $150 including charger. This model can also be used as
: a monitor when you are not waiting for pages.

We have an ACC RC-850 controller on a local repeater and it supports various paging formats. The Motorola Pageboy II pagers are so cheap that down at Dayton in 94 people were throwing boxes of them away in the dumpster. A friend of mine found one in very good condition and with a drop-in charger for $5. Of course as you mentioned you need to order the xtals and wait for those, but any commercial radio repair person (a whole lot of them are hams) can retune them.

There are other pagers that can be used, so your best bet is to look in the repeater controller manual and see if it supports paging, or ask your club.

Jim Cummings writes:

>In any event, since amateur radio is (or soon will be) the remaining
>service whereby some of the participants will be required to know the
>Morse code, then it is indeed obsolete.

By this definition EME is obsolete, ragchewing is obsolete,
building repeaters that duplicate coverage a dozen times over
is obsolete, Field Day is obsolete, homebrewing is obsolete,
modifying is obsolete, contests are obsolete, ham-fests are
obsolete, this never-ending debate is obsolete...
In fact, according to Jim, everything hams do that no other
service does is obsolete.

I'm honestly beginning to believe that digital modes ``cause brain
damage'' (taken from a recent Gary Coffman post with regard to CW).

73 and live better through obsolescence,
Jeff NH6IL

Because QST serves as a general interest publication and an
ARRL activity bulletin. The ARRL is part of a huge number of
organizations in the US which tie organization membership with
some tangible "service" or product. It is very hard to get
people to join an organization for the general good. People
like to get SOMETHING out of it for themselves.

Next time PBS has a pledge drive ask them why you can't get
the coffee mug (or anything else) without joining.

>to coordinate their frequency pair twentysomething years ago.

This is EXACTLY WHY these radios are on UHF today. People didn't want 2
meters cluttered with remote bases in 1975, so the hams who wanted to build
fancy radios moved to bands where there was more room...only in 1975 that band
was 440 MHz. Then, twenty years later, along comes the Japanese dual band
radio and suddenly everyone wants to "take back 440 from the elitists."

Please stop portraying these repeater operators as the "Bad Guys". They just
want to do their thing and be left alone. What's wrong with that?

Why can't _you guys_ move up to the bands where there's plenty of room and put
on all your open systems? What makes 440 MHz so special?

>but the real problem is apparently from the electric clutch on the
>A/C compressor.

Doug, been there, done that myself! Some guys up on the County Hunters
net several year ago (85-86) passed this on to me, it worked.

Remove the braid from RG-8 or equiv, pass the power cable through the
braid (poke pwr cable out of braid several inches from battery) the braid
should cover the cable from battery to the plug in the back of the rig.
Now, ground the braid under the hood somewhere. GOOD GROUND now!

Should stop most all of auto generated QRN. It has worked on all mine
except an 89 Dodge, got most of it out except for a woodpecker type
interference that was random, never could find that.

>of the paper. A paper this short and incomplete hardly qualifies as a
>term paper.

i never saw the complete original post. From this sample, i think gary
was being lenient to give an F. my lit and writ prof in college would have
just painted the stuff i saw with his handy page-sized red pen and required
it to be done over. ("oh, and you still have to do this week's assignment...")

maybe it's time to remove the CW only restrictions on those subbands on
6m and 2m...at least have similar restrictions as might be found on, say the
non-voice segments of 20 m...

Interesting. This individual freely admits to having his password
available to others...practically encouraging its misuse by doing
nothing to correct the situation.

If K1OIK@ccsnet.com is indeed a teacher, and there are others of his
ilk in the world, it somehow offers an explanation why there seems to
have been breakdown of respect from growing generations.

>I cannot control hams, no one can control the dead.<

The Clear Lake ARC will hold its 8th annual Field Day at Bay Area Park
located on Bay Area Blvd (Clear Lake area of Houston Tx, near NASA).

We will setup at 8am on Sat, with actual FD operations starting at 1pm local
and run through 1pm on Sunday.

EVERYONE is welcome, we will have 5 band HF, 6m, satellite, packet, and more!

This is informal, everyone (even your granmother) is welcome to work field
day!

Pot luck supper Sat nite, bring the family out with something to share with
the others for dinner.

For more information check out the CLARC WWW homepage
http://www.phoenix.net/~biekert/index.html

See you there, email me if you want to volunteer equipment, food, coax, etc

Hey Mike!
All aircraft were FM? Nahhh!

My W2A really does AM! The aircraft band (108-138) is all AM! Never heard of FM Aircraft radios (on that band!) My Kenwood 741 does AM in the same band.

Could you be mistaken?

(There are some very good reasons for AM in aircraft, starting with cost of retro-fit. But this has been hashed over ad-nausium...)

A friend of mine developed these chips and I thought it might be of interest. If so, please e-mail me and I'll forward you more info.

CWID-1..Single 18 pin dip ic. User selectable cw-speed and time out time. CWID-1 produces audio and has a ttl output to key the ptt of your transmitter.

CWIX-1X..Same as above except there is also a ttl keyed output for the Morse code along with the audio output.

CWID-2..Single 18 pin dip ic. User progammable using your pc or serial terminal. The rs232 from your pc or terminal hooks directly to the chip.

CW Clock..Single 18 pin dip ic. This a 24 hr. clock announcing time in Morse code thru user supplied speaker. Time set by entering setup mode.

Why does a group who already has an investment in money and time that has
cool stuff like links etc. have to move. Why don't the new guy use those
bands. I've heard there's more room, and the band has alot of potential.

The only real problem is the paper repeaters. The fact that a repeater is closed is not a problem. When the FCC says it's a problem, then it will be a problem

> People look at 2 meters and see what a good band plan is like, and then
> they compare 440, and conclude that it is remarkably worse.

Actually the band plan is very good for both bands. The "closed" part seems to be a major stumbling block for you.

If you want to talk numbers try this one. How many ATVer's in the LA area. very few I'll bet. 300-500?. Check out how much spectrum they use for a few users. Now I don't want to alienate ATVer's they have just as much right to use frequencies as any open/closed/packett etc. I think your real trouble is with "closed". If your issue was really spectrum effiecency you would not be attacking the "closed" folks first.

When I buy a house I check out the neighborhood. I usually have several neighborhoods to chose from. I investigate my options and make my decision. If I want to be in the big city I get a house that is in an area that is very congested, and there are alot of people per block. If I want to be in a planned/closed community I can find one of those. But I was looking for a house way out in the country were there are few people per square mile.

If I were a new ham it would be prudent to invest some time and effort to determine what band I would like to try. I would notice that 2m is very congested and there are alot of hams per freq. 440 is closed for the most part, but thats the way they planned it. 1.2, 2.4, 900 etc. now there is your country bands, no one around, and it's not crowded.

So if I buy a 440 radio with out checking things out. And I don't like what I discover. Is it the fault of the groups that have been there 25 years?

FAQ: US Automatic Reciprocal Operation in Canada

Q1: I have an FCC-issued amateur license. What do I have to do to
operate an amateur radio station in Canada?

A: A reciprocity treaty, TIAS 2508, provides for US-Canada reciprocal
operation of amateur radio stations. No application, registration, or
fee is required. You are automatically eligible to operate in Canada
if all three of these conditions apply:

1. You have a valid FCC-issued license;
2. You are a US Citizen;
3. You are a resident of the US (if you're not a US resident,
please direct your questions to a Canadian official. As I
understand it, if you become a Canadian resident, your US
license is good for a while, but they expect you to get
a Canadian one eventually).

(GR2.45.1.a, RIC-25 p. 9)

Q2: What privileges do Canadian operators have?

A: Legally, Canada has no separate phone band or other mode
restrictions. Instead, they adhere, on a voluntary basis, to a
bandplan, similar to the way we use 160 meters. (The IARU Region 2
bandplan can be found in Chapter 2 of the ARRL Operating Manual.)
Canadian amateur bands are the same as those in the US up through 1.2
GHz, except they have all of 220-225 MHz, and they only have 430-450
MHz. There are, however, bandwidth limits (-26 db):

160, 80, 40, 20, 17, 15, 12 meters: 6 kHz maximum bandwidth
30 meters: 1 kHz

10 meters: 20 kHz
6, 2 meters: 30 kHz
220: 100 kHz
440, 902: 12 MHz
1.2 GHz and up: none specified

(Schedule II, RIC-25 p. 15)

Q3: What privileges am I allowed while operating in Canada?

A: All foreign amateurs, including those from the US, are assigned
reciprocal privileges according to the Morse Code speed needed to
qualify for their license:

12+ wpm: All "Advanced + 12" privileges
(i.e., *all* Canadian privileges)

[US General, Advanced, Extra Class]

5-11 wpm: All privileges above 30 MHz,
PLUS CW and CW only on all bands below 30 MHz;
limited to Basic privileges [*]

[*] *Canadian* Basic + 5 wpm licensees are allowed
full access above 30 MHz, plus (full) access to
80 and 160, only. However, the above *is* what
the rules say about *foreign* amateurs operating
in Canada.

[US Novice Class, Technician + 5 WPM code]

0-4 wpm: All privileges above 30 MHz, with Advanced privileges

[US Technician without code]

(GR2.45.2,3,4, RIC-25 p. 9)

Q4: What's the difference between Basic and Advanced?

A: Without Advanced Qualification (or equivalent), you may not:

1. posess or install a transmitter or amplifier that isn't
commercially designed and manufatured;
2. posess or install any radio apparatus manufactured specifically
for use as a repeater where input and output are on the same band;
3. install a repeater where input and output are on the same band;
4. set up a club station

(GR2.47, RIC-25 p. 10)

Basic operators are also limited to lower power.

Q5: What are the power limits?

A: An Advanced operator or equivalent can use up to 1000 W dc input,
if power is measured as input to the final stage, *or* an output of

2250 W PEP SSB/750 W carrier power for other modes, if output power is measured.

A Basic operator or equivalent is limited to 250 W input, *or*
560 W PEP SSB/ 190 W carrier power other modes, output.

It is illegal in Canada to posess or install a transmitter or amplifier capable of exceeding your legal maximum power by 3 db.

(GR2.58, RIC- 25 p. 11-12)

Q6: So a General class licensee can transmit phone on 3760 or even 14140 kHz? And a Novice can use a 2 meter repeater?

A: Absolutely.

Q7: But I heard that the FCC won't allow you to exceed your US operating privileges, even in another country.

A: I personally called the FCC and was able to confirm that this is NOT the case. The FCC does not enforce Part 97 in foreign countries. Despite what you may have read, it is perfectly legal to use whatever privileges Canada allows you (see above) while you are operating a station in Canada.

Q8: How do I identify in Canada?

A: If you're operating under your US license, then you use your call "mobile" (if you are) or "portable" (if you're not), *followed by* the appropriate indicator:

Nfld: VO1
Lab: VO2
PEI: VY2
NS: VE1
NB: VE9 (since Dec 1993; prior to this it was part of VE1)
Que: VE2
Ont: VE3 or VA3
Mtba: VE4
Sask: VE5
Alta: VE6
BC: VE7
NWT: VE8
Yukon:VY1

On CW, RTTY, and such you just use a slash, for example, I would use "KG2S/VE2" in Quebec.

The treaty requires you give your location by City and Province/Territory at least once per contact, but the Canadian rules make no mention of this.

While the treaty requires English ID, the Canadian rules allow you to use French, too. A chacun son gout. (However, you are not limited to

English or French during your contacts; you can use any language.)

Of course, if you operate a Canadian station or get a Canadian license yourself, you use that callsign.

(GR2.57.1-3, RIC-25 p. 12)

Q9: What if I'm not from the US?

A: You will have to contact Communications Canada (numbers below) and apply for permission to operate. If your country has a reciprocal agreement with Canada, your privileges (once licensed) will be those outlined in Question 3.

If you, as a US licensee, want a Canadian license, you may be able to get it merely by passing a 26-question rules exam and giving a Canadian address. I know of at least one Advanced-class licensee who has done this with a Delegated Examiner. A Canadian station license carries an annual fee (currently about CDN$24), and license terms end 31 March of each year.

Q10: I'd like to get a copy of the Canadian rules. What do I do? Where do I address questions if I'm in a "gray area"?

A: I highly recommend getting a copy of the rules. They publish a number of circulars called RICs that you can order. They sent me these without charge. You can get them in French, too, of course ("CIR-25", etc.). Most of these are also available at http://www.cam.org/~dino/ric.html.

RIC-25: Rules and Regulations affecting the Amateur Service. 24 pp.

RIC-3: Banned Countries/Reciprocal List/Third Party Traffic List

RIC-66: Addresses and Telephone Numbers of Regional and District Offices

If you want information on exams in Canada, ask for:

RIC-24: Information on the Amateur Operator's Certificate Examinations

RIC-1: Information on the Delegated Examiner system

There are a lot of District offices, so I'm only going to list one in each Province. You can ask them to mail the rules to you, or you could get the address for the office closest to where you'll be visiting and go pick up what you want there.

Really? I guess this "fact" has been pulled from the same bin that
the "50% of all HF comms are Morse code" "fact" was pulled from.

>If conditions get too bad just say SRI OM QRM ES QRN and find someone
>else to talk to. None of us *amateurs* have such time-sensitive high-
>priority traffic to pass that we can't forego a QSO and wait for
>conditions to improve.

Oh, another "fact" from that bin you have. I guess you've done
research that conclusively supports this "fact" that no ham has
ever had a life-or-death emergency where the timely communication
of information was required, but all the same I'd prefer you not
speak for me, OK?

Considering you've flamed people for presenting opinion as fact
in the past, I'm very surprised you're presenting these "facts"
as anything but opinion.

>would guess that your views on this matter would then attract far more
>attention and respect.

Don't be a snotty Morse code bigot. I'm an Extra, I use Morse code
pretty much every time I get on HF, and, for the most part, I agree
with Gary. I haven't asserted that learning Morse code causes brain
damage (like Gary does every now and again), but I have observed that
that the Morse code-forever crowd seems to prefer religious ranting and
snotty name calling to respectful, cerebral discussion. This
might lead one to conclude that learning Morse code does indeed damage
the brain making cerebral discussion impossible, but there are
enough examples of Extras with brains (Phil Karn, Jon Bloom, me, etc.)
that I discount the brain damage theory.

By the way, since I've "gotten through it", do my views warrant
far more attention and respect?

5431. Repeater antennas?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-21 00:00:00 UTC
From: <>
Message-ID: <3sa79n$2e6@uc.msc.edu>
Source record: 244005

While I'm not a real "newbie", I'm new to repeater technology. I am
investigating the purchase of a low-power repeater I saw at a hamfest.
Without going into detail, this would be useful for working an event that
I and some ham friends assist with. The question concerns antenna(s):
this repeater was formerly used with two antennas, but the required
spacing would be prohibitive. I have found that many 2m repeaters run
with one antenna and something called a duplexer, but I have hit a dead
end there. Can someone point me to some reading on this? I need to know
how these things work and what equipment might be required (sounds a bit
like magic at this point).
Thanks - Bruce

i'm headed for south america. where can i find out about operating priveleges in other countries? is there advance paperwork involved? do i just use my u.s. callsign?

maybe there's a www site with a list of countries and restrictions?

specifically, i'm going to french guiana by way of martinique.

My two cents worth is that unless you are into cw you will find that 17 is a great band: ladies and gentlemen inhabit the band, and you can work great dx (in the right sunspot time) and even these days although band openings are a bit sporadic as you might imagine. I have a friend, G4YIT, who has worked more than
1600 counties in the U.S. from England.

I work 17 more than any other band.

: a 10 kilowatt amplifier for the 10 GHz band. He's probably figuring on

!!!!!!!!!!!!!!!!! W H A T ??????????????????????????????

It's either a joke, a typo and/or ignorance...but AFAIK you may have to pay serious bucks (MEGA BUCKS) for an amp at 10 GHz which can deliver 10 kW. Thousands of dollars for 10-100 W.

However, a large parabolic reflector (around 30-40 dBi) and 100 mW (easier to achieve) can result in an ERP of 100 to 1000 W, respectively. If you're lucky to have 1 W at 10 GHz and 40 dBi gain, yes ERP=10 kW.

Keep the RF away from your eyes and reproductive system, at least. One should not stand in front of a beam of RF radiation with an intensity of 1 mW/cm^2 or more. There are certain guidelines for RF exposure vs. frequency and can be obtained from IEEE, ANSI, Military, etc.

I hope this helps,

Luigi, N2CWV

We had a test eqpt store here that was like that: row upon
row of stuff with unrealistically high prices that had sat
there for 10 years. Always wondered what the deal was.
They used to keep the stuff in glass cases to avoid embarrassing
dust buildup on it.

Turns out they were carrying the stuff on their books as being
worth the inflated asking price and getting bank loans against
"inventory". Meanwhile, real equipment was being sold out the
back door for market prices. out the back door. Eventually,
the jig was up, new owners took over and closed the "museum"
section of the store.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 JUNE AND FORECAST FOR 22 JUNE - 24 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 20 Jun
Daily Proton Fluence >1 MeV: 1.4E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.2E+08 (moderate)
X-ray background: B1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Jun 23 Jun 24 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Jun: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 20 Jun
Learmonth 10 2233 3222
Fredericksburg 11 17
Planetary 13 22

Observed Kp for 20 Jun: 3554 3432
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 Jun 10 Quiet to unsettled
23 Jun 7 Quiet
24 Jun 7 Quiet
COMMENT: IPS Geomagnetic Warning 17 was issued on 21 June and is
current for interval 26-30 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
21 Jun normal normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Jun normal normal fair
23 Jun normal normal normal
24 Jun normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
21 Jun 20 near predicted monthly values with spread F during
local night.

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
22 Jun 20 Near predicted monthly values
23 Jun 20 Near predicted monthly values
24 Jun 20 Near predicted monthly values
COMMENT: IPS HF Communications Warning 20 was issued on 21 June and
is current for interval 26-28 June. MUFs at Townsville were near
predicted monthly values with spread F at night. MUFs at Hobart were
about 10% depressed.

****
I official packet bulletin of the United States
S Islands Awards Program and the US Islands ARC D
L c/o John Reisenauer, NL7TB X

****
Rt. 2 Box 2161, Benton City, WA 99320 USA

The United States Islands Awards Program is expanding its role in island management due to the ever increasing popularity of state island collecting. I am pleased to report that US I has formed a new charter club in Alaska, "US I Last Frontier ARC" (call pending), to compliment our lower 48 based "US Islands ARC" (KC7KHU). These are exciting times in the North Country and US I will be there! Details are presently being worked out for our Douglas Island outpost (US I #AK-18S).

Sigma, WB4SRH, wasn't on June 5th because of rig problems but promises to be on soon. Island stations on for Field Day include W4OT from Wabasso Island, Florida (FL-38R) and N4XEO on North Hutchinson Island, Florida (FL-37S).

Be on the lookout for the following NEW ISLANDS that will be on soon:
1. N6IV, KF6XC and NL7TB as "VY1ISL" from an undetermined Yukon island starting around 2000Z June 30th for the Canadian Islands Awards program (try 14.250, 7.250 or 3.950 +-).

2. Same team will activate Alaska's Ushagat Island (Barren Islands group- new IOTA!) starting around 0200Z July 4th for 3 days (same freqs). This is the first major DXpedition for US I!

...new DXpeditions
NL7TB and I will activate Governor's Island from Lake Sakakawea in ND on July 24 and 25. Nearby John's Island may also be a go depending on the level of the lake! We'll use the club call there.

Our 1st Annual W/VE Island Contest promises to be a big
success as we've received a lot of favorable comments so far.
Reserve September 23 and 24 for your ISLAND FUN!!! The US
Island Directory, our complete information package including
rules, awards available and our current islands activated
list, is available for $5.00 US/Canada or $7.00 elsewhere.
Have a fun and safe summer. 73 and 88.

Claire, WL7MY
Secretary, US Islands ARC

Watch for info on the 1st US/Canada Island contest this fall... 73 N0ISL

I'm using it and I love it.

> There doesn't seem to be much room for entering comments like:
> Rig, antenna, Mailing Address, Long QSL MGR routes, or other
> remarks.

I've found the comment area to be more than large enough for anyting I wanted to enter. I'm sure you have found that you can just keep typing and the window scrolls.

> Going back and entering in log info appears to be quite a bit of trouble,
> you'd think that the date would not keep resetting to current date
> during "catchup" mode.

I don't understand this comment. If you're manually entering QSOs then you're right Log Windows displays the current date and time after a QSO is manually entered. It makes the assumption that the next QSO logged will be one off the air. After you get your old QSOs entered you sure want the date and time to be current and not the last date entered in the log.

>
> Are there other "gotchas" later on with the other features anyone
> can clue me in on?

Wait until you see how it credits your old QSO where the prefixes have changed. Log Windows has a great lookup table that has dates so old QSOs that have a different prefix than the one currently assigned to a country are properly credited for DXCC and various other awards.

Hi,

Dont listen to the DL station- 6 meters is very, very cool. Be sure to buy a rig that is all mode. There is a little stateside DX on some of the FM simplex channels, and the repeaters open up when the band is open, but the frequencies near 50.125 USB are alive, and will be for the next couple of months. If you miss the seasonal peak of summer, start getting your station together for next year.

>HF (why is there ANY testing at all ?).
>
If you want the testing to limit access to only competent operators, then
test for operator competence, not something else. Knowledge of morse does
not imply competence at operating a radio and more than being able to read
your owner's manual implys competence at driving your car.

>
>How do you render CW obsolete when it is still widely used on HF (and all
>of the other modes that I mentioned earlier...ya...even in the 90's) ???

Simple. CW is no longer used by anybody except those who use it for
recreational purposes. I include include hams in this as well, since those
that do not wish to use morse for it's own sake simply don't use it, even if
they have already passed the code tests.

>
>What might these modes be that can be demonstrated to be as effectively
>reliable in adverse conditions ? RTTY ? Baudot ? Packet ? ...NOT !!
>I challenge you to receive any digital mode in poor conditions. No
>machine can currently replace the human ear and mind to decode and fill
>in the blanks. Even in extreme signal-to-noise ratio conditions, the
>threshold of a machine would have to be set so sensitive that it would
>be trying to decode blips of noise where a human could still distinguish
>the tones.

The copyability of any modulation method is a function of the rate at which
the information is transferred, amoung other things. If I were to take a 120
characters per second digital system and scale it down to the 1 character
per second speed of 12wpm morse, then it too would be just as copyable as
morse. Alternatively, try sending morse at 1400wpm, and see how copyable it
is, be it by man, machine, or anything else!

>The primary purpose for CW testing is to act as a competence test.

Let me see... all current HF operators have passed through your "competency
test." In that case, the use of CW as a lid filter seems to have failed on
14.318Mhz, as well as in the gab-net vs broadcasting wars on 7M.

>NO...NO... Why does CW have to be "vital" to the hobby ? It is
>certainly a related and useful skill and not "outdated and useless" like
>many of you folks would like everyone else to believe.
>But like I said in the last line, I don't want to ram CW down anyone's
>throat, I just beleive that it still serves its purpose in the test.

Then why do you insist that all operators MUST know how to use a particular modulation method to use those frequencies? It makes no more sense than insisting that all operators know how to use packet before being allowed to operate on VHF. The only reason that morse is in the rules at all is because way back when the rules were first being written, morse was the major modulation method in use, and it made sense to have operators who knew how to use that method of communication. That is no longer the situation, and the rules need to be updated to reflect that. I have no problem with those who wish to use morse, or any other modulation method they may wish. I simply do not see any justification for forcing the use of a particular modulation method.

>Notwithstanding, there are still bad apples on HF but the likelyhood of
>such events could increase if a certain level of competence in the
>testing for HF privs is lowered. Do you not agree ?

Certainly, so why not test for operator competence instead of something totally unrelated?

From: penneys@brahms.udel.edu
Message-ID: <3s8uml$s2n@brahms.udel.edu>
Source record: 244023

On the weekend of June 24-25, radio amateurs celebrate Field Day, far and away the most popular activity of the year. This is an emergency preparedness exercise, contest, picnic, campout, public relations and endurance event rolled into one.

The N.E.R.D.S., a club devoted to contesting and fun, will be operating again at Iron Hill Park in Newark, Delaware. Setup begins Saturday morning, and the contest starts at 2 PM Saturday til 2 PM Sunday.

Iron Hill is located at Route 896 just off Interstate 95 at the Delaware-Maryland border. Exit I-95 at 896 South, go about half mile to first light, Old Baltimore Pike. Make right at light, go another half mile or so, passing Iron Hill Museum on right. Make right turn on Whitaker Road past museum, go up hill. Turn into park at sign and go to end of road. Setup will be in pavilion on right.

The public is urged to join the fun and see why "ham radio" can be so addictive.

For further information, call Bob Penneys, WN3K at Ham Radio Outlet, Delaware, at (800) 644-4476 9:30 to 5:30 Eastern time.

Thanks and see you at Field Day!!

: JC>that many believe this surviving radio myth (rm).

: Sigh! We have been over this over and over again! Sure you may have
: some oddball mode that is so esoteric that no one has heard of it yet,
: but you will still need a lot more complex gear to run that mode.

Ignorance of technology, like the law, is no excuse. Two rather well know examples of digital technology that is superior to CW is Pactor and Clover and others are coming. In addition, the complexity of the gear required is, in reality, not much more than a simple CW rig, modified to shift its carrier as in the Pactor mode. Carling is entitled to mock these assertions made by others and myself, as he has demonstrably done so before, but it none the less does not make it any less true that CW is no longer on its "it will get through when all other modes won't" pedestal or more so demonstrate to the world his ignorance.

: By the way it is not (rm) but nprm (Negative Paranoia Radio Myth)
: - that is the anti-cw version!

Then Carling should undertake to prove the assertions, finding and experiments of others are wrong. Otherwise, he is blowing smoke.

: JC>: Big commercial interests and ham
: JC>: dealers want to get rid of code requirement because more people will
: JC>: get into the hobby and buy their stuff.

: JC>Where is your proof that the assertion is true? Otherwise, it is useless
: JC>speculation bordering on libel.

: It's only "libel" if you mention an individual or company by name Jim!

: Also, it is only libel if it isn't true! If it's true, it isn't libel!
: He might be right that ham radio manufacturers try to steer the FCC
: rule making process through various means. It seems very likely to me.
: Why is that libelous? Bob didn't accuse them of anything illegal or
: immoral did he?

: ---
: • SLMR 2.1a • Is your computer too FAST? Type 'WIN' at the DOS prompt!

The original assertion about manufacturers were focused on the Canadian context. What happens in the FCC with respect to the influence of ham radio equipment manufacturers, I couldn't give a jot. Besides, Canadian libel law is different than Canadian libel law, so what applies here is irrelevant to the US.

If you will be kind enough to re-read my quote, I did not say it was libel, but it bordered on being so. It bordered on libel because it claimed that Canadian government officials who worked on the restructuring of the amateur service were unduly influenced by amateur radio equipment manufacturers. It is not libel, per se, because recently the Canadian Supreme Court stated that a group cannot be liabled, in the original post, Duff did not name names. However, there was no influence by equipment manufacturers whatsoever upon the restructuring of the certification of the amateur service in Canada. In effect, Duff was engaging in that time honoured pastime of blowing hot air. The problem was, he didn't realize that I would call him on his accusation. Notice how clumsily he avoided proving his statement.

My son is going on a 65 mile trek at Philmont Boy Scout Ranch in northern New Mexico (USA) this summer and would like to know if it would be worth the effort to take his 144/440 HT.

Has anyone been on one of those treks at Philmont and could you contact a repeater when you were on the trail?

Gary_Rogers@DGC.ceo.dg.COM wrote:
: Nothing really important, but I 'm curious and haven't been able to
: find the answers to these questions regarding attenuators: 1) Is
: there an advantage to the "pi" configuration over the "T"
: configuration? Most circuits that I have seen use the "pi". 2) How
: critical is lead length? Am I correct in assuming that lead length
: should be kept to a minimum? Or is this only critical at VHF and up?

If your attenuator is in question measure the reflected power from it, other
wise known as return loss
long leads on resistors are inductive. On HF you can get away with murder
as far as lead length goes. On uhf its best to have nearly no leads, especially
on 1.2ghz. Chip resistors are the best in that case. If you are attenuating
more than 10 watts, buy a heatsink mountable attenuator. Those can be had
up to several hundered watts and any attenuation value you need.
Pi attenuators are easyer to make/use because a smaller break needs to be
made on the rf line.

>Admit it, Jim. You'll feel better.

I've made one posting on this entire subject a couple of weeks ago
which I thought might explain some of the background of 440 in So Cal.
For whatever reason it was ignored (don't worry I'm not losing sleep
over that :-)

While I won't go into the entire post, I do need to bring it up again.

Roger,

this is not directed at you personally but many of your comments have
been rather vitriolic about the entire situation.

You have said that you have been licensed since 1967. Yet it
surprises me that you appear to know so little or choose to ignore
some of the reasons of why there are closed repeaters on 440 in So
Cal.

To give you and idea of my ham radio "life" I was actively involved in
ham radio from 1977 till I left So Cal in October of 1990. (I still
get "reports" from my friends :-) I was on 147.435 when it was still
on Mt. Wilson. This was the period when the repeater really started
going downhill. At the same time it was a wonderful time for the
repeater.

I was an active member of the MWRA. I was also an officer of the MWRA. I watched the repeater and the club go through some of it's worst and best moments.

Can you imagine how some of these hams felt watching something they liked be destroyed by what were essentially bad people? Put yourself in their shoes. And the disruption was not done for the good of the repeater or the club. It was done by people who enjoyed making their fellow hams feel bad.

IMHO many of the hams who moved up to 440 decided to create their own "world" that they could control and not have to deal with the inconsiderate (understatement of the year :-) people that had driven them away from 2 meters.

Most of my close friends moved up to 440 because they couldn't take the harrassment and other garbage being dished out. My tolerance level was higher or perhaps I just had a thing for being abused.

I really have to wonder what kind of person you are because you seem to be making IMHO inflamatory statements about the situation. I really wonder what you are like on the air and on which repeaters you hang out on. Yes this is guilt by association but it does apply with bad hams.

You have some valid points about 440 repeater coordination. I just feel you could be more constructive about it.

BN> 6/17ths of the crowd (what, about 1/3?) walked away with nothing...i
BN> just don't think it's that easy.

This doesn't mean much to me without knowing how hard some of these people studied for the tests. We've all heard of people who just walk in after reading the book for a few minutes and squeak through. There must be plenty of others who take the tests just to see what will happen, with only minimal preparation. Do you know how many of the failures were in that category?

After all, if you have the study guides and questions, you can test yourself and know pretty accurately whether you can pass the written tests or not before going along.

5462. What comes after 2m repeaters?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-21 00:00:00 UTC
From: kbnmatt@aol.com
Message-ID: <3s87a4$e00@newsbf02.news.aol.com>
Source record: 244124

I'm a fairly new operator with a Technician license who has been working with a 2m hand-held radio that gets plugged into the car via the cigaret lighter when I go mobile. (I have a 2m antenna attached to the car.) I've worked with repeaters, but so far haven't been able to do more than chat with people in the L.A. area. (I live in Pasadena, and have tried to reach the Catalina repeater several times without much luck.) I'm wondering what the next step is for me: do I -
-- buy a dual-band HT and get into satellite transmissions?
-- upgrade my license and get into HF?
-- buy a 6m HT and get into that band?
-- buy an all-band VHF rig and try other modes of transmission?

As finances are an issue, I can't see myself doing more than one of these for the next several months. I'd be interested in hearing the experiences that others have with each or all of these, as then I'd have an idea of what each is like. Also, does anyone have any ideas on doing any of the others for less money? I live in an apartment, where both large antennas and intense home-brewing are out of the question (no work space or fancy equipment....), and am new enough that I'm nervous about the idea of buying used equipment. What should I look out for, etc., etc.?

Thanks for reading this entire long-winded message.

I really doubt that your ham stores are making a killing. If they were, others would be opening up quickly as that is what usually happens. Running a business is very expensive. The overhead is monstrous just to open the door, before you buy anything to sell. I've heard from Gs that your telephone costs are much higher than ours so maybe that's part of the difference, etc. No, I doubt that the ham store dealers in London are driving jags or bentleys. Hmmmmmmm?

The very large antenna systems you see on I-75 belong to the Voice of
America. Their 12 megawatts ERP is well known in the area. Rest assured
that your tax dollars are at work as a local source of free illumination
from fluorescent lamps!

Frankly, I don't care for the way you characterize the 2 meter folks in LA,
who happen to be most of the hams in LA. Surely it is possible to discuss
coordination without insulting 40,000 or so hams.

Especially since the vast majority of 2m repeaters in LA are well-run, open,
and characterized by courteous operating.

As I have repeatedly pointed out, Jim, on 2 meters no one complains because there is a general perception, which I personally believe to be correct, that the band is fairly coordinated. Consequently, the orientation is towards living with the limits, rather than complaining. On 440 there is complaining because the administration is perceived as unjust.

>their fellow hams feel bad.

Yes, the MW situation was unfortunate. I don't know much about it, because
I stay away from "crud magnet" repeaters which, regretably, and for reasons
I'm unclear on, is what happened up there.

For those who are unaware, the Mt Wilson machine got so bad that there was
even an article in the LA Times about it.

>
>IMHO many of the hams who moved up to 440 decided to create their own
>"world" that they could control and not have to deal with the
>inconsiderate (understatement of the year :-) people that had driven
>them away from 2 meters.

Sorry, Marc, but I don't think that's true. Most 2M machines are wildly
different than the Mt.Wilson machine. As you doubtless know, the .435
machine pretty much is where all the bad ops, not counting the odd jammer,
hang out around here.

>
>I really have to wonder what kind of person you are because you seem
>to be making IMHO inflamatory statements about the situation. I
>really wonder what you are like on the air and on which repeaters you
>hang out on. Yes this is guilt by association but it does apply
>with bad hams.

I really wonder what kind of person **you** are. The above paragraph, sent by you, makes smarmy, slimy insinuations about me, a person you don't even know. We've never worked on the air, and you have no idea about these things. You have not heard me make any comments not confined to the issue of this thread. You, on the other hand, seem to feel free to make insulting, unsubstantiated personal comments and insinuations of a general nature.

Something of the pot calling the kettle black, I would say.

I'd appreciate it if you'd confine your impolite and vitrolic comments at least to the issues, rather than getting personal about it. You are setting a low standard yourself, and are in no position to issue high and mighty lectures to anyone else.

>
>You have some valid points about 440 repeater coordination. I just

From: "Douglas J. Seyler" <epcodjs@sugarland.unocal.com>
Message-ID: <3s97q7$k74@unogate.unocal.com>
Source record: 244147

Having just installed my first mobile HF rig in a car (a Honda Prelude) I am discovering the variety of QRN sources in a car.The ignition noise is pretty minimal (although I would like to reduce it), but the real problem is apparently from the electric clutch on the A/C compressor. Living in Houston, this IS a problem now that summer is here.

Can anyone suggest a cure for, or point me to a good reference on, fixing this sort of electrical noise in modern cars? The ARRL handbook is pretty vague about this.

Thanks es 73,

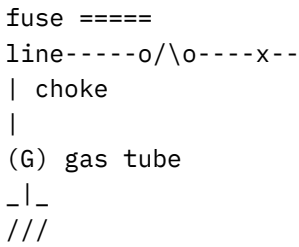
>fixture? Once upon a thread ago I thought there was a mention of using the
>lightning device commonly used on water well pumps. Is that how they work?

You can, and you do, use suppression devices. The proper suppression
device for the safety lead and neutral, however, are a hard mechanical
and electrical bond to the ground window, similar to the way a coax
shield is treated. Only the hot wire(s) (I use the plural because you
may be running in a 220 VAC line to the shack) need a more sophisticated
treatment.

The units used on water well pumps are silicon carbide based. They tend
to fail explosively open. Since they are in shunt from power to ground,
when they fail you are left with no protection from subsequent bolts.
The old wives tale that lightning never strikes twice in the same spot
is just myth. Lightning often strikes the same spot again and again.
While the well pump protectors are cheap and can clip multiple induced
spikes without harm, when a real bolt strikes they blow (still offering
protection from *that* bolt in the process via the plasma created), and
then you are left with no protection, and no indication that you have no
protection unless you are alert. (MOVs behave similarly.)

I've used them for non-critical installations because they are cheap
and effective for one shot, but I recomend you use a gas discharge unit
in shunt behind a series line fuse for situations where you expect
multiple strikes in the same storm, or in locations that are unmanned
for part of the day. When a gas tube fails, it fails shorted, that
will blow the fuse, which opens the line and offers the equipment
protection, and forces you to service the unit before bringing
it back online with your equipment.

The way to install these units is like this;



The choke is important because it allows the voltage to reach
firing potential on the gas tube before the voltage can rise
much in the equipment. If your equipment impedance is low enough,
without the choke, damaging currents can flow before the firing
potential of the gas tube is reached. 100 uH is usually large enough,
its reactance has to be low at AC frequencies, but relatively
high for the RF of the lightning bolt. Polyphaser sells such gas
discharge units for power protection already built this way,
as do some others.

Note: a series reactance is important in a coax protector too.
You don't want DC continuity through the coax protector inner.
There should be a capacitor in the position of the choke shown
above for coax protectors. It should be the proper size to have
minimal impedance at operating frequency, but higher impedance
at the lower frequencies where most of the energy in a lightning
bolt is concentrated, IE below 2 MHz. Polyphaser coax protectors
are built this way. This is vital when there's a cavity in the line,
otherwise the short presented by the cavity input loop (at low
frequencies) will allow large currents to flow without ever allowing
the firing potential of the gas tube to be reached. Even in cases
where no cavity is present, a 50 ohm impedance for the radio equipment
can prevent the gas tube from striking if this reactance isn't present,
and you'll get no protection from the current surge.

I hate to sound like a Polyphaser commercial, but they're what I
generally use and recomend. I've no connection with them other than
as a satisfied and frequent customer. Unlike some other highly
advertised protectors, the Poly stuff works as claimed *when installed
properly*.

Note that I emphasized proper installation. No protector will do
you any good if you don't install it properly for the particular
facility you are trying to protect. That gets us back to issues
of single points, ground windows, effective Earth terminals, etc.

Gary

That's right Jim. But, hey, Jim, that's practically **all** the hams in Southern Cal. Let me put it to you another way. On 2M we have a situation which probably 99.9% of the amateurs (both repeater trustees, and your average joes) feel is well-run, and just. On 440 we have a situation where almost everyone here (all but a few scores of trustees) feel is poorly administered, capricious, and unjust. Doesn't that suggest to you that there is a problem? That's all I'm claiming. People look at 2 meters and see what a good band plan is like, and then they compare 440, and conclude that it is remarkably worse. Unsatisfactory in fact. Doesn't that suggest to you that fundemental change is in order?

Which is my only claim.

Well, one other one. The stories about how SCRBBA is impossible to deal with, closed to most outsiders, and not interested in change are sufficiently well-documented and purvasive that I personally believe that working with them is not going to lead to a solution, and would be a waste of time. Just my opinion, although as you have seen on this thread, it is shared by others.

Hi All,

Don't forget the VHF National Field Day over the weekend of July 1st
and 2nd. The CAA Test & Measurement Centre Amateur Radio Club will be
operational from Rugby, UK - IO92JH - on 2m and 70cm using the
callsign G4CAA. We look forward to working you.

Regards ... Mike

Could someone post some information concerning microwave transmissions... There is a posting from someone in alt.radio.scanner that was looking for a 10 kilowatt amplifier for the 10 GHz band. He's probably figuring on jamming the X or K band of some cops' radar units, although that's only MY guess. My question is this: Since this particular band is a microwave band, and microwaves are a dangerous RF energy source, aren't HAMs even limited as to how much power they can use on microwave bands?

Please post any comments on this since I posted this fella' back stating my proposed concern of being burnt by 10 kilowatts aimed my way on the highway whilst some dummy tries to jam a radar gun.

> :-)) than in rational discourse.

You used the word whine more in one day than I did. "Hurling insults" It seems that if somone disagrees with you they are hurling insults. ref:WA6HBR Personally I find you attitude.

Just a couple of questions though.

1. Are you involved with any club or group that sponsor or operates a repeater. If yes, what level is involvement.

I you are then what you have to say has more relivance. But as a casual user of repeaters I don't feel that you have a firm grasp on what it takes to coordinate,build,fix,fix,fix a repeater.

Dave, N7DJZ

2m evolved into what it is now because of repeater wars, coordination wars
and others just giving up and moving to 440. It seems "fairly" in your
dictionary means "mostly open". which is OK for 2m. I would bet that there
are unhappy people who feel the have a bone to pick with TASMA. And that
they were treated unfairly for what ever reason. Even Stamp collecting
clubs have unhappy members.

5498. Re: Low-pass filters for 6M?

Rick Kissell (fedpress@omnifest.uwm.edu) wrote:
: Does anyone make low-pass filters that cut off at or above 54 MHz?

: TNX ES 73,

: Rick WB9GYT

I've seen pictures of commercial filters in some 6m books. Man would I like to have one too! I live in an area that has KTVU Channel 2...and I'm in a fringe area where lots of folks want to receive it so 6m tends to really take a toll on the older TVs that don't handle my nearby radiation well.

I'm working on getting my 6m shack as RF cleaned up as possible...but the low pass filter seems to be etherware. One of my local gurus, quite RF knowledgeable, explains that having such a tight cut off is really expecting a *LOT* from a filter.

My gurus suggestions for minimizing TVI include:

o Shielding the coax leading to my vertical antenna. He suggested Radio Shack masting...or anything ferrous (something a magnet would stick to). I'm planning on using armored cable, a hardware/electrical item. This should not be grounded but should be allowed to "float".

o Run the antenna coax down to the ground rod, attach the shield to the ground rod, then run the coax to the radio. This is to ensure that if the coax is radiating that it should find a good ground and minimize the RF coming in on the coax shield.

Another suggestion that I heard and haven't tried yet:

o Take a piece of 300 ohm twin lead or coax and cut it to the _electrical_ resonance length (using the wire's velocity factor) and putting that on the problematic TV antenna terminals. This is supposed to create an electrical short at the intended frequency thus creating a notch filter. Sounds a little like hocus-pocus if you ask me, but worth a shot.

Well, first of all, privacy is a moot point on amateur radio. If you want even the rudiments of privacy, you need to go to cellular phone or encrypted commercial trunked radio systems. Both those options sound better for your application anyway.

However, if you are willing to discuss only subjects appropriate to amateur radio, you're still in an uncomfortable position at that range span.

Unless you are running unusually powerful stations, groundwave isn't going to be viable out to 50 miles. It's going to die out after less than 20 miles on average. If you had LOS, of course, then any band would work, including VHF simplex. 50 miles is an awkward in between distance for reliable daytime simplex operation when out of line of sight, too far for groundwave, yet too close for normal skywave. Backscatter or NVIS are your only options.

During the middle of the day, D layer absorption is going to kill 75 meters as an option, and single skywave hops are too long for good backscatter on the higher bands unless the target zone of the first hop is *very* rough. NVIS is an option, but since the MUF isn't that high during this part of the sunspot cycle, NVIS isn't going to be workable

for 10 meters, nor likely for any band above 40 meters. 40 may
work, but signals will still be weak and variable over that
range at normal power levels.

If there isn't reliable amateur repeater coverage
of the territory, I expect your best bet is going
to be to go to a commercial service provider. Seeing
as how you want privacy, that's probably the only
sensible option anyway.

Perhaps you could *try* to rent a clue, since you so obviously don't
have one. I was a net control operator for traffic nets 25 years ago,
and had personal QTCs of 25 or better most nights (Vietnam serviceman

messages primarily). I certainly am aware of what it takes to operate manual Morse (and am very aware of its major limitations too). And code speed demonstrations don't measure that. In fact, code speed demonstrations measure essentially nothing of value, which is a major reason that they should be discontinued. They are just hazing plain and simple.

>Oh, BTW, you can fail morse and still pass the exam. It's called
>no-code/Tech.

Moron, we are discussing HF access, not VHF+. At least *try* to stick to the topic. I know it must strain your tiny code damaged wetware, but do try.

>*can* tune to low SWR while pressing mic PTT switch, but then forward
>power goes no higher than .5W or so.

I assume you are whistling into the mike while doing this. There should
be *no* power indication from just keying the mike in SSB mode. If there
is, then your radio is broken, see below for some possibilities.

>I have been given a suggestion that the RF ground should be checked.
>I have tied the rig and tuner grounds together and thence to a 8' copper
>rod about 14 ft from rig. The ground lead is a length of coax (about
>20' with a few loops in it) with a capacitor across shield and center
>lead at both ends.

With a balanced feed antenna, whether you have an Earth connection
or not should be irrelevant. Don't waste your time futzing around
with Earth connections. If you've got a balance problem (you probably
don't), solve that. Don't try to bandaid it with an Earth connection
that will probably be ineffective anyway.

>Questions:
>
>1) What does the LOCK switch *really* do on the TenTec 509?

Same thing as holding the CW key down, it gives you a constant
carrier for tuning up.

>2) Do I have a real problem, or are the "symptoms" merely artifacts of
>the particular rig configuration?
>
>3) What suggestions do you all have for debugging this situation, or
>is it hopeless given the rig configuration?

The first thing I'd suggest is try to tune up directly into a dummy load,
and see how the VSWR meter in the rig reads when you try SSB into the
dummy on the problem bands. The Argonaut is famous for intermittant/high

resistance connections due to the solder tail Molex connectors used. You most likely have a band switch or filter module connection problem on the 20 meter position. If the problem remains into the dummy, then exercise all the Molex plugs and clean the band switch. That'll probably fix it (temporarily).

If the problem isn't there into the dummy, then I'd take a hard look at the MFJ tuner. Again, I'd be looking for bad connections at certain settings that correspond to your problem area. I'd also examine the tuner closely to make sure there's been no arcing inside at the higher PEP of SSB operation. In some cases, I've seen MFJ tuners that had the coil off center enough in the box that they'd arc under high VSWR even at low power. I've seen the variable capacitors do the same thing. If you don't see anything, try operating again into the antenna, but with the tuner cover off. You should be able to see any arcing occurring on voice peaks when you speak into the microphone in SSB mode.

Snip
>2. Regarding your suggestion that CW is not relevant in the 90's,
> what do you suggest should replace it to uphold the required amount
> of testing that should be maintained to yield competent operators ?

Just because someone can send and receive code does not make them
"competent" in any sense other than the stupid, inane and outdated
rules.

>3. Your silly analogies of Doctors and rags or cars and buggy whips are
> totally out of context. Contrary to the "CW is outdated and old
> fashioned" rumours, CW is STILL very useful (and used) in many
>facets of the hobby.

But that's only because its required. Hell, I can do CW with my PC.
Why should I learn it? Criminy, should I also learn the full ASCII char set
in both hex and binary?

Snip
>My 'other problem' is that I had to EARN the HF privledge and feel that
>what is being asked in testing (including CW) is not too much to ask for
>the privledges given.

Aha!!!! Now we're getting to the bottom of it! So just because my
forebears in the software world had to learn to code in machine language,
I should too, eh? Should I have to learn to shoe horses before I get my
driver's license?

The code sux. It's great that you like it. There's a place for it, and bands
should be reserved for it. But dammit, all the code does for me is
preclude me from advancing. I understand the digital modes and I can
"contribute to the hobby". But I shan't because of the code. I shall
remain a codeless tech until they do away with the code requirements.
I'll bet I could probably pass most of the higher level ticket tests without
studying. But then there's that code. Screw it.

The code will go the way of requiring new drivers taking the test to show
hand signals.

1 People around here don't know who Bonnie is, and would not give a f*ck
either.

2 Last year, late spring if memory serves me right, someone mentioned that
they hadn't seen and obnoxious statements from you. I surmized that
maybe we got lucky and you computer burnt up. I got a priveat response
from the moderator stating you were on "vacation". I asked him if this
was a forced vacation at his insistance, and he said yes. Sounds like
you were insulated to me.

3 If I haven't deleted it, I may just have one of your QSL graphics in my
archive.

> Oh shut up Steve, you ham wannabe that never could pass an exam my 8 year old
> daughter passed.

But Burt, if, as you say, "Hams Are Boring!", have no social life,
can't appreciate romantic movies, and lost whatever other asthetic or moral
values you may come up with, then why should I become one?

Personally, since I live in the inner city, I can't see being a ham without
good HF TX or RX capabilities. It's not worth the bother of trying to find
an open repeater, getting billed for its use or membership once I do get on
there, and having to put up with CB brained jammers inserting four letter
words over me.

I never took any of the test elements because I don't want to be a ham
unless I can be a real ham and not just someone with a license to use an
HT, if the lids would let me in to use the HT.

> > < ^^^

> And master of doughnuts and passing gas

Falsafying a signature is a violation of netiquette, but when it comes to the Usenet, YOU are the lid.

P.S. I am not a cop, I don't eat doughnuts. What is your address? I want to come over and sit my 260 lb. butt on your face an hour after eating beans and franks, or maybe broiled fish.

Having put up with him on RIME BBS's in this area, it sure sounds like him.
I think Brian Carling can verify this too, but he hasn't been on that net
as long as I have.

> b) from Burt Fisher who is not really a teacher?

Not to tell tales I don't remember, but the original moderator of the RIME
Ham Conference, (now deceased), a personal friend of Burt, once told a
story about an anonymous teacher. He did it over a series posts spaning a
couple of days. Burt was on there from day one ordering him to stop
because he claimed it was about him. Needless to say, if the moderator
knew the story and Mr. Fisher that well, I'd believe he was a teacher.

|>

Well, there is one thing about Tucker - they are arrogant, they have a good selection, and they charge way too much for their used equipment. However, their attitude is and has always been "If you don't buy it at this price SOMEBODY will". Jim Tucker has very deep pockets (VERY DEEP) and can afford to have merchandise sitting on the shelf, especially when he's paid next to nothing for it.

Their Ham Radio business is still their secondary business. His primary business is Test Equipment rental and sales. He is VERY expensive, but he has a huge inventory, so poeple come to him when they can't get what they want anywhere else, and he knows it.

As for the trade-in value, I've heard horror stories, yet I've got several ham radio buddies who have received high trade-ins for their ham gear.

Bottom line --- there are two large ham stores within 5 miles of my home. I go to Texas Towers whenever I need something because I can't stand dealing with the arrogant staff at Tucker's. HOWEVER, I have and will continue to purchase some things from Tucker because they have a huge inventory, and on connectors, cables and such, he has good prices.

Believe me, I have no doubt you think there's a problem! :)

>People look at 2 meters and
>see what a good band plan is like, and then they compare 440, and conclude
>that it is remarkably worse.

Worse for who? In my travels to California, UHF has been a pleasant place to operate. The radios generally work well, and the converstation is interesting. I've met very interesting people on UHF in California, some of which have become good friends. By comparison, listening on 2 meters was unbelievable! I heard stuff I thought I'd never hear on ham radio...it made CB look tame.

>Unsatisfactory in fact. Doesn't that suggest to you that fundemental change
>is in order?

..Not if the objective is to turn UHF into the cesspool that is 2 meters. I'm sorry, but I have a different opinion. I do not consider closed repeaters undesirable. Some of the most fun operating I've done has been on closed systems. I did not find it difficult to join the groups who operate the closed systems I've used, nor did I find any shortage of places to talk. I guess my experience was different from yours and some others on the net.

>Well, one other one. The stories about how SCRBBA is impossible to deal
>with, closed to most outsiders, and not interested in change are

To all Hams available for FIELD DAY CONTACT,
Our club, Fox River Radio League, is operating this year in class 7A.
We are desperately trying to break into 5 digits for our score.

We are running under W9CEQ for our upper grade license transmitters
and KB9FCC (Great call!) for our Novice/Tech Transmitter. Please tune
around and try and locate us. We had a very active contesting club but
want to make this year our best. Especially with the help of a full time
operating Novice/Tech area our score should be great.
Thanks and 73 in advance,
Mike KB9KFE

Guys...listen up: "The FCC" *doesn't care*! The people that work for the FCC are more worried about their own jobs than whether or not hams use their autopatches too much, listen to music on hold, make one-way paging transmissions or use one of the "seven words" on the air. Do any of you really believe that there's someone in the monitoring station in backwoods Maine with a stopwatch checking to see if you ID every 10 minutes? For God's sake, guys, they're trying to make sure nobody's interfering with radio navigation and public safety radio systems. Then they're trying to figure out whether Rupert Murdoch can buy another 50 UHF stations. Ham radio is something the FCC has very little time to worry about. All they ask is that we act like adults and use a little common sense when we play with our toys.

What is it with hams that they have to nit-pick all of part 97 to death? Can't we just play with the radios? I suspect the IDer on my repeater is transmitting the ID faster than it's supposed to, and I don't think every repeater trustee has a control op monitoring his repeater 24 hours a day. It just doesn't matter that much. As long as we're putting out clean signals, not interfering and not trying to compete with the common carriers (let's face it...a couple of autopatch calls aint gonna put a dent in Cell-One's purse), "the FCC" has bigger fish to fry.

Of course, whenever some ham with no life goes to the FCC to whine about someone else monopolizing "his" frequency, or writes a letter to the FCC asking them to decide once and for all whether paging and other one-way transmissions are legal or not, they force the issue. Now, "the FCC" has to write a letter back. And you can bet we aren't going to like what it says.

So, my advice is to go ahead and page your friends. Try not to annoy anyone else while you're doing it (so don't step on a repeater QSO when you blast out those paging tones) and nobody from the FCC will hassle you. If you do happen to get a nasty note from "Uncle Charlie", write a polite reply back, saying you won't do it again, and I bet you they will consider the case closed.

(Yes, I realize this posting won't have any effect at all on the noise level in this group. Can't we move the rules interpretation questions to rec.radio.amateur.policy, please?)

73,
Peter

Ah, well, a fool's errand, but lets go through snippets of the paper and
point out some of the problems.

> Amateur radio has interested me since a friend of mine got their
^^^^^^^^ ^^^^^
Grammatical error, disagreement of number.

>technicians license. He started telling me about the various licenses
^^^^^^^^^^^
Punctuation, improper possessive form.

>and what you can do with ham radio. I went with him when he took his
>morse code test. I later decided that I wanted to get my license also. I
^^
Awkward and redundant construction.

> Here is a little history behind amateur radio. Wireless
>telegraph was the beginning of amateur radio. This was developed by a
>man named Guglielmo. In 1901 he demonstrated this two way wireless
^^^^^^^^^^^^^^^^ ^^^^^^^
I hardly think the student is on a first name basis with Mr. Marconi.

>telegraph be receiving a signal in Newfoundland that was sent from
>England. ^^

"by" is misspelled as "be".

Marconi's feat was reception only, not two way communications. That
came quite a bit later.

>This was the beginning of amateur radio.

This ignores famous amateurs who preceded Marconi (Hertz, Tesla, Stubblefield, etc), and has the cart before the horse in any event. Marconi capitalized on the work of amateurs before him in his demonstration station. He provided little original work toward the problem. Marconi's experiment heralded the beginnings of *commercial* wireless, not amateur radio. That was Marconi's real contribution, commercializing wireless.

>Early hams assembled
>their own equipment using household items such as milk bottles wrapped
>in foil as capacitors and small pieces of coal for a crystal detector.

While coal was used, galena was far more popular (and effective).

>Amateur radio became extremely popular. Many people had them in their
>houses. Later on in time about the time of world war one tube type ham
^^
Awkward and redundant construction.

> Later on in time when semiconductors came into use the
^^^^^^^^^^^^^^^^^
Redundant.

>equipment became all solid-state. This means that there were no vacuum
>tubes in the equipment. This had many advantages over the older vacuum
>tube equipment. It required much less power to run, the price of the
>equipment went down, and the equipments reliability was greatly
>improved. ^^^^^^^^^^

Improper possessive.

And wow, quite a jump here from early WWI tubes (no mention of Fleming, DeForrest, etc) to post-WWII semiconductors. Almost all of the major developments of radio are totally missed. There's no mention of the step from spark to CW, or Armstrong's FM, or the step from AM to SSB. Lack of research apparent.

[Three huge run-on paragraphs deleted.]

> Another license is the technicians class license. This is the
^^^^^^^^^^^^

This kid has obviously never been taught capitalization of proper nouns, or the use of the apostrophe.

>other entry level license. To get it you must pass the thirty question
>Novice written exam and an additional twenty-five question written exam.

>50MHz except the 50-50.1 and 144-144.1MHz ranges. These frequencies are
^^

Incorrect. Techs have full access to all amateur frequencies above
30 MHz, including the only two Morse exclusive band segments in all
of amateur radio.

>frequencies reserved only for extra class operators. In the past you
>may have had to drive 50 or more miles to a test site. But now there are
>examining teams organized by a V.E.C.. Which administer the exams. This
^^^^^^ ^^^^^^^^^^
Punctuation error, VEC is an acronym. Should be administers.

> There are a few types of signals. One is called a ground wave.
>This signal follows the ground over hills and stuff but finally fades
>off. Another is called direct wave, this signal travels in a straight
>line and is stopped by hills, and ends at the horizon line. But with
>this kind of signal you can bounce the signal off the moon and stuff
>like that. Another type is called a sky wave this type uses the layer
>of the atmosphere called the ionosphere which bends or refracts the
>signal back down to earth. With this type you can skip it along.

I left this final paragraph intact just to illustrate the inappropriate
use of informal language construction in a formal paper. This is the end
of the paper as you posted it. There is no summation. It just dribbles
off with no apparent coherent destination in mind.

Now that I know this was the work of an 11th grader, I'd downgrade
the mark to a pure F just for the grammar, punctuation, and spelling
errors, never mind the errors of fact or omission, or the poor structure
of the paper. A paper this short and incomplete hardly qualifies as a
term paper.

If you would spend only 10% of the time you bitch about code in listening
to tapes or PC generated stuff, you could get through it, Gary. And I
would guess that your views on this matter would then attract far more
attention and respect.

A friend of mine is looking for a card like the one DRSI used to sell and
labeled PC*Packet Adapter Type 2. It's a dual-port packet radio system
that goes into a PC. Type 2 has 2 1200 baud ports for completely
independent dual port VHF/UHF operation.
Since DRSI doesn't produce that card, does anyone know about a
manufacturer that would be able to supply a replacement to that card?

Please answer directly to F5JTL@unm.edu

Thanks

>error rates).

So, who are you going to communicate with, Shawn? Right now (and for a looooong time to come), every HF-licensed ham worldwide has a CW-capable transceiver sitting at his fingertips. By shunning CW and going for a more exotic mode you've greatly narrowed your chances of even finding someone to communicate with. You're placing more importance upon the hardware than communicating.

> So you say what about drop outs. Well by changing the packet size,
>and adding time diversity, drop outs become a non issue for digital modes.
>At best a CW operator can guess at the missed modulation. By adding coding
>the digital mode can actually receive a perceived gain in the signal to
>noise ratio, since the bit error will go down.

If conditions get too bad just say SRI OM QRM ES QRN and find someone else to talk to. None of us *amateurs* have such time-sensitive high-priority traffic to pass that we can't forego a QSO and wait for conditions to improve. Don't become like Digital-Jim and pretend you're a military or commercial operator with Flash-precedence traffic to pass.

> The human ear is not an optimal receiver.

No one said it was. It boils down to getting more satisfaction using our given senses rather than depending upon hardware. Why have a machine do something that you're perfectly capable of doing?

> For further reading on the subject of why CW is obsolete, look at

Obsolete with regard to what? I see you're problem, Shawn. You spend your time reading about `obsolescence' rather than getting on the air and having some fun.

You remind me of a weather forecast office with no windows insisting that it's raining outside when in fact it's a nice sunny day.

Hi,

I am the author of HAM LOG 3 - the IBM computer program for
amateurs to log their contacts. In its fifth year of
development, Ham Log has been acclaimed world-wide.

It is a professional program that has a enormous facilities and
functions, yet very simple to use. From the last review in The
Canadian Amateur magazine:

"This is the first computer program I have in years that I
really cannot find anything to improve on. With so many
features, it is beyond this reviewer's ability to do it full
justice. I rank it [Ham Log] as one of the 'breakthroughs'
in computer technology applied to t his fine hobby, ranking
with Baycom, JVFax and Hamcom."

In Amateur Radio Action (Dec. '94), the editor Len Shaw wrote:

"... the opinion of many, myself included, Ham Log is
already the best such product on the market. In my position
as editor, I get to see and use most logging programs at
some time or other and from my first encounter with Ham Log,
I have believed it to be the best available - and that
includes some quite expensive American programs."

I am wondering if you would like a copy of the functional
demonstration version of HAM LOG 3.1? There are two
files: ham_log3.zip (about 290k) and ham_log3.txt.

I'm certain you will be impressed with THE Ham Log v.3.1

Kind regards,

Robin Gandevia

>
>Most of my close friends moved up to 440 because they couldn't take
>the harrassment and other garbage being dished out. My tolerance
>level was higher or perhaps I just had a thing for being abused.

Since you say you're no longer in the state, I wonder why you have to attack Roger's ``pedigree'' as a ham. He didn't get his opinion by occasional reports of his friends, but by concerted listening to the 440 MHZ band. And he is rightfully angered by comparing what he sees in the Repeater Handbook versus what he DOESN'T hear on the band.

Perhaps you are right: your friends moved to 440 when they were ``driven away'' from 2 meters. Roger's point is that they've seemingly lost interest in actually using the frequencies the coordinators have given them exclusive rights to camp their now-unused repeaters on -- a rignt which seemingly extends to the end of time, regardless of whether or not they are making ANY use at all of the frequency.

Meanwhile, tens of thousands of ham have 440 gear and wonder why there are few open and even fewer active repeaters on the band for their use.

What we're saying is that nobody has the exclusive right to a frequency with no time limit, especially when the frequency languishes for decades and could be of immense value to an area which probably has the largest concentration of hams in the entire U.S.

The other point is that specialty systems with autopatch control and HF links designed for the use of the few should move to the bands where there's more room -- 1.2 ghz, 900 MHZ, 2.4 ghz, etc. The 440 band has too much potential for widespread, basic repeater communication among the majority of the region's hams to be reserved for those lucky enough to coordinate their frequency pair twentysomething years ago.

: their book, or if they already have it typed up, email it to me.
: I will pay $1 for the xeroxed pages. If you can help please email me at

Jerry, there is a thin book for about $4 at HRO - I think there's a store in
Van Nuys - that specifically covers repeaters in SoCal. All bands are
covered, from 10 meters up through 1.2 GHz.

Peter, ours is the only radio service designated `self-policing'. We obey the rules not out of fear of getting caught, but rather out of respect for each other and the regulations themselves. Your signature on your license certifies that you've read and understood Part 97 and are promising to abide by said rules. Someone who advocates that we break the rules only because there's no chance of getting caught shows that their signature and promise are worthless.

>What is it with hams that they have to nit-pick all of part 97 to death?

Think of Part 97 as are our Bible. Every ham activity we partake in we do so with 97 residing in the back of our minds. It's our standard of of measure.

Breaking the law just because the FCC is not listening is like the child who becomes mischievous whenever his parents turn their back. We don't need nor desire such people on the ham bands.

>20' with a few loops in it) with a capacitor across shield and center
>lead at both ends.

Dave, the problem you've described is just odd enough to make me suspect RF feedback. This may be the result of antenna/feedline imbalance, and if so, providing a "stronger" ground is not the proper solution to your problem. A dipole antenna fed with ladder line requires no RF ground at all if it is electrically balanced.

>Questions:
>
>1) What does the LOCK switch *really* do on the TenTec 509?

I used an Argonaut many years ago - if I remember correctly, the LOCK switch merely unbalances the balanced modulator and generates full carrier CW. It is provided as a convenient method of tuning the rig when a CW key is not available.

>2) Do I have a real problem, or are the "symptoms" merely artifacts of
>the particular rig configuration?

While I suspect the problem results from the antenna system, it's impossible to know for certain. So far as I know, there is nothing "usual" about the symptoms you describe, at least as they might specifically relate to the Argonaut or tuner.

>3) What suggestions do you all have for debugging this situation, or
>is it hopeless given the rig configuration?

You will need to test the rig (and tuner) either into a dummy load, or into a known balanced antenna that will present a suitable impedance to the tuner. If you elect to try the dummy load, I would suggest simulating your antenna system as closely as possible. Given the Argonaut's power output, it may be possible to build a good 300 ohm load by paralleling a few 2 watt carbon composition resistors. The final value is not critical and anything from 200 to 400 ohms should be fine.

Finally, note that unwanted chassis RF can be created not only as a result of antenna/feedline imbalance, but also if the antenna system presents a load that is outside the balun's range of suitable impedances. Under these conditions, the balun can lose the ability to convert from unbalanced to

balanced feed, effectively unbalancing the system.

Source record: 243792

Quite simply, no coordinating body will put an end to this childish bickering over "control" of frequencies. It has been going on for over 20 years and will continue until our hobby sees its demise. A demise brought on by childish bickering over "control" of frequencies.

Fact is, in the case of SoCal, UHF repeater pairs are exhausted. We don't NEED any more repeaters. Most of the damn things sit unused 80% of the time anyway. It is not necessary for every freakin' group to be represented by a repeater.

Fact is, most folks now 'days put up repeaters as an extension of their own egos, NOT for the "public good" or to "advance the amateur radio art." I know that's one of the reasons I have a UHF machine, and I'll be the first to admit it. But I made an arrangement with the co-channeled users on the same frequency and they know they are all welcome to use my box when in San Diego, and vice versa. No bickering there.

Fact is, if the FCC gave a rat's ass about this hobby they would take a look into the practices of coordinating bodies. But they don't have the time, money or desire. They're too busy looking at ways to market spectrum.

And while on that subject...

Think of how VALUABLE the UHF spectrum is. Why, the FCC could auction off our channels for millions of dollars to private concerns.

What...you don't think they've already thought about doing it?

PuLLLLease!

>gives is the simplest equipment, and it doesn't hold that margin by much.
>
I do not beleive that CW should be a condition for licence. I'll grant that
better modes are not much more expensive or harder to built BUT, There is
no other mode so versitile. CW is not limited to radio (don't nitpick me
on CW meaning continous wave) I can use a light, wistle, horn, teaspoon or
blink my eyes and some one else that knows the code can copy me.

I beleive that if digital modes used tokenization to the extent CW dose
(Q Signals) the band width could be less than CW.

I also think that if we applied DSP to CW and converted back to sound that
the trained human ear could beat the machines. The through put would be
lower with a human on the recieving end but he will be more versitile.

I have spent the last 6 years working with embeded systems, DSP, data
aquesition and machine vision and I have found that what is obvious to the
ear or eye is not so easy to pickout with a computer. The dsp answere is
a fantastic tool but it lacks versitility. It will get better but CW will
always have a place.

5539. Solar Car Race 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-22 00:00:00 UTC
From: ga19989@inet.d48.lilly.com
Message-ID: <1995Jun22.224553.5231@inet.d48.lilly.com>
Source record: 243801

Wondering if anybody out there on the road between Indianapolis and Golden Colorado has been keeping up with the progress of the 1995 SunRayce of solar powered cars. It's a 9 day rally ending 29 June in Golden, followed by a climb up Pikes Peak for the more successful cars.

Thirty eight colleges have cars in the race, including Mexico,Canada, and two that had to come in by air in little boxes (Hawaii and Puerto Rico).

If you reside along US 40 or US 36 the race route may pass near you, with stops in major towns (St Louis, Denver, points between).

Saw the cars leave Indy last Tuesday, some very nice work in them and LOTS of solar cells. Also many have radio telemetry for chase vehicles to monitor performance.

If you get a chance to see them up close, please let me know how the Puerto Rican team is doing... I went out on limb to get assembly space for their car in my company, now the guys in the shops are wondering how they are doing. These kids worked night and day for two weeks to get their car ready (as did most all the teams) and they sure do deserve some credit.

Thanks... trusting that the ham fellowship will extend beyond radio...

Mel Crichton, KJ9C

How about just getting rid of the complete amateur test and making it a
free-for-all just like the 11 meter band !

Dump CW..I'm not that hung up on it.
Just be sure to have some means in place to maintain some level of
operator competence. WE wouldn't want the HF bands to turn into an 11
meter "freeband".

That's right Bill...it doesn't exist for Amateur Radio (yet ?).

So what's your point and reason that CW should go ?

Hugh VA3TO

Okay, so like I said...replace it with something that maintains operator
competence on HF.

Ham Radio being a recreational hobby, why not keep CW as part of it ?
It's supposed to be fun ! CW can be fun ! If it's not fun for you then
throw away your key after you pass the test.
There are many things in life that we don't like or agree with but
we have to take the good with the bad.
For those that say we are losing out on possible prospective hams
who have a lot to contribute to the hobby but whos liesure time is too
limited to be bothered with having to learn CW...
I say, oh well, not only our loss, their loss too. No pain, no gain
as the saying goes. Its part of EARNING the privledge.
If only everything came so easy for me !

> is, be it by man, machine, or anything else!

Try decoding machine generated code (any mode) at 12 wpm in very adverse
conditions ! Again, to copy at a very tight signal to noise ratio the
machine would have to be set to be so sensitive that it would be
hiccuping at every blip of noise.
The speed difference point is well taken though.

Like I said, nothing is 'foolproof'. There will always be bad apples in
the basket. Wait 'til the CW gets dumped and tell me it won't get
worse.

I only insist that CW be known until something can replace it or the
testing is restructured such that the level of opertor competence
is maintained (or improved).

Granted, a human will never match the decoding speed capability of a
machine. My challenge is that a human will be able to exceed the capability
of a machine to copy code as conditions gradually diminish.
Use all the filtering DSP algorythms you like. Characters will be missed
as the machine has to re-adjust itself while conditions are changing.
This is aside from the characters that would be missed when tones become
non-existent...as with in the case of a human.

Okay, are we getting particular on the use of the word obsolete ?
How about...CW is STILL widely used throughout the world and is still
required by several facets of the hobby so it's no wonder it is still
with us.

>
> : What might these modes be that can be demonstrated to be as effectively
> : reliable in adverse conditions ? RTTY ? Baudot ? Packet ? ...NOT !!

I have no other proof than setting up a challenge with only the
equipment available to me. What equipment is it that you suggest could
outperform a human ear/mind to decode CW in extremely adverse conditions
? Have you witnessed a machine decoding CW when you could not
distinguish the tones ? Inasfar as I cannot backup my statement, can
you ?

I've yet to see any such filtering system with the most advanced
algorithms programmed into it to enable a machine to decode CW in the
aforementioned conditions.
There is no question that technology is forever advancing and perhaps
you will be correct.

Sure, if the math relates to electronics and/or radio theory, I'm all
for it but I think your implication is that "math is about as relevent
as CW in this day and age" with regard to earning ones HF privs.
Like I said before...by all means, dump CW...just be sure that testing
is in place to maintain a similar or better level of operator competence
on HF. Keep in mind, the whole world is listening when you're on HF.
Incompetent operators could be inadvertantly mess up communication half way
around the world.

> KE4GHS
>

I have no doubts that there are more efficient means of data transfer
via radio. Ham Radio is a recreational hobby and is supposed to be fun.
CW is (or can be) fun. Nobody said that it is essential that CW must
have a relative roll in Amateur Radio (though it does in some facets of
the hobby). Perhaps in Commercial or Military applications the efficiency
of data transfer is essential but not in Amateur Radio.
The skill involved in learning it only represents the earning that is
required to demonstrate a persons desire to gain HF privs.

Shawn C. Masters (smasters@bzy.gmu.edu) wrote:
: Something being obsolete
: has nothing to do with how many people use it, only with how it staks up
: with other available technology.

Hmmm. Not that it matters...

"Obsolete. a) no longer in use. b) of a kind or style no longer
current."

"Aha" Shawn says. "See, definition 'b' is what I mean!"

Sorry. "Current. a) generally accepted, used, practiced, or prevalent
at the momemt."

What you mean is "Morse is not current state-of-the-art technology."
So what? Neither is SSB, ATV, SSTV, RTTY, AMSAT, FM, internal
combustion engines, sail boats, lawn chairs, or sex.

: Mathematically, CW is dead.

Huh? I think we'll all have to think about that one for a while.

: By going to m-ary, coherent FSK
: the digital mode can get through where CW can't (10^-5 compared to 10^-1
: error rates).

Well, not being a technowiz, I can't dispute this. But who ya gonna
communicate with? If communicating is your aim, using a mode that is
"oldfashioned" and in widespread use seems more efficient than using
a mode that only a few technophiles understand or use. What's the
antonym of "obsolete"?

: How about if we test for knowledge of the mathematics behind
: each mode. Then I wouldn't hear as much about how great CW is.

Let's see: .---- plus .---- equals ..---------

Hey, that's not right! The answer SHOULD be ..---

Dang, Shawn's right! CW _IS_ mathematically dead!

And I know this might be a bit picky, but darn it Shawn, it's Amateur,
NOT Amatuer. I can accept people who don't use code as "real hams".
I have no trouble accepting no-code Techs as "real hams". Heck, I'll
even accept an "appliance operator" (as long as he or she is a good
operator). But I have a real problem with a guy who consistantly
miss-spells "Amatuer" (sic).

5550. GB2RS News 25th June 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-22 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <803853428snx@llondel.demon.co.uk>
Source record: 243936
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 25th of June and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start with a reminder to Morse test candidates that the DTI have announced an increase in Morse test fees with effect from the 1st of July. From this date, the fee for the 12 words per minute Morse test will be 18 pounds, while for the Novice five words per minute Morse test it will be 13 pounds.

Now news of Special Event Stations on the air in the next couple of weeks:

GB6RS will be operating from the Royal Signals Amateur Radio Society stand at the Longleat Rally today, Sunday the 25th. Operation will be on 20 and 80 metres, SSB and CW.

Members of the Radio Amateur Relief Expeditions group will be operating YR0R from Romania from Monday the 26th of June until the 7th of July on 10, 15, 20, 30, 40 and 80 metres, CW and SSB.

In order to commemorate the 75th anniversary of the Royal Corps of Signals, GB75RS will be operating from Blandford Camp in Dorset from the 28th of June until the 20th of July.

Caldey Island will be on the air as GB5CI on Saturday the 1st of July from 0900 to 1500 UTC on 20, 40 and 80 metres, and possibly also 2 metres. Caldey Island counts as EU-124 for the RSGB Islands on the Air Awards.

And on the 1st and 2nd of July, GB5EPN will be active from the Boat Museum at Ellesmere Port, celebrating the 200th anniversary of the borough of Ellesmere Port and Neston.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

Heard Island, VK0, will be the target of a major expedition which is being planned for November this year. The team is led by K0IR of the successful Peter the First Island expedition, and also includes DJ9ZB, HB9AHL, PA3DUU, K5VT, N6EK and JH4RHF.

From Costa Rica, Klaus, DK6AO, should now be on the air signing TI/DK6AO. He will attempt to activate IOTA island groups NA-116, NA-117 and NA-155 during his stay in the country.

From Saaremaa {pronounced SAHR-emmah} Island in Estonia, which counts as EU-034 for IOTA, ES6Z/0 will be on the air from Thursday the 29th of June until the 4th of July. Activity will be on all bands from 12 to 80 metres, SSB and CW.

And the Azores DX Group will be active as CU3DX on the 2nd of July from 0900 to 2100 UTC on all bands, SSB only.

Next the Rally News:

The Amateur Radio Caravan and Camping Rally is taking place at Tutbury in Staffordshire this weekend, from the 23rd to the 25th of June.

The Longleat Amateur Radio Rally is being held today, the 25th. Attractions include 150 trade stands, 20 club stands, a large bring and buy sale and catering. There will also be free parking, camping and caravaning facilities plus an RSGB bookstall and membership services stand.

On Sunday the 2nd of July, the York Radio Rally will take place at the Tattersall Building at York Racecourse. The doors will open at 10.00 am and talk-in will be on 2 metres, channel S22. For further details, contact Dave, G7FGA, on 01 904 790 079.

The Amateur Radio Caravan and Camping Club will hold a rally at Brooksby Agricultural College, near Syston, in Leicestershire, over the weekend of the 7th to 9th of July. There will be no trade stands, but amateurs with caravans or tents who wish to attend should telephone John, G4UQS, on 0116 283 3225 for details and a booking form, which must be returned by this Saturday, the 1st of July.

On Saturday the 8th of July, the Cornish Amateur Radio Club will hold its 32nd radio rally and computer fair at Penair School, Truro. The event will feature a large hall with trade stands a bring and buy stall, and official Morse code tests. The doors will open at 10.30 am and talk-in will be on 2 metres, channel S22. For further information contact Ken, G0FIC, on 01 209 821 073.

Now for the HF contest news:

Teams from the Lichfield Amateur Radio Society won both the CW and SSB Affiliated Societies Contests this year. The leading individual in the CW section was Bob Henderson, G3ZEM, while the top scorer in the SSB contest was Andy Cook, G4PIQ. The full results, and a feature article on this year's AFS contests, may be found in the July edition of Radio Communication, which is due to be posted to all members this week.

Next some VHF contest news:

The RSGB 432MHz FM Fixed and Open Contest takes place today, Sunday the 25th of June from 1800 until 2200 UTC. The rules are in April RadCom.

The Worked All Britain 144 MHz QRP Phone contest takes place today, Sunday the 25th of June, from 0900 to 1300 UTC, followed at 1400 until 1800 UTC by the WAB 433 MHz Phone contest.

Next weekend, one of the major RSGB contests - VHF National Field Day - will take place from 1400 UTC on Saturday the 1st of July, for 24 hours. This is a portable contest and up to four separate stations may operate simultaneously in the 70, 144, 432 and 1296 MHz bands. The full rules are in the May 1995 RadCom.

The 3rd RSGB 144 MHz Backpackers contest will take place on Sunday the 2nd of July, from 1100 to 1500 UTC. The full rules are on page 83 of the April RadCom.

And now the solar factual data:

The period from the 12th to the 18th of June saw solar activity at very low levels and the geomagnetic field at mostly quiet levels. Sunspot numbers declined from 28 on the 12th to zero on the 15th and 16th and then recovered to 24 by the 18th. The mean was 14. Solar flux levels declined each day from 81 units on the 12th, to 70 units on the 17th and 18th. The average was 74 units. A small number of sub flares took place up to the 14th, the largest being a B3/SF on the 12th. The electron fluence remained at a moderate level throughout the period. Not all the X-Ray flux data is at hand, but from the 12th to the 15th levels averaged A6.7 units. The 90-day solar flux average on the 18th was 78 units, down one unit from last week.

Geomagnetic activity was mostly quiet and was down to only Ap 3 units on the 13th. Levels increased on the 18th to unsettled conditions, with an Ap index of 18. The average for the period was Ap 7 units. The aa indices, as supplied by the British Geological Survey for the 6th to 12th of June, remained at very quiet levels and averaged only 9.7 nanoTeslas, about K1. On the 12th levels were down to 5.1 nanoTeslas.

I'll repeat the figures: spots - 14, flux - 74, Ap index - 7, and X-Ray flux A6.7.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 9th to the 15th of June, averaged 7.4MHz. Levels increased from 7.5MHz on the 9th to peak at 7.9MHz on the 11th, before declining for the rest of the period. The darkness hour lows averaged 3.9MHz, but were up to 4.2MHz on the 12th. The daytime highs took place as early as 0900 and 1100 hours on the 9th and 10th respectively, and around 2100 hours for the remainder of the period. The darkness hour lows took place between 0300 and 0400 hours every day. On the 12th, G4FVP in County Durham reported sporadic E for most of the day on 50MHz with an opening on 144MHz during the morning period. On the 13th good double hop sporadic E to North Africa was noted.

And lastly the solar forecast.

This week the quiet side of the sun is expected to be rotating away. Solar flux levels should start to increase from midweek and be up to the mid 70s by next weekend. Geomagnetic activity should start at quiet levels, but soon increase to unsettled to active conditions for the rest

of the week. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north. The darkness hour lows could be up to their highest levels of the year now, due to the nights being at their shortest in the northern hemisphere. The Beta-Taurid meteor shower is expected to peak between the 27th and the 29th of June. Sporadic E can still be expected particularly on 28 and 50MHz, but also to a lesser extent on 144MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Echo and G7 Uniform Romeo series, and Novice calls in the 2 0 Alfa Lima and 2 1 Echo Echo series.

Actually Fat Steve you got this one correct. Bob Shuck heard a rumor about
me and passed it on as fact. There was some truth to it. The story was mostly
false and Bob Shuck was ordered to apologize and did.

5555. cb-Funk-Geraet

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-22 00:00:00 UTC
From: peg@trumpet.ping.de
Message-ID: <5oKs5-JpvZB@trumpet.ping.de>
Source record: 243941
Cross-posted to: zer.z-netz.telecom.cb-funk,rec.radio.amateur.misc,rec.radio.cb

Mail from: Peter Grannas

Hallo zusammen!!!
Da ich mir (als Neueinsteiger) ein CB-Funkgeraet fuer mein Auto zulegen will
aber leider noch keine Ahnung habe, bitte ich Euch um Hilfe.

Ich will mir fuer 100,- DM ein gebrauchtes CB-Funkgeraet von MIDLAND Modell
ALAN28D kaufen.

Unten seht Ihr die technischen Daten des MIDLAND ALAN28D.

Meine Fragen lauten nun:
Ist dieses Geraet gut, d.h., ist es fuer einen Einsteiger/"Fortgeschrittenen"
geeignet?
Ist der Preis 100,- DM akzeptabel? (Gekauft 1993 fuer ca. 300,- DM.)
Evt. noch weitere Tips/Ratschlaege auf die man achten sollte?
Welche Antenne wuerdet Ihr mir empfehlen? (Nicht zu teuer!!!)
Wo kann man Hilfe bekommen, z.B., um mit einem Stehwellenmessgeraet die
Antenne richtig abzustimmen?

Vielen Dank an alle, die sich die Muehe gemacht haben diese Fragen zu lesen
und mir zu antworten!!!

Gruss Peter

Hier nun die technischen Daten des MIDLAND ALAN28D:

Allgemein:
Kanaele: 40, schaltbar (FM), 12 (AM, K4-14)
Frequenzbereich: 26.965-27.405 MHz
Frequenzaufbereitung: PLL Synthesizer
Temperaturbereich: -10ï¿½C/+55ï¿½C
Stromversorgung: 10.8-15.6V DC, 13.2 Volt nominal
Abmessungen: 210x155x50(mm)
Gewicht: 1100 Gramm
Mikrofon: Dynamisch
Halbleiter: 42 Transistoren, 32 Dioden, 10 IC's
Betriebsarten: AM/FM Umschaltautomatik
LED S-/Power Meter: Leuchtdiodenkette
Anschluesse fuer: beliebige Mikrofone, auch mit Vorverstaerker,
Selektivruf ueber 6-polige Mikrofonbuchse
moeglich, EXT. Lautsprecher 4-8 ohm,
PA. Durchsagelautsprecher,
EXT. S-Meter 2.5 mm Buchse
Antenne: PL-Steckbuchse

Empfaenger:
Empfindlichkeit: AM 0.4ï¿½V bei 12dB S + N/N (ï¿½=my Mykro)
FM 0.3ï¿½V bei 12dB S + N/N
Nachbarkanal-Selekt: besser 70dB
Nebenempfangsstellen: besser 65dB
Intermodulationsabstand: besser 63dB
Squelch: ab 1ï¿½V
ZF-Frequenzen: 10.695 kHz/455 kHz
NF-Ausgangsleistung: 2.5W/8 ohm

Sender:
HF-Ausgangsleistung: FM, 4W stabilisiert
AM, 1W stabilisiert
Frequenzhub: FM 2 kHz begrenzt
Modulationsgrad AM: 95% begrenzt
Oberwellenunterdrueckung: besser als 90 dB
Nebenwellenunterdrueckung: besser als 72 dB
Frequenztoleranz: +-300Hz zwischen -10ï¿½C und +55ï¿½C
Modulations-Frequenzgang: 400-2700Hz - 6dB

I don't understand why you are whining that I and others have not responded to the fact that the FCC permits closed repeaters. We have acknowledged that.

However, not banning something doesn't make its unchecked proliferation desireable. There have been many posts on this thread to this effect. Evidently your claim to have read these posts is not correct?

Probably because you don't read the posts on this thread, other than your own. Your last several posts have covered points that the rest of us went over weeks ago.

If you are going to join a thread, at least have the courtesy not to burden the rest of us with your questions about things that have already been settled. This includes questions about my radio activity, the FCC permitting closed repeaters, and similar topics that you bring up as though we haven't already beaten them to death.

Give us all a break Dave. Do your homework before wasting our time.

Now this post simply illustrates your ignorance of Southern California conditions. It simply lacks all credibility or association with reality. The common knowledge out here, first of all, has been mentioned on this post a gazillion times: i.e. since most of the repeaters are closed, how can a casual mobiler make lots of qsos as you claim to have done.

Secondly, you'll forgive me for thinking that it's a bit much for you to have strong opinions based on visiting out here once in a while.

Thirdly, I'll say it again. I'm active on many 2m repeaters, have a lot of friends who operate on them, and I don't care for people referring to them as CBers. I've been to Texas, Jim. It wasn't Disneyland.

For the most part, our 2m repeaters are well-run with good operating practices predominating. Your occasional trips to LA don't change that.

About a year ago I bouught brand new batterys for my HT.
I used the batterys for a few weeks and then put them away
for about 8 months because I was to busy to use my HT.
Now they loose their charge just hours after being recharged
and I can foget about transmitting because they only last
a few min then.

I know you are supposed to be able to "zap" NiCd's so they
work again. My question is...
How much voltage?
How much current?
How long do I leave the voltage applied?

The batterys in question are Yaesu FNB-25
7.2 volts @ 600mAh

I paid $90 for these things and they should have worked at
least 18 months with *continous* usage. Anybody know what
to do?
Chris......

(yes, I know i can't spall!)

The latest couple of RACES bulletins that I've read deal with the use of the near vertical incident skywave (NVIS) antenna. Now I'm getting questions about building such an antenna. Does anyone have any info. to share on NVIS antenna design?

Someone in the club mentioned that the DoD holds a patent on NVIS, but I can't confirm that. I do know that this type of antenna design isn't discussed in the popular antenna handbooks.

Any help will be gratefully appreciated.

Jim

5564. Need software DTMF Decoder

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-22 00:00:00 UTC
From: rrch@crl.com
Message-ID: <3sc7ik$seh@crl4.crl.com>
Source record: 243950

I have been working on a small project which involves decoding DTMF tones recieved on a 2m HT, processing those tones, and looking for commands that I have designated. Eventually, I hope to be able to do some remote control of various devices by way of a relay board connected to the computer. However, I have been unsuccessful in creating a functioning decoder (in Turbo Pascal 6.0), and cannot seem to find one out there that really WORKS and includes documentation on how it was done!

Does anyone either have such a program with documentation or know how I might write such a program? Thx,

de Ron - KB0MGA

I think NB/PEI hams were given the option to keep their VE1 calls (last I heard)
but I believe that many chose to switch to VE9/VY2 as it gave many the option
of selecting a 2-letter VE9/VY2 call rather than keeping a 3-letter
VE1. This all happened shortly after I moved from VE1-land to VE3-land so
I'm not certain of the final outcome.

I didn't know the Government could patent anything. Perhaps the inventor of
the antenna has a patent on it, and has licensed it only to the Government.
If there really is a patent on it, then you could get some information about
it from the patent office.

Governor's Office of Emergency Services

Bulletin 384 - for Release 6/26/95
MGT - ICS What Northridge taught us! 1/2

What has the Northridge earthquake taught us that the others haven't? Here is a summary from an article in the San Diego County RACES newsletter right after the event:

"If anything, that we in the RACES need to wake up and quit 'playing ham radio' and receive training in multiple disciplines, particularly in other services' radio communications. The RACES job is to provide skilled operators, equipment and, yes, amateur radio to the government. Skilled operators mean you and I, not someone else. If you want to be of service to your community by using skills acquired through amateur and public safety radio, then RACES and ARES are the means to do it.

Both organizations provide a needed service to it's users, but both suffer in the same problems - resources and training. If you are not trained in a particular discipline, be it Sheriff's Department radio procedures or Red Cross terminology's, then you are part of the problem, not part of the solution. [If] you and/or your organization are seen as part of the problem then you and your organization will never serve the public. Those agencies who constantly do serve the public will find another medium to call upon when needed. If you say, 'there is no competition to amateur radio', then you lack vision and fail to see the total global environment." (extract continues next week)

Footnote: the same theme of "it's time for the Amateurs to stop playing" was heard recently from a County EMA official who said (of their ACS program which includes REACT personnel): the REACT responders are far more professional and disciplined than are the Amateurs" who waste time and energy on unrelated matters or talk." (Comment: Ouch - that hurts. Sounds like too much shop talk, reminiscing, flying decades old missions, and using "ham-speak"!)

From: smasters@bzy.gmu.edu
Message-ID: <3sc7q3$edi@portal.gmu.edu>
Source record: 243954

Gordon Couger (gcouger@jsun.agen.okstate.edu) wrote:
: I do not beleive that CW should be a condition for licence. I'll grant that
: better modes are not much more expensive or harder to built BUT, There is
: no other mode so versitile. CW is not limited to radio (don't nitpick me
: on CW meaning continous wave) I can use a light, wistle, horn, teaspoon or
: blink my eyes and some one else that knows the code can copy me.

I'll give you all of that. That's why it has been so successful in
history.

: I beleive that if digital modes used tokenization to the extent CW dose
: (Q Signals) the band width could be less than CW.

Tokenization for digital modes can be done more effeciently on the
fly. Look at LZW compression for a basis for one such method, and V.32 bis
as an actual implementation.
Currently digital modes can use less bandwidth then CW, but no one
has much interest in such a slow digital transmission. (60 WPM ~= 60 baud
w/o compression)

: I also think that if we applied DSP to CW and converted back to sound that
: the trained human ear could beat the machines. The through put would be
: lower with a human on the recieving end but he will be more versitile.

If the DSP can pull it out for the ear to decode, why not just have
the DSP decode it? Each step in the loop reduces the overall data quality/
content.

: I have spent the last 6 years working with embeded systems, DSP, data
: aquesition and machine vision and I have found that what is obvious to the
: ear or eye is not so easy to pickout with a computer. The dsp answere is
: a fantastic tool but it lacks versitility. It will get better but CW will
: always have a place.

The human mind can find patterns better then most traditional
patterns. The ear and eye are not that good at finding signal in noise
though. Systems can now be designed to pull signals out that are near the
lower bound of what is theoretically possible. Are you saying the eye and
ear are beyond the theoritical maximum of demodulation? Pattern recognition,
sure my experience in image proccesing shows how bad machines are at
feature extraction, but demodulation?

73,
Shawn

Like I said to you before, I really don't like talking to most hams.
Most of them want to compare rigs right off the bat. Then the apliance
operators will remark at how good my cheapo rig works, not realizing that
their problems were radiator based, not equipment based (ie running a
5/8ths wave on an HT). You start to talk about technical areas, and they
get off the air real quick, and I don't think my views on religon or
politics are fair game for a QSO either. Once in a while I'll run across
someone that is interesting, but it's few and far between.
Personally I enjoy building, experimenting, and digital
communications. When I finnish this master thesis I'm most likly start
doing more. In the mean time, for talk, the internet is a much better
way to go, and experimentation amatuer radio is the way to go.

: > So you say what about drop outs. Well by changing the packet size,
: >and adding time diversity, drop outs become a non issue for digital modes.
: >At best a CW operator can guess at the missed modulation. By adding coding
: >the digital mode can actually receive a perceived gain in the signal to
: >noise ratio, since the bit error will go down.

: If conditions get too bad just say SRI OM QRM ES QRN and find someone
: else to talk to. None of us *amateurs* have such time-sensitive high-
: priority traffic to pass that we can't forego a QSO and wait for
: conditions to improve. Don't become like Digital-Jim and pretend
: you're a military or commercial operator with Flash-precedence
: traffic to pass.

Much of my RF work is for autonmous control of helocopters, so I'm
a little senstive to this. What it highlights though is the ability of
digital to guarentee a delivery.

: > The human ear is not an optimal receiver.

: No one said it was. It boils down to getting more satisfaction using
: our given senses rather than depending upon hardware. Why have a
: machine do something that you're perfectly capable of doing?

I can count three people who have said that. That is one of the
pieces of urban folklore in the post-modern era that I would like to
dispell. Don't even talk to me about golden ears:-).

: > For further reading on the subject of why CW is obsolete, look at

: Obsolete with regard to what? I see you're problem, Shawn. You spend
: your time reading about `obsolescence' rather than getting on the
: air and having some fun.

Obsolete is when a things doesn't measure up to other things in its
normal use. Kind of like a 286 is now obsolete in price and preformance.
Still works if that's what you have, but I wouldn't buy one today.
You and a few other people are making an assumption that all people
enjoy CW. Guess what, some do some don't, and I'm one that don't. I'll
stick with the digital stuff, and do my communicating on the internet.

: You remind me of a weather forecast office with no windows insisting
: that it's raining outside when in fact it's a nice sunny day.

You know about weather forcast? I thought you were one of those
people that thought it's more fun to go by the farmers almanac each day.

: and electrical bond to the ground window, similar to the way a coax
: shield is treated. Only the hot wire(s) (I use the plural because you
: may be running in a 220 VAC line to the shack) need a more sophisticated
: treatment.
:

OK, now, combining a couple of the thoughts in this thread...

Since the service entrance to my house is on the opposite side from the shack, and the best place for the ground window is right at the shack (shortest feed line path), and I need to tie the neutral *and* safety wires directly to the ground window, I have no other choice but to use the armor covered, GFI protected, county code inspector questioned option you described before?

Geez, seems like there must be a simpler solution, no?

The whole subdivision is on underground utilities, if that helps, and I don't have (or plan on) putting up a tower, and we aren't in an area known for lightning problems. My previous thoughts on what to do were to take a normal line running back to the breaker panel to a well-pump-thingy, ground the Thingy to the ground window, and make a new wall plug downstream from the Thingy into which all shack equipment is plugged. Does grounding the well-pump-thingy to the ground window cause a code problem? Is the solution as simple as making that one new wall plug a GFI unit?

Thanks for the help! I'm saving all these posts for the electrician who will eventually need to implement it (given my previous experience with the high quality of workmanship in this area :-().

>Others do have my password, so who knows what is possible.
>Others from AOL and maybe elsewhere have posed as me and said nasty things.
> Burt Fisher South Dennis (Cape Cod), Mass.

I was going to stay out of this whole discussion, but this just
exceeded my BS threshold! My aplogies to those who are fed up with
Burt and all discussion of Burt.

Burt, do you understand that if you give people your password (or
write it on the wall or otherwise fail to keep it private) you are
allowing others to pose as you? You can't renouce responsibility by
announcing that you've been irresponsible. Did you ever think of
changing you password? Or are you too attached the the notion that
you can't be held responsible for anything because maybe someone else
did it?

sarcasm mode ON
All in all, you certainly seem like a wonderful role model for your
students and your daughter.
sarcasm mode OFF

If I recall correctly, this whole nonsense started off as "hams are
boring." Change that to "Some hams are boring," and I'll certainly
agree with you. I might very well find you boring if you stopped
being so annoying!

But many of the hams I know have rich and interesting lives:
attending elementary school, learning to fly airplanes, playing harp
professionally, taking bicycle rides across the US, adopting children,
taking leadership roles in their religious communities, falling in
love, playing trombone in a marching band, keeping gardens, teaching
ham classes, traveling overseas, starting new careers, working in
disaster services, cooking for 50 people on field day, and on and on.
(No *one* ham, to my knowledge, has done all of these things, at least
not in the same year!)

I have two suggestions for you, Burt:

1. If the hams you know are boring, find some who aren't. They do
exist, and I'm sure they're not all in California.
2. Take responsibility instead of trying to hide from it.

ARLX026 Ham radio on TV 6/23

ZCZC AX95
QST de W1AW
Special Bulletin 26 ARLX026
From ARRL Headquarters
Newington CT June 21, 1995
To all radio amateurs

SB SPCL ARL ARLX026
ARLX026 Ham radio on TV 6/23

Amateur Radio is scheduled to be demonstrated Friday morning, June 23, on the ''Breakfast Time'' program on the fX cable television network.

ARRL-registered teacher Lew Malchick, N2RQ, from Brooklyn Technical High School, and students from several New York City schools, will use a set-up in Madison Square Park to make live contacts. Following that, ARRL Headquarters staffers Jennifer Hagy, N1TDY, and Bob Inderbitzen, NQ1R, will be on hand to answer questions from the show's host.

''Breakfast Time'' is a two-hour show aimed at the young adult audience. It runs from 7 to 9 AM Eastern time. The Amateur Radio segment is expected to last about eight minutes, in several parts.

Space shuttle mission STS-71 is scheduled to be launched the same day, in the afternoon, and will be mentioned on the show. STS-71 is scheduled to feature both Shuttle Amateur Radio Experiment (SAREX) activities and a first-ever docking with the Russian Mir space station.

I've been following this thread for weeks now, and I finally heard
enough of this odious crap that you are spewing, Roger. I've
personally made six trips to Southern California in the last three
years, and I have had no problem using any of the closed systems that
I've had the courtesy to ask permission to use. "Common knowledge" or
not, that IS the way things have worked. I can't imagine that these
widely-spaced and infrequent trips out there happened on the only day
that someone was around who had a bit of kindness for a stranger in
town.

>Secondly, you'll forgive me for thinking that it's a bit much for you to
>have strong opinions based on visiting out here once in a while.

You need to be forgiven for lots more than just a false opinion about
how visitors are treated in Southern California....

BTW, when was the last time that YOU were a visitor in Southern
California? I think that you should apply some of your own logic to
yourself - YOU can't speak as to the treatment of visitors from THEIR
perspective until you've BEEN one.

>Thirdly, I'll say it again. I'm active on many 2m repeaters, have a lot of

> Could someone post some information concerning microwave transmissions...
> There is a posting from someone in alt.radio.scanner that was looking for
> a 10 kilowatt amplifier for the 10 GHz band. He's probably figuring on
~~~~~~~~~~~

If he wants that kind of a power output at 10 GHz, I sure hope he's
got real deep pockets.....he *might* be able to generate 10 KW of *PEAK*
power using a surplus magnetron operating as a pulsed radar transmitter,
but 10 KW of *steady-state* output is a many kilobucks proposition.

> band, and microwaves are a dangerous RF energy source, aren't HAMs even
> limited as to how much power they can use on microwave bands?

The amateur power limits apply to all bands.

> Please post any comments on this since I posted this fella' back stating
> my proposed concern of being burnt by 10 kilowatts aimed my way on
> the highway whilst some dummy tries to jam a radar gun.

For that kind of power output, he'd need to be towing a *LARGE* power
source along with his "10 KW rig." I suspect that the person who posted
this
(a) knows little or nothing about microwave electronics; OR

(b) is just posting this drivel to stir up a controversy; OR

(c) both of the above.

One things for sure, a 10 KW rig would sure be hard to hide in a car.
That even goes for a 10 KW peak-power pulsed radar setup - it ain't going
to fit in the glovebox.

There's this to think about, too: The fine for unlicensed operation,
for willful & malicious interference, and for operating using prohibited
modes and/or excessive power levels (even assuming one is operating in a
band for which one is licensed) can be as large as $10,000 per day. Rest
assured that anyone caught "puposely" jamming a police radar would get the
max fine (and sentence).

A couple of speeding tickets, by comparison, are real bargains.....

I belive you saw it while traveling I-75. That is my antenna farm, jealous?
Really, its the old Voice of America broad casting center. Designed to cover
South America and team up to broad cast to Eastern Europe during the Cold War.
I think it is close now, maintained in case we need to use it again.

buffingt@scf.usc.edu (Roger J. Buffington) writes:

>
> Now this post simply illustrates your ignorance of Southern California
> conditions.

How? Ignorance is lack of knowledge. If Mr. Reese was able to use 440.
Then he has the personal knowledge of his experience. I think Mr. Reese has
a better feel for what is going on in So. Cal. than you will ever give him
credit for.

> It simply lacks all credibility or association with reality.
> The common knowledge out here, first of all, has been mentioned on this post
> a gazillion times: i.e. since most of the repeaters are closed, how can a
> casual mobiler make lots of qsos as you claim to have done.

When I lived in So. Cal I used 440 after I gave up on 2m (didn't take
long). I still travel to So Cal. and find 440 still just as nice as it was
when I left. Even when I travel to other states I look up the "closed" radios
in the ol' ARRL directory. I talk to the people on the "closed" radio, and
without fail I am invited to use there radio and join in the convesations
for the duration of my stay. But I have a different attitude than some when
I show up on a "closed" radio.

>
> Secondly, you'll forgive me for thinking that it's a bit much for you to
> have strong opinions based on visiting out here once in a while.
>

Well I used to live there. Mr Reese and I seem to share opinions.
You just can't accept that Mr. Reese could have a valid point that is
different from yours.

> Thirdly, I'll say it again. I'm active on many 2m repeaters, have a lot of
> friends who operate on them, and I don't care for people referring to them
> as CBers. I've been to Texas, Jim. It wasn't Disneyland.
>
Jim said that it made CB seem tame. That puts 2m... I don't remember any
one from TX claiming it was a Disneyland. Did I not read another posting?
However 2m and Mr. Toads wild ride on the other hand....

> For the most part, our 2m repeaters are well-run with good operating
> practices predominating.

Well run, good operating practices, I can beleive that. From a technical
stand point for the repeater and the sponsoring organization. But good
operating practices of some of the users. I don't think so. When I lived

there 2m was a joke. Has it gotten better? No. Over deviation, excessive mike gain and the like to not make for a good sounding system. The guy who has his gain up so high he can sit back in the easy chair 3 feet away. And talk on the radio so we can hear the effects of the sound waves reflecting from other surfaces in the room. Hmmm...

> Your occasional trips to LA don't change that.

Since you won't buy Mr. Reese's observations from occasional trips to LA as valid. Being a native to So Cal. I will personally indorse his remarks therefore making them valid. But then again they are not your views.

Field Day in New England

The following lists of club Field Day locations appeared in the Boston Globe
on Sunday June 18th on the Hobbies page. A short article
accompanied the list explaining Field Day and inviting the public.

All of the following clubs have invited the public, most would
also welcome guest operators to participate in the festivities.

73 Steve F
W1GSL

List compiled by W1GSL.

*Acton-Boxborough Amateur Radio Club
McConnon property on Nagon Hill Road in Acton.
Dave Potter 508-263-0454

*Amoskeag Radio Club, Manchester NH
Weston Observatory near Derryfield Park, off Mammoth Road.
Al Stewart, 603-622-4712.

*Barnstable Amateur Radio Association +
Cape Cod and Islands Amateur Radio Association
Canal Coast Guard Boathouse at the east end of the CC canal on the Cape side.

*Boston Amateur Radio Club
Larz Anderson Park, in Brookline. At the top of the hill above the auto museum
Ed Parish 508 664-1771

*Billerica Amateur Radio Society
Nashoba Valley Ski Area in Westford
Susan Raisbeck, WN1V sraisbeck@keps.com, 508-670-6668 (d), 508-250-1235 (e).

*Candlewood Amateur Radio Association
Cadigan (Brookfield Park) on Candlwood Lake Road Brookfield Ct.

*Capeway Radio Club
Wampatuk State Park Forest Hingam MA

*Cape Ann Amateur Radio Assn.
At the Babson Museum sight Gloucester MA
on the main road to Rockport

*Framingham Amateur Radio Assn.
Gerard's Turkey Farm on Water St. Framingham MA
Just east of Joseph Rd.

*Mayflower Amateur Radio Club
Plymouth Municipal Airport South Meadow Road, Plymouth MA

*Montachusett Amateur Radio Association
Top of Wachusett Mountain in Westminster. MA off of Route 140.
Phil Oliver WA1DWS, 508-537-3099.

*Mohawk ARC
Gardner City Forest, On Route 140 in Gardner MA
Paul A Topolski, N1IPG 508-632-9432

*Minuteman Repeater Association
Slygo Hill. Marlboro MA

*MIT Radio Society
Student Center Oval 84 Mass Ave Cambridge MA
Nick 617 253 3776

1995 New England Field Day locations P2 of 2

*Nashua Area Radio Club
Ridge Rd., Hollis NH
Al Simons, WA1TYB, 603-424-4539 al@simons.mv.com

* N1BVD + N1DGO group
Acton Science Discovery Museum. Acton MA

*North Shore Repeater Association
Winter Island Park Salem, MA.
John Graves WB1EHL 508-526-1400.

*Portsmouth Amateur Radio Club
Stratham Hill Park in Stratham New Hampshire, on Route 33
Nick Thomas AA1LN 603-772-7177

*Portland Amateur Wireless Association
Fort Williams (Portland Headlight) in Cape Elizabeth, ME.
Ronald Levere 207.780.4281

*Radio Amateurs of Northern Vermont + Silicon Junction Radio Club
Redmond Farm, Redmond Road, Williston, VT.
Route 2A to Mountainview Rd, east to Redmond Road, site is at top of hill.

*Wellesley Amateur Radio Society
Babson College, Wellesley, lower athletic fields
Barbara Holdridge, N1ICQ 617 329-2628

*Westford Police Amateur Radio Team
Westford Abbott School, Westford MA.

ARLD033 DX news

ZCZC AE09
QST de W1AW
DX Bulletin 33 ARLD033
From ARRL Headquarters
Newington CT June 22, 1995
To all radio amateurs

SB DX ARL ARLD033
ARLD033 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

SCARBOROUGH REEF, BS7. Wayne, N7NG, states that another license for BS7A has been obtained from the Chinese authorities. Another DXpedition will reportedly take place after this year's typhoon season. The operator team thus far consists of N7NG, ON1RY, SM7PKK, JH4RHF and two others.

CONGO, TN. Hazel, TN7OT, was heard on 14226 kHz around 2000z. QSL via Hazel, BP12, Impfondo, Republic of the Congo, Africa.

TUVALU, T2. After several delays, Masa, JE1DXC, finally became active as T20XC, with lots of activity on both CW and RTTY.

MONACO, 3A. Daniel, 3A2LZ, reports a few pirates have been active from his country. 3A50A has been on the air, though this call has NOT been officially issued. Another station in the same category is 3A2CC. Daniel mentioned contacts made between June 10 and 15 with the Rotary Amateur Radio Society, ROARS, special event station, 3A2RAR, should be QSL'ed via 3A2LZ.

ANTIGUA, V2. Doug, N3ADL, reports members of the Frankford Radio Club, FRC, will be active in this year's CQWW DX Phone Contest October 28 and 29 as V26B. QSL via WT3Q. Doug plans on being active before and after the contest as time permits on the RS12 satellite as well as on 12 and 17 meters as V26DX. QSL via N3ADL.

SPAIN, EH. Some 140 stations are now authorized to operate 6 meters using less than 30 watts of CW or SSB between 50.0 and 50.2 MHz. These stations change their prefix from EA to EH when operating on 6 meters.

GIBRALTAR, ZB2. Dave, N7RK, has announced that his ZB2 operation planned for the last week of June has been canceled. He may try again in the fall.

SVALBARD, JW. Dominik, DL5EBE, will operate as JW0K while here as a member of a scientific expedition of the Norwegian Institute for Biology and Geology Tromso. This should take place from July 17 to August 10 with activity on 40 through 10 meters, mainly CW and RTTY. QSL via DL5EBE direct or the bureau.

KERMADEC ISLAND, ZL8. Although landing permission has not been granted, permission to operate has been granted for the November 1995 DXpedition. Funding for this operation is running shy of expectations. May 1996 is the back-up date for the DXpedition because the boat that goes to the island only goes there every 6 months to drop off supplies for scientists on the island.

Permission to operate has been granted as of June 8th, but no permission had been issued to land on the island (this is still in the works).

Meanwhile, Scott, AA8SM, is conducting a survey in the interest of finding amateurs needs, bands and modes, for ZL8. If you would like to participate in the survey, see the OPDX Bulletin 211 for a survey form.

THIS WEEKEND ON THE RADIO. ARRL Field Day is from 1800z June 24 to 2100z June 25. Exchange Field Day operating class and ARRL or Canadian Section. For complete rules see page 133 in May QST.

Other events for the weekend include the RSGB Summer 1.8 MHz and SP QRP International Contests. For more information on these events, see page 113 of June QST.

>
>Dave, N7DJZ
>
Dave, Roger, et al.....

Is there a workable way we could get a straw poll of what people think?
I'm betting that the number of folks who find the closed machines
a problem will outnumber the rest about 50 to 1. Granted, it may be
weighted with new hams, but they are real licensed radio amateurs and
they will be the ones who are here after the older ones have gone on.

Regardless of where you come down on the issue of open vs. closed, the
pressure that is building because of a perceived injustice is going to
build until something blows. If SCRBBA says nothing, then they invite
their own demise.

This is one area that I, the staunch opponent of the ARRL shall defend. Ever read QEX? That's not your everyday hot seller. Can they help it if the things they publish are what most every ham wants? I mean even you would have to admit that they publish a hell of alot of stuff that's of interest to just about everyone.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 JUNE AND FORECAST FOR 23 JUNE - 25 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 21 Jun
Daily Proton Fluence >1 MeV: 3.2E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 7.3E+08 (high)
X-ray background: A3.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Jun 24 Jun 25 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Jun: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 21 Jun
Learmonth 7 2222 3112
Fredericksburg 9 11
Planetary 10 12

Observed Kp for 21 Jun: 3442 3322
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
23 Jun 8 Quiet to unsettled
24 Jun 8 Quiet to unsettled
25 Jun 8 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 17 was issued on 21 June and is
current for interval 26-30 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
22 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Jun normal normal normal
24 Jun normal normal normal
25 Jun normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
22 Jun 22 near predicted monthly values with spread F during
local night.

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
23 Jun 20 Near predicted monthly values
24 Jun 20 Near predicted monthly values
25 Jun 20 Near predicted monthly values
COMMENT: IPS HF Communications Warning 20 was issued on 21 June and
is current for interval 26-28 June. MUFs at Townsville and Hobart
were near predicted monthly values.

>Nothing really important, but I 'm curious and haven't been able to
>find the answers to these questions regarding attenuators: 1) Is
>there an advantage to the "pi" configuration over the "T"
>configuration? Most circuits that I have seen use the "pi". 2) How
>critical is lead length? Am I correct in assuming that lead length
>should be kept to a minimum? Or is this only critical at VHF and up?

(1)The main reason for choosing the Pi configuration is that the
component values are typically more realizable than for the
T, especially when the required attenuation value is high.
The shunt element of the T becomes very small at high attenuations,
and small absolute component value errors result in large percentage
attenuation errors. In the Pi, the bridge element becomes large,
and small absolute component value errors represent a negligible
percentage attenuation error.

(2) Lead lengths become increasingly critical as frequency increases.
At the lower HF end, leads can be fairly long, IE 1/4 inch is fine.
At the upper VHF+ end, lead lengths should be essentially zero, IE
chip parts are best. Shielding and layout are also important. You
don't want signals to be able to couple around the attenuator. In
this regard, the T has some advantage because the input and output
elements aren't in parallel and don't form mutual coupling loops.

SB SPACE @ ARL $ARLS008
ARLS008 SAREX launch on Friday

ZCZC AS87
QST de W1AW
Space Bulletin 008 ARLS008
From ARRL Headquarters
Newington, CT June 22, 1995
To all radio amateurs

SB SPACE ARL ARLS008
ARLS008 SAREX launch on Friday

The Space Shuttle Atlantis is scheduled to launch on Friday, June 23 at 2108 UTC. The mission, designated STS-71, carries the Shuttle Amateur Radio EXperiment or SAREX. Astronauts Ellen S. Baker and Charlie Precourt are both Amateur Radio operators. Ellen previously used ham radio from aboard the Shuttle Columbia during STS-50 in June 1992, and her call sign is KB5SIX. Charlie is KB5YSQ and also operated SAREX from Columbia during STS-55 in April 1993.

The crew has scheduled voice contacts with 4 school groups in the US and one in Russia. The crew plans to make random contacts with the Amateur Radio community as their busy schedules permit. Landing is planned for July 4 at the Kennedy Space Center in Florida.

The crew will operate 2 meter FM voice only, using a radio which will also facilitate a rendezvous and docking with the Russian Space Station Mir. The docking is planned to occur on Monday, June 26. The shuttle will carry two new Mir crew members (Mir 19) to the station, and return to Earth with the three Mir 18 crew members (Vladimir Dezhurov, Gennadiy Strekalov, and US astronaut Norm Thagard). This mission is the first of at least seven shuttle flights to Mir. The effort is a precursor to building the International Space Station.

Most of the SAREX activities are planned for after the Shuttle separates from Mir on July 1. The following Keplerian element set, JSC-008a, can be used to track the shuttle after the separation.

STS-71
1 99971U 95182.64126116 .00004001 00000-0 25599-3 0 86
2 99971 51.6471 85.3203 0005502 102.6430 257.5145 15.57450161 1230

Satellite: STS-71
Catalog number: 99971
Epoch time: 95182.64126116 = (01-Jul-95 15:23:24.96 UTC)
Element set: 008

Inclination: 51.6471 deg
RA of node: 85.3203 deg Space Shuttle Flight STS-71
Eccentricity: .0005502 Prelaunch element set JSC-008a
Arg of perigee: 102.6430 deg Launch: 23-Jun-95 21:08:37 UTC
Mean anomaly: 257.5145 deg
Mean motion: 15.57450161 rev/day Gil Carman
Decay rate: 4.001e-05 rev/day sq NASA Johnson Space Center
Epoch rev: 123
Checksum: 260

These elements are valid from post-separation on July 1 at 1449 UTC until the deorbit burn on July 4 at 1454 UTC. Thanks to Gil Carman, WA5NOM, at the NASA Johnson Space Center for the preceding element set.

A different set of frequencies will be used for this SAREX mission. The astronauts will operate split, transmitting and receiving on separate frequencies. Please do not transmit on the shuttles downlink frequency. The downlink is your receiving frequency. The uplink is your transmitting frequency. The FM voice downlink is 145.84 MHz. The FM voice uplinks are 144.45 and 144.47 MHz. The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the luck of the draw. To avoid causing interference to other stations transmit only when the shuttle is within range and when the SAREX station is on the air.

Send reports and QSLs to the ARRL Educational Activities Department. Include the mission number, date, time in UTC, frequency and mode in your report. You must also include a self-addressed stamped business-sized envelope if you wish to receive a card.

>when in San Diego, and vice versa. No bickering there.

I don't have any arguements here, but one question...
what frequency is your repeater on, while you are inviting?

>Fact is, if the FCC gave a rat's ass about this hobby they
>would take a look into the practices of coordinating
>bodies. But they don't have the time, money or desire. They're
>too busy looking at ways to market spectrum.

True
>
>And while on that subject...
>
>Think of how VALUABLE the UHF spectrum is. Why, the FCC could
>auction off our channels for millions of dollars to private
>concerns.

This is true too, if it where not for the fact that the 440 UHF
portion of the band is for RADAR and we are secondary users
of the band.

>
>What...you don't think they've already thought about doing it?

Unless the radar is moving the 440 band is safe for hams.

5604. Use of CB in France

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-22 00:00:00 UTC
From: jgryan@aom.bt.co.uk
Message-ID: <jgryan-2206951107290001@jryan.aom.bt.co.uk>
Source record: 244030

I know that this is probably the wrong group to post this question - but I cannot find anywhere else!!!

I am going camping in France for three weeks this summer (lucky me!!!) with my girlfriend & we are driving with 2 other couples in 2 other cars!

We wanted to keep in touch as we are moving about so we had two options :

CB's

or GSM Phones

As the phone's are bloody expensive we opted for the CB's!!

I have heard that if you have a car cellphone (analogue) of the UK variant you should not use it in France because the frequency bands encroache on some of the Emergency services bands.

Does this apply for CB's which have been bought in the UK?????

(I know they are in the KHz range but some areas might use these frequencies)

Can anyone help me????

please answer to my e-mail address which is :

jgryan@aom.bt.co.uk

Thanks

Johnny Ryan

A vertical half-wave dipole immediately comes to mind. Five minutes
to make, and five minutes to string up.

5606. Re: Lack of SCRRBA Meetings

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-22 00:00:00 UTC
From: rwilkins@ccnet.com
Message-ID: <3sbhns$43l@ccnet3.ccnet.com>
Source record: 244032

James Reese (jreese@neosoft.com) recently wrote
in <3rsoio$dqf@uuneo.neosoft.com>:

: If this were true why would SCRRBA bother with all the other repeaters?

We are dealing with market perceptions in southern california, and while
you and I may dissagree with these perceptions, they may be true.

: Cactus only has 13 radios in all of southern California. Yes, many of
: SCRRBA's people are Cactus members, but what does that have to do with their
: coordination efforts? SCRRBA may have started with Cactus, but it does more
: than that now.

Who cares if some club has thirteen radios. If the perception of those in
the market is such that when that club wants fourteen radios, they have a
fast track to coordination. The perception is enhanced each time someone
on the inside gets a second channel while new folks with repeaters have no
apparent way to coordinate onto any channel.

This happens in all conjested amateur repeater markets. Obviously the 2
meter and 222 coordinators have an easier time because the perception of
the market is those bands are full. 440 may be as full, but you can't
convince me of that fact by reading the corespondence in these groups.

You don't see folks in the Bay Area complaining about coordination on 440,
because the perception of everyone is the band is full. There are many
active well used repeaters both open and open to membership operating at
all hours of the day and night. I ask travellers what they think of Bay
Area 440 repeaters and always hear the same answer. "Bob I have never
heard so many repeaters on the band anywhere." Travelers from the south
land tend to agree. The same voice on thirteen frequencies only counts as
one activity and tends to ware thin once the novelty cools off.

Lets face it, the new hams talk a lot and want to be a part of the
activities that are available in clubs and smaller groups. Many of our
large clubs have repeaters on each band with different activities going
on each repeater. Many 2 meter clubs have installed open 440 and 1280
repeaters so the members have a second or third place to talk.

As long as there is good open amateur activity on the band the perception
is always positive. Forty open repeaters crowded onto eight channels
would never work in our area.

It's not just ham equipment. Virtually every goods retails in the UK for the same number of pounds as the equivalent goods retail in the US in dollars. There was a lot of press coverage recently about the price of CDs. 14 USD in the States and 14 GBP over here.

>..>is very expensive. The overhead is monstrous just to open the door, before you

>..>higher than ours so maybe that's part of the difference, etc. No, I doubt that
>..>the ham store dealers in London are driving jags or bentleys. Hmmmmmmm?

General infrastructure costs here are higher. Petrol is currently 0.50~0.65 GBP per litre (from unleaded to 4-star, and varies around the country) so distribution costs are greater. Labour's dirt cheap though since the unions were emasculated.
>..
>..Remember that the British amateur market is much smaller than ours. There
>..aren't any 800 dealers to spawn price competition, and the distributors
>..rule with an iron hand in setting retail pricing

Not only that, the UK market is more specialised. Ham equipment has to be customised if only to work with 50 Hz, 240 V mains supply. But as in car pricing there is a tacet agreement by manufacturers to limit distribution to friendly retailers and so keep prices up. After all we are a capitalist society with all its downsides.

5610. Proposed Vanity Call Fee Increase

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-23 00:00:00 UTC
From: USCG TELECOMMS <gttm@cais.cais.com>
Message-ID: <Pine.BSI.3.91.950623124510.29126A-100000@cais3.cais.com>
Source record: 243736

A Bill introduced by the House of Representatives on June 22, 1995 (H.R. 1869) to extend authorization of appropriations for the FCC for fiscal year 1996 would impose a lifetime fee of $150 for a vanity call sign and eliminate the annual regulatory fee. The current regulatory fee for vanity call signs is $70/10yr and will decrease to $30/10yr on Sept 18, 1995. Simple math (and your age) will tell you when to apply for a vanity call. The Bill also would leave it up to the FCC to eliminate ship radio licenses but would not allow delicensing of amateur radio.

>research that conclusively supports this "fact" that no ham has
>ever had a life-or-death emergency where the timely communication
>of information was required, but all the same I'd prefer you not
>speak for me, OK?

The discussion centers around HF privileges with or without code.
I'm challenging Shawn's exotic N-ary coherent FSK. So Dana, you're
on HF and you have life-or-death traffic to pass and you have only
a choice of either using BFSK or CW, which will you use?

Bzzzzzzt. Time's up. You lose. And so does your emergency.

>Considering you've flamed people for presenting opinion as fact
>in the past, I'm very surprised you're presenting these "facts"
>as anything but opinion.

You read them out of context. They're facts. I'm still waiting for you
show me an HF xcvr without CW capability. You can't. So once again,
every HF ham has CW capability at his fingertips.

Thanks for participating!

>> [...]
> [...]
>Use all the filtering DSP algorythms you like. Characters will be missed
>as the machine has to re-adjust itself while conditions are changing.

What's to prevent the machine from taping the incoming stream and
"copying behind" in the manner of any good CW op? There's nothing in
the problem statement that says the machine only gets one chance at
the data and has to get it on the first try.

>This is aside from the characters that would be missed when tones become
>non-existent...as with in the case of a human.

And the human will ask for a fill or use a Markov approach to guess
the most probable continuation. The machine can do those things too.

And then there are more than a few formal schemes for `filling in'
missing data in digital streams. Reed-Solomon, Golay, and Hamming
codes come to mind. Just because these are too difficult for an
unassisted human operator doesn't mean they aren't powerful and widely
used.

Every single Japanese radio I've owned has needed a mic gain control. The
only Japanese radios I've owned that had one were the Icom IC-37A and the
IC-47A. In all of my other Japanese radios I've had to put a resistor across
the mic to calm down the mic gain.

Most of the Japanese radios have terrible audio because the mic is
over-driving the limiter...one of the many reasons I use a Motorola radio in
my car...

equivalent of the "big KW/beam" guys go away?

>Dave, Jim, Mr. Maynard, are all frequency coordinators. They have
>reflexively, in my opinion, jumped to the defense of their fellow
>coordinators at SCRBBA.

We may have jumped to the defense of SCRRBA, but it wasn't done reflexively.
We understand the nature of the problem because we have seen both sides of the
fence. You have not been a frequency coordinator, so you don't understand
what the coordinator has to do in order to perform the job. The job isn't as
simple as it looks from the point of view of the "average ham".

>But I don't think that their point of view
>represents the average ham in southern california, who is for the most part
>locked out of the 440 band, which should be a public resource of the ham
>community.

Who said our view did represent that of the average ham? I certainly didn't.
I understand why SCRRBA does what they do. Whether I agree with their methods
isn't important. Any coordinator will face the same issues SCRRBA faces.

Would anyone go for a plan like commercial broadcasters live with
that would make them compete for frequencies with newcomers at some
regular intervals? Such an arrangement could allow for the cost of
a repeater by giving the owner a known interval in which he would
not have to worry about losing his freq pair. It could provide some
public forum for those who may think his stewardship of that
precious resource has been less than appropriate. The "I was here
first!" logic just doesn't quite cut it.

SCRBBA does not make the radio "closed". the trustees make them "closed".
SCRBBA is probably guilty of poor communication more than anything.

That is because they are not on the front panel anymore. They are usually
an internal adjustment. To properly adjust the mic gain, it is usually
necesary to remove the covers and make the adjustment. Sometime it is
necasary to make a componant change.

>
> About the only way to overdeviate most radios nowadays is to open the front

"non-User-accessible". Every thing in a radio is "user-accesible". Unless you
consider it an "appliance". A properly adjust and designed radio will not over
deviate even while screaming into the mic.

> How old is your gear, Dave?

Funny you should ask. My old Radio's don't have mic gain controls. But all
my new ones do.

There is no shortage of frequenc pairs. You or your friends have stated
that fact several times. We have been told to take our "closed 440 radios and
move to other little used bands. Therefore I must conclude that there are
still pairs available on other bands. If money, technical abilities and
motivation are not a problem for you and your friends, then the band should
not be a problem.

I have the same problems at home. A ball sits on the floor for hours.
Then my 13 yr. old picks it up and starts playing with it. Within a short time
the 8 yr. old wants it. So then I have to tell the 8yr old to go get another
ball from the toy box. But he does't want another ball, even if it's better.
He wants the one his brother has. Why can't my 8 yr. old just go get the
other ball? I don't really know other than it seems to be human nature.

The difference between you and my 8 yr. old, is that I can tell him
to go to his room and be quite.

Why is it we should move on to other bands, but you can't? I must assert
that if there are really all these resources the other little used bands would
be filled with radios.

>
> Therefore, the bands should be coordinated to serve **all** amateurs.
>
I do not consider closed vs. open a coordination issue. The trustee can
do what he wants, as long as he stays within FCC rules and other conditions
his coordination was based upon.

There are however two times that I look at a new applicationin reference
closed or open.

1. I look at the closed/open field so I can enter it into the database.
2. When Co-channeling I try to keep closed co-channeled with closed and
open with open.

All aplications are first come first served basis. As it was in So. Cal.
Unfortunatley for you, the first ones that applied, put up closed radios.

Don't forget I still strongly agree with you on the paper repeater issue.
SCRRBA deserves some criticism there.

> Dave, Jim, Mr. Maynard, are all frequency coordinators. They have
> reflexively, in my opinion, jumped to the defense of their fellow
> coordinators at SCRBBA.

I defend SCRRBA when you attack them directly for making 440 "closed".
The trustees made that decision. I don't defend them on communication.

> But I don't think that their point of view represents the average ham
> in southern california,

My view is based on my experience as a trustee, owner, sponsor, and user.
I don't expect to share points of view with the average ham in So. Cal.

> who is for the most part locked out of the 440 band, which should be a
> public resource of the ham community.

A park is a public resource. If get there and set my ice chest on a
picnic table, I lay claim to it because I was there first. When I leave
it will be available to whomever. That doesn't prevent others from showing
up and using the playground or finding another table. They just are not
welcome at my table.

>But I still have right to voice my opinion. And looking back on
>this I probably should not have posted anything because I have
>not lived in California for the past 4 1/2 years.

I would not say that -- sorry to give that impression. If need be,
I stand corrected

>Regarding whatever information I have obtained via my friends it is
>accurate. They are active on 440.

I'd be interested in knowing which repeaters are involved.

>I do not have a problem with removing a repeater's coordination when
>it is not being used.

That's exactly the point. I hope I'm not making it sound as though ALL
440 repeater pairs are being ill-used. Just that there's a lot of pairs
on the band, probably the second-easiest band to obtain cheap equipment
for, and it should -- and could -- be much busier. Asking why that is,
the only thing I can come up with is that there are an overwhelming
number of people who think it's their private band, which they want to
keep secret and exclusive.

Funny, I don't see this problem on 220 in So Cal -- it can be a pretty
inviting band to new hams, with quite a few open repeaters, yet
equipment is MUCH harder to come by than it is for 440. Some ham
manufacturers have dropped 220 radios from their line entirely, probably
since the band is inactive in almost all non-major cities and because of
the advent of the no-code Tech license.

So if you're not in LA or NYC, I guess you can have your own private
repeater, but it's really hard for me to swallow such a repeater on
2m or 440 in the Southern California area.

>>The other point is that specialty systems with autopatch control and HF
>>links designed for the use of the few should move to the bands where
>>there's more room -- 1.2 ghz, 900 MHZ, 2.4 ghz, etc. The 440 band has
>>too much potential for widespread, basic repeater communication among
>>the majority of the region's hams to be reserved for those lucky enough
>>to coordinate their frequency pair twentysomething years ago.

>Why does it have to move? Why can't the new systems go up to those bands?
>What is wrong with those other bands for widespread basic repeater use?

What is wrong with your reasoning is that leaving the specialized repeaters on the bands that can be used with inexpensive and widely available radios only serves to keep more hams from becoming active on repeaters. Leaving those bands for the few, and putting repeaters for `the rest of us' on bands where the equipment is rare, is counter productive and will only leave THOSE microwave frequencies ill-used as well. Then we'll have two bands poorly used.

The point: it's the specialized users who should be forking out $900 for 1.2 ghz HTs, not the newer hams (and I've been licensed since '89, so I want to give the newer licensees the benefit of the doubt).

I think the whole point is that, for the 440 band, a repeater's coordination should be dependent on whether it's of service to a large number of hams, and not just because it's been there for decades.

Broadcast stations have to prove they're serving the public interest. I don't think it's too much to ask that repeater stations also serve the public interest -- both in public service and for general communications in the ham community.

If there were an infinite number of frequencies for repeaters that could be used by most hams, I'd say, `anything goes,' but in a dense community like Southern California, the amateur radio service would only benefit from growth -- and more repeaters for new hams to use is what can fuel that growth and make the service better.

New blood is what keeps amateur radio going, and I think an active 440 band would certainly serve that purpose and make hamming more interesting for everyone involved.

The way to get the ARRL to change what it's doing is to buttonhole your director. If you can get a lot of members to agree, and get them to bug their directors, it'll be more effective yet.

But I'll be lobbying *my* director to keep the publication arm. Without the money from the publications, the ARRL would be able to do less in the way of membership services and lobbying, or would have to make a major increase in dues. Just who would this benefit, again?

>buying used equipment. What should I look out for, etc., etc.?

Ah, you've discovered one of the many disadvantages of starting out
by buying a specialist's tool. A HT has rather limited application,
and you've already discovered some of its limits. If you had a rig
with decent power and performance, you could do some simplex work
at longer distances.

Its unlikely you'll be able to work satellites with a dual band HT.
The only one that allowed FM voice is now gone, and the others need
a SSB radio on at least one of the links, and/or need more power
than a HT can provide. If you are thinking of satellite work, and
it is interesting and fun, then a multimode rig is your choice,
along with some decent steerable beams. The FT736R is an excellent
choice. In your situation, mounting the necessary antennas may be
a problem, but due to the fact that they have to point mostly up,
and due to the fact that they are fairly physically small, it's
very possible to take them out portable somewhere and setup with
a simple tripod on the ground. You can aim the antennas by hand
and work with the radio in the car. I've done this many times.

You could upgrade to an HF license, but you'll find that of surprisingly
little value unless you're into gaming. Dxing and contesting fairly
dominate most of HF. There is some ragchewing activity, mostly on the
lower end of HF, though some on 10 meters as well, and some interesting

data transmission work being done, but mostly you'll just be skirting the edges of pileups from kilowatt monsters intent on collecting postal cards. You'll need good, large, antennas as well. This may be a major limitation in your situation. (Note, however, that modest rigs can yield surprising performance on HF due to the boost given by ionospheric propagation, and mobile operation is possible, though with a definite reduction in antenna performance. You can work the world with a modest setup, but you'll have to operate smart to do it. That's not a bad thing, and many people enjoy it.) I'm very fond of the IC-735 for HF operation. While that rig is now discontinued, many good used ones are available.

Most of the interesting action on 6 meters is via SSB, so a FM rig is of limited utility on 6. Again you want a capable radio, not a HT, and you'll want good antennas. Mobile operation is again practical. However, 6 remains very much a specialty band, and I'm afraid you won't find it very interesting most of the time.

I'd suggest your best course is to buy that all-mode VHF/UHF radio, basically anything but Kenwood would be my recomendation. This will allow you to do satellite work, terrestrial SSB, and still do FM for repeaters. Add a pair of steerable CP beams, and you'll be well equipped for many different types of operation. The multimodes are fairly big for car mounting, but it can be done. The FT736R holds 3 band modules, so you can get on 3 different VHF/UHF bands and discover the interesting properties they each have to offer, even ATV on 1.2 GHz. This is one of the more flexible approaches to amateur radio, but some cleverness and skill are still required to do well.

Buying used equipment is smart, and very cost effective. You should familiarize yourself with all the various radios. Back issues of QST are good for reading reviews of the various radios. And talking to others who have used the rigs is also good. That can stimulate some good conversation on your local repeaters. There are some lemons out there, and you probably should steer clear of the tube type boatanchors unless you enjoy working on them, but most late model rigs will be perfectly servicable. When you do make a purchase, make sure everything works, and make sure the manuals are available. Having a friend who is knowledgable about the particular radio along with you can be a big help. Don't be afraid to haggle on price. Asking prices are rarely firm, and you can likely save a good bit of money dickering with the seller. It can help if you have trading material. Many hams like to swap gear regularly, and if you have something they find interesting you may be able to get what you want at a bargain. Be smart, learn the market, don't necessarily buy the first rig that strikes your fancy.

Remember that the British amateur market is much smaller than ours. There
aren't any 800 dealers to spawn price competition, and the distributors
rule with an iron hand in setting retail pricing.

Who said anything about making them go away? Not I. My suggestion is that we simply coordinate open repeaters on top of the seldom-used ones (most of them) and require both systems to utilize CTCSS. The closed system will not be able to run the open one off the freq because **both** will have been coordinated.

Just a thought, Jim.

You may be right that I don't know as much about the nuts and bolts of
coordination, Jim. But I do know how to measure **results**

Results based management, applied here, indicates that SCRBBA fails, while
TASMA, which has the interests of most hams at heart, succeeds.

Although you have continued to defend SCRBBA, you have also indicated a lack
of agreement with their methods. I therefore conclude that your defense is
half-hearted.

Not surprising. I think it would be hard to be gung-ho in their corner...

Am I wrong, Jim?

Well, yeah, Dave. That's right. Since two groups I've been a member of
tried for years to deal with them to get coordinated, and since they control
the coordination of a largely closed band, that's right.

That's only been posted on this thread about a million times.
(Well, a dozen anyway :-))

: like to be on the receiving end of the kind of flame posts that chaps like
: Rory Burke like to blast out. :-)

Come on Roger. you love the attention ;-)

You brought up an interesting point. There are a lot of coordinators here
from all over the country. Some even try to support the SoCal coordinators.

Why are the coordinators from your area, where internet access is
virtually free, or at the most $20.00 a month unlimited time, missing from
this thread? I heard that Tasma has a room on AOL, sure does us a lot of
good if you are not on AOL.. Where do the 222 and 440 coordinators hide?
Surely they must have some sort of special fire wall flame proof system
installed.

Don't tell me they are on a private closed unix network, that doesn't
talk to the rest of the known world. Let me guess, they use touch tones
for a signalling protocol rather than tcp/ip.

Roger you should challenge your local coordinators to show up here, rather
than let them hide behind their private closed radios. I am sure they can
answer some of our questions. I would not care if they hired some pr firm
to front for them, at least a diolog could get started.

>QRM'ed.

Not true. There was a satellite reachable (barely) by HTs. It's gone
now, but others may appear in the future. And of course there's the
Shuttle and MIR. Both *can* be worked with HTs, though good antennas,
or even a power amplifier, will help a lot.

I agree, however, that a HT would be the worst choice. It's a
specialist's tool, and not well suited to most hamming.

Hams are limited to 1.5 kW output power on the microwave bands, just as they are on most other bands. And yes, it can be a hazard if not treated properly, just as can DC under the wrong circumstances.

> Please post any comments on this since I posted this fella' back stating
> my proposed concern of being burnt by 10 kilowatts aimed my way on
> the highway whilst some dummy tries to jam a radar gun.

Well, don't get too excited. In the first place, equipment to generate that level of power on 10 GHz is far from trivial to get or operate. Even a 300 watt TWT amplifier is a challenge to find and operate. In the second place, the inverse square law protects you at any reasonable distance as the energy per square centimeter spreads over larger and larger areas. It's power density, not absolute power, that is of concern. The primary danger is looking directly into the feed horn from a very close distance (a few inches to a few feet for most rigs). There, the power hasn't had a chance to spread, and the power density is very high. Once you get out a fair distance, the power density drops to safe levels very rapidly. This isn't some sort of death ray.

You can liken this to a light bulb. Very close to a 100 watt bulb, it's almost intolerably bright and hot, but you don't have to get far back at all before the temperature isn't noted and the light cast doesn't seem very bright. This is the result of the inverse square spreading of the radiation. Same thing happens at RF.

The old reliable J-pole works fine. Just scale the dimensions from the commonly posted plans for a 2 meter J-pole to 6 meters and you're set.

Yes my post did not pose any questions. But it did not contain only
personal innuendo.

I said:

"I really wonder what you are like on the air and on which repeaters
you hang out on. Yes this is guilt by association but it does apply
with bad hams."

End quote.

Did I use strong words? Yes I did. And I have already apologized to
you Roger via e-mail. That one statement regarding guilt was
personal. And I am now apologizing for it here in the group.

I was trying to raise a point that until recent posts by others seems
to have been missed. And that point was some of the reasons why the
440 band is the way it is. I was also trying to inform people why
some hams moved up to 440.

I also brought up my background to let people know that I was familiar
with 2 meters and 440.

Steve,

you have a good point regarding that I am no longer in the state.
But I still have right to voice my opinion. And looking back on
this I probably should not have posted anything because I have
not lived in California for the past 4 1/2 years.

Regarding whatever information I have obtained via my friends it is
accurate. They are active on 440.

>Perhaps you are right: your friends moved to 440 when they were ``driven
>away'' from 2 meters. Roger's point is that they've seemingly lost
>interest in actually using the frequencies the coordinators have

>to coordinate their frequency pair twentysomething years ago.

Why does it have to move? Why can't the new systems go up to those bands?
What is wrong with those other bands for widespread basic repeater use?

And to be fair I would be interested to see usage statistics for
2 meter repeaters.

Would you have a repeater coordination yanked if it had been on the
air for many years and was in use?

Get through what, Tony? I've done all the manual Morse I ever care
to do. I handled thousands of messages back during the Vietnam era
on Morse. I know how low the throughput is. When we finally wised
up and went to more modern methods, traffic flowed much quicker and
much better. On a good day, we could move booked message traffic at
an average throughput of around 12-15 WPM on Morse, most days the
average was much lower. The voice nets averaged higher message counts.
Even on RTTY, we were getting average throughputs of better than 30 WPM,
closer to 60 WPM on good days. With more modern digital methods, things
are much better, fills are automatic, the better modems can follow signals
right down into the noise floor (and a bit more), and there is much less
operator fatigue. There's a good reason Morse has been generally abandoned
by everyone serious about communications, it doesn't work very well.
Continuing to foist it on amateurs is a disservice to the amateur
community.

>or whatever).

It's input to the final stage, like it used to be with hams. A Class D
final can easily do 90% efficiency, so this is no big deal. Getting
the antenna high doesn't do much for you at 160 kHz, everything is
groundwave anyway. "High" in this case would be a 1/2-wave or greater,
or about 1.8 km above ground.

>I *think* it's possible to operate under the license-free regulations (what

Part 15. You're right about LOWFER radios, TRF receivers with digital
correlators rule. Most everything can be wirewrapped on perf board
if you want, though the front end is more like a good magnetic phono
preamp and good shielding is a must.

>Any help will be gratefully appreciated.

NVIS antennas are what are commonly referred to as "cloud burners",
IE any antenna with a very high angle of radiation. A low mounted
horizontal loop is prototypical of this type of antenna. You don't
see much mention of this type of antenna in the amateur literature
primarily because that's dominated by Dxers who want the lowest
possible angle of radiation. Just study what they do, and do the
opposite.

Right in the first part about market size. And a second point not
mentioned is that European specs on VHF (bands & tone burst repeater
access) make U.S. spec. kit less of a competition. But the notion of an
"iron hand" of distributors is quite untrue. The distributors'
wholesale pricing sets a floor (at zero mark-up) but there is nothing
further than that going on in the UK market.

Sorry about Dan, but the answer is NVIS - near vertical incidence skywave. We use it all the time for emergency communications. Great communications from 1-400 miles - forget topography. What's more, there is an outstanding review article by Ed Farmer AA6ZM in the January 1995 QST on page 39 that explains it for you. Hope this helps you and your wife!

Why not just have open systems SHARE with closed and private system on
the same frequency pair? This would be the quickest, when compared to
what I suggested a month ago about starting off from scratch.

So far groups from both sides claim that there is a lot of dead air
space on the 440, if that is the case why can't thow a few more
repeaters on the frequency?

The trustees are the membership, Dave. Only trustees can be members.

>
> A park is a public resource. If get there and set my ice chest on a
>picnic table, I lay claim to it because I was there first.

Parks aren't frequency spectrum, old chap. Poor analogy. Try telling, say KFWB that they can keep their freq until they get tired of it. They'll tell you that the FCC makes them justify their use of it, as being in the public interest, on a regular basis.

Parks generally require that you leave by 10PM. Consequently, turnover eliminates the need for such justification.

I actually sense that your support for SCRBBA, like Jim Reese's, is halfhearted.

Or maybe I'm wrong about that?

> Get through what, Tony?

Element 1(C)

> I've done all the manual Morse I ever care
> to do.

And that's a choice you're free to make.

BTW, if you wanted to petition for a code-free method for the holder of an Advanced Class license to gain access to say 3.750-3.775 and 14.150-14.175 etc., and also to gain certain added VE powers WRT theory papers, I'd probably support you.

However, whether that just means Element 4 (B) is something I'd have to think more about. One major difference between the code tests and the theory papers is that you really must know something about code to pass.

The situation of published pools of far too limited depths makes memorizing answers to the theory papers with little or no understanding far too easy, in my opinion. Of course, in your case that would not be an issue, but I guess we are discussing the general case and not a special Gary rule.

This is the kind of discussion best suited for r.a.r.policy, which is why I don't read that group :-)

5661. GB2RS News 25th June 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-23 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <803929687snx@llondel.demon.co.uk>
Source record: 243813
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

In a Gazette notice published last Friday, the Radiocommunications Agency announced licence changes which took effect on the 23rd of June.

Two changes affect all classes of licence, including Novice. One allows the RA to publish the callsigns of amateurs who have requested that their particulars be withheld, thus ensuring that callbooks can show a comprehensive list of callsigns issued. The other permits the RA to publish the names and callsigns of amateurs who have had their licence revoked. These measures should help counter piracy and spectrum abuse.

A third change, which concerns only the full Class A and B licences, updates the list of CEPT countries.

The full text of the Gazette notices can be found in the July edition of Radio Communication which is due to be posted to all members this week.

July's RadCom also contains the text of the RSGB's response to the recent CEPT Detailed Spectrum Investigation which recommends substantial changes, including some losses, to the VHF and UHF amateur bands. All RSGB members are strongly advised to read this.

Anyone not a member of the RSGB who wishes to receive a free copy of July RadCom should send an A4-size self-addressed envelope, together with 43 pence in stamps, to RSGB Headquarters. Send it to: John Davies, July RadCom, RSGB, Lambda House, Cranborne Road, Potters Bar, Herts, postcode EN6 3JE.

>casual mobiler make lots of qsos as you claim to have done.

My experience differs from your so-called "common knowledge". I simply came up on active channels and asked if the system was closed. Sometimes I was told to go away, which I did. Usually, I was told it was closed, but talk anyway. I think it's a question of attitude.

People who come up on closed systems and demand to talk because it's their "god given right as a ham" usually get asked to leave. As I've said before, most closed system trustees simply want you to ask permission before using their station.

>Secondly, you'll forgive me for thinking that it's a bit much for you to
>have strong opinions based on visiting out here once in a while.

Sorry. My opinions are based mostly on my experience as a frequency coordinator, not as a California residence. I've been there several times, and my experience was not at all like you've described on UHF. I also did a little research before operating, something most hams do not do.

>Thirdly, I'll say it again. I'm active on many 2m repeaters, have a lot of
>friends who operate on them, and I don't care for people referring to them
>as CBers.

That's my opinion of 2 meters. I'm sorry you disagree.

>I've been to Texas, Jim. It wasn't Disneyland.

..I never said it was. I don't operate 2 meters here for many of the same reasons.

5665. CW yes or no?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-23 00:00:00 UTC
From: IK2RMZ <martin.zurn@jrc.it>
Message-ID: <9506231207.AA00580@dac.isei.jrc.it>
Source record: 243817

Hi folks,

I'ld say yes because it has sure got its positive aspects.
It is my experience that a CW message gets thru where an SSB
message does not get thru. I took part in a medical emergency
traffic between Europe and South America. At first, all the traffic
was in SSB but the other day conditions went down and without CW I
would not have been able to get my message thru.

Please let me reiterate that CW is a great mode if you
have:
a) a small budget
b) limited antenna possibilities
c) low power
d) a poor s/n ratio for whatever reason

I have learned CW because I had to (in order to get HF privileges).
Now I'm glad that I had been obliged to learn it ...
It's giving me more fun than any other mode I tried.

Martin IK2RMZ

: they will be the ones who are here after the older ones have gone on.

I think you will find that it would be difficult to find even 50 people
(new hams, old hams, any hams) total that really care, even in southern
California. Most people respect the rights of someone to go off and do
their own thing and just don't feel it's that big a deal. There are a few
like Mr. Buffoon-ington who just want to stir things up for the fun of it,
but in the scheme of things, caring about closed repeaters doesn't rate
all that high with hams.

Now let me back out lest you-know-who add me to his list of
those he subjects to pusillanimous diatribes.

Dave, over 90% of the repeaters on 440 out here are closed or private. Even people who share your position have acknowledged that. Sounds like "unchecked proliferation" to me.

As far as what people think, get a conversation going on any open repeater out here about what people think of the situation on 440, and you will find very little support for SCRBBA and its policies. Most hams out here feel like I do. They resent having a whole band locked up.

Just because a few loudmouthed jerks like Rory Burke come out of the woodwork here on Usenet doesn't change that.

My point, Dave, is that you have repeatedly brought up old issues that were discussed and settled in this thread to everyone's satisfaction. I'm not going to keep covering the issues of the FCC's permitting closed repeaters, my personal involvement with several repeater clubs (that you were obsessing on) and other topics that we've already covered. Save me the trouble of responding to stuff we've already talked about. You say you've read the old posts, but your questions don't indicate that.

Is that specific enough, Dave?

How the heck old are your radios, anyway? I haven't seen a mic gain control on a VHF radio since my old Gonset "one-eyed monster" Communicator back in 1969. Are you sure that you mean that?

About the only way to overdeviate most radios nowadays is to open the front panel and find the non-user-accessible pot and deliberately mess with it. I've never heard about anyone overdeviating unless they were screaming into the mic. Maybe you fellows have that trouble in Arizona, but I've never heard about it out here.

How old is your gear, Dave?

Incidentally, Dave, I'll say it one more time. I think it is
extraordinarily discourteous to insult the thousands of hams who are active
here on 2 meters. I've been all over the country, and I maintain that our 2
meter operating standards are second to none.

I think you are basically trying to justify SCRBBA's exclusion of most
amateurs from 440 on the grounds that they just aren't up to SCRBBA's high
standards, etc., and don't deserve to be there. Doesn't wash.

>(Omigawd, am I really posting to this thread?.....)

John, I wish there were. I don't know of one. I will point one thing out, however. Most of the posts on this thread that take the position that you and I do originate in Southern California. Most of the threads taking Dave and Jim's position originate from out of state, and are mostly coordinators. Dave and Jim are both coordinators, and not too surprisingly, they support their fellow coordinators at SCRBBA. And I'm taking alot of flame mail basically because these out of state coordinator types are a lot more motivated to expound on a thread like this than are your average hams. Most hams aren't on usenet, and frankly, a lot of hams, understandably, don't like to be on the receiving end of the kind of flame posts that chaps like Rory Burke like to blast out. :-)

However, I think you are correct. It is well known out here, regardless of what the out of state types want to think, that 2 meters, as coordinated by TASMA, is a model of what 440 **should** and **could** be, but isn't.

Apology accepted Marc. No hard feelings.

I was also trying to inform people why
>some hams moved up to 440.
>
>I also brought up my background to let people know that I was familiar
>with 2 meters and 440.
>

You are entitled to your opinion, but consider. Is it really reasonable for a small group to say, "hey, we don't like the crowded conditions on 2 meters" (lotta hams getting licensed these days, fellas!) and then lock up a big band like 440 mainly for their exclusive use? This solution cannot work simply because it by definition will only work for a select few.

The bands should be coordinated to benefit **all** amateurs, not just a few. I'd like to have my own 20 meter phone frequency. I have trouble competing with the big KW/beam guys. But obviously that isn't in the cards either.

The main point I'm making is that there is no shortage, none, of people with the technical ability, financial resources, and motivation to erect repeaters. The shortage is frequency pairs, not providers. This may have been different 25 years ago; probably was.

Therefore, the bands should be coordinated to serve **all** amateurs.

Dave, Jim, Mr. Maynard, are all frequency coordinators. They have reflexively, in my opinion, jumped to the defense of their fellow coordinators at SCRBBA. But I don't think that their point of view represents the average ham in southern california, who is for the most part locked out of the 440 band, which should be a public resource of the ham community.

In article <1995Jun23.000522.29694@ke4zv.atl.ga.us>,

A bit hard on HF, aren't you Gary? On the digital modes, AMTOR and PACTOR, ragchewing with 100 watts pretty much predominates. I've had hour-long qsos with people in Japan, Australia, NZ and lots of other places. And all the digital freqs are in the general class band, so you don't need an extra or advanced to derive full enjoyment from that aspect of the hobby.

I find that ragchewing on 20, 15 and 10 gets better when the sunspots perk up. Right now, and for the next 2-3 years, conditions will usually be too poor for easy ragchewing with a small station. (Except on 40 and 80 M).

Just my $.02.

well, maybe, if we handicap the machine such that we don't use error correction/detection codes in the actual transmissions. if you have done the job properly, the digital system will retry and adjust and retrain until it comes up with a workable solution -- see how your modem does that today. you may talk to it at 38400 but it figures out that maybe the connection is only good for 1200 and adjusts. that's backed up with "reliable connection" protocols on top of your raw data transmissions (again if the other end supports it, of course).

things have come a long way from the days of the ST-6 and 60 mA current loops directly connected to the printer magnets.

no doubt canada's different, but in the US there's nothing in the rules that sets up amateur radio as a "recreational hobby". we're supposed to provide a non-commercial voluntary communications service to the public in return for being able to experiment and such.

part of this interest in better, more reliable communications comes from folks that are trying to supply such a service.

: Someone in the club mentioned that the DoD holds a patent on NVIS, but I
: can't confirm that. I do know that this type of antenna design isn't
: discussed in the popular antenna handbooks.

: Any help will be gratefully appreciated.

: Jim

I'm going to go public with what I sent Jim privately.

The most popular "NVIS" antenna used around these here parts is a
DIPOLE at about 18" above ground. Even if the gov CAN patent things...
I don't suspect they can patent a DIPOLE at any height! The concept
is, how shall we say it...prior art...by about 75 years!

Any antenna of the omni-directional variety placed withing a foot or so
of the ground will give you the affect you are after. One person recommends
using a simple dipole on traffic cones. You get an ideal height with a
cheap durable support system that can be fielded anywhere.

i would suggest that a single CW speed test is all that's required.
that takes care of the applicants basic ability to handle code.
I could even be convinced that 2 tests could be used. (novice/all).

as it stands today in the US, the code test doesn't test for operating
skills (when do you use KN? what's the proper form for message traffic?
how do you make sure you are zero-beat with the other station? and so on.)
or that the applicant can actually *send* code by hand.

5682. Comm. supt. needed in Dallas for solar car race

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-23 00:00:00 UTC
From: ham@msg.ti.com
Message-ID: <ham.8.03AFFAA0@msg.ti.com>
Source record: 243834

The Winston School Solar Car race will take place Aug. 4, 5 and 6 for six hours each of those days (Fri thru Sun). This race is sponsored by Texas Instruments, and the TI Amateur Radio Club K5OJI will be organizing communications support for the race.

If there are any radio amateurs in the Dallas area that wish to assist K5OJI in this effort, please let me know. The kind of support we may need are hams at the different race checkpoints, mobile operators to follow the race pack, and base stations to perhaps assist as net control operators.

The race will follow a 71 mile loop around the Dallas area. Dallas PD support has been commited by the city of Dallas, so a police escort will be in place for the race pack. Where our support is needed will be, like for example, a car breaks down during the race, and spare parts & tools would be requested by the car driver to the 'pit crew' back at the finish line - an Amateur Radio operator would coordinate that request thru net control and an operator at the pit crew location.

If you think you can help K5OJI with this community service project, please contact me, Bil Morrison, KK5AO, via E-Mail at ham@msg.ti.com, or I can be reached at (214) 575-3925. Dr. Lehman Marks of the Winston School is the race coordinator for this event. He will be addressing the K5OJI club meeting this Tuesday, June 27 at 7:00 PM. If you think you might want some more details by attending that club meeting, you will be welcomed - just call for meeting location details.

Those of you outside the Dallas area who have worked events of this type, I would encourage your feedback as to what we need to avoid to prevent a disaster, and what we could do ahead of time to make this project a success. E-Mail would be preferred.

The best, and most ACCURATE, info onthe subject of operating in various overseas countries will come from the ARRL's international desk.That really beats second and third hand opinions. I had an Australian license (VK9AM) back in '69 but today's info is today's info and the ARRL has it.

He's pretty close to right, but the ARRL isn't perfect, and there's a time lag possible. The info I got from the ARRL about reciprocal licensing in the UK was not quite up-to-date. It turned out to not be much of a problem in this case. The woman at the RSGB said she's had the same problem getting up-to-date info from the ARRL about reciprocal licensing in the other direction, also.

I don't know about VK, but I know a lot about G, currently.

SB PROP @ ARL $ARLP027
ARLP027 Propagation de KT7H

ZCZC AP95
QST de W1AW
Propagation Forecast Bulletin 27 ARLP027
From Tad Cook, KT7H
Seattle, WA June 23, 1995
To all radio amateurs

SB PROP ARL ARLP027
ARLP027 Propagation de KT7H

Solar activity has been down over the past week. On June 15 and 16 there were no visible sunspots at all on the solar surface facing Earth. Some unstable conditions were centered around June 19, but this is improving. Look for another disturbance around June 27, and another possibly around mid July.

Expect very low solar activity, but with a moderately rising solar flux for the near term. Flux value should peak near 90 around July 4 through 6.

Sunspot Numbers for June 8 through 14 were 49, 41, 67, 32, 28, 25 and 14, with a mean of 36.6. 10.7 cm flux was 84.2, 86.4, 84.4, 82.5, 80.7, 76.8 and 75.7, with a mean of 81.5.

Sunspot Numbers for June 15 through 21 were 0, 0, 11, 24, 28, 20 and 25, with a mean of 15.4. 10.7 cm flux was 73.3, 70.8, 69.9, 69.5, 71.3, 72 and 72.3, with a mean of 71.3.

Path projections for this week are from Seattle, WA and Dallas, TX to Tuvalu, T2.

From Seattle, 80 meters looks good from 0630 to 1300z, and 40 meters from 0530 to 1400. Check 30 meters from 0500 to 1530 and 20 meters from 0230 to 1130 and 1300 to 1500. The best period on 20 meters is from 0600 to 0930. 17 meters should be open on most days from 2130 to 0800, with the best possibility of a reliable opening around 0530 to 0630. On some days 15 meters may be open around 0530 to 0630.

From Dallas, check 80 meters from 0600 to 1200z, 40 meters from 0530 to 1230, and 30 meters from 0430 to 1330. 20 meters looks good from 0230 to 0900 and 1130 to 1400. 17 meters looks best from 2330 to 0630, and 15 meters from 0330 to 0500.

5687. This Week in Amateur Radio #117 (for air through 6/30/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-23 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <pszf2Zc.sanderman@delphi.com>
Source record: 243889

Here is a summary of news items covered on edition #117 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 30-Jun:

1. FCC Offers "Wish List" to Congress
2. Commissioner Replies to Proposal to Shrink the FCC
3. Officials Move to Revoke the License of a Canadian Amateur
4. SAREX Shuttle Mission STS-71 Scheduled Mission to Mir
5. State Department Asks Immigration to Admit "Space Aliens"
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. "Amateur Radio Newsline" - Edition #932 from Los Angeles
8. RAC Remains Firm in Its Commitment to CW Requirements
9. Weekly Propagation Forecast with George Bowen, N2LQS
10. Upcoming Special Event Stations
11. Occasional Delays in "This Week" Uplink Announced
12. "The RAIN Dial-up" from Chicago

Funding for the program's transmission and production expenses was provided by a grant from the Blue Ridge Video and Digital Society of Roanoke, Virginia, where "This Week in Amateur Radio" is heard on the WB4QOJ repeater on 145.21 MHz, serving amateurs in Virginia, Kentucky, West Virginia, and North Carolina. Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM or SANDERMAN@DELPHI.COM.

I used to live in Australia for 2 years, and had a VK6 call for about a year of the time.

There is a reciprocal agreement between the FCC and the DOTC (Department of Transportation and Communication). Unless this has changed, your Tech class license should get you a 'Combined' class license in Oz. This does allow some HF priviledges.

If you have time to talk to the local consulate, or the embassy, before you leave, you might be able to have your Oz ticket in hand before you leave. If not, visit the radio inspector when you get there. The license will cost you AUS$35.00 (once again, this might have changed).

You can stop into a newsstand, and pick-up a copy of Amatuer Radio Action, which generally lists some repeaters. Or Dick Smith Electronics has a catalog that used to list them as well. (I think the current ARRL Repeater Guide has Oz listings too.)

Excellent post Jeff! It reminds me of what a good friend of mine once
said. Something like, "Just because we have the CAPABILITY to do
something, doesn't necessarily mean that that is what we need to do!"

That kinda stuck with me! VIVA CW!

Sigh. Here you go AGAIN! Dana, don't you have anything better
to do than yap about CW and put it down???

Calling other hams "snot nose" and "bigot" really stinks, Dana!
Grow up fer cryin out loud! Is it the smog?

DM>>So, who are you going to communicate with, Shawn? Right now (and for
DM>>a looooong time to come), every HF-licensed ham worldwide has a CW-
DM>>capable transceiver sitting at his fingertips.
DM> ^^

DM>Really? I guess this "fact" has been pulled from the same bin that
DM>the "50% of all HF comms are Morse code" "fact" was pulled from.

DM>Oh, another "fact" from that bin you have. I guess you've done
DM>research that conclusively supports this "fact" that no ham has

and do you REALLY call this garbage of yours "respectful cerebral
discussion?" My oh my, what hypocrisy! Talk about the pot calling the
kettle "black!"

>would guess that your views on this matter would then attract far more
>attention and respect.

Don't be a snotty Morse code bigot. I'm an Extra, I use Morse code
pretty much every time I get on HF, and, for the most part, I agree
with Gary. I haven't asserted that learning Morse code causes brain
damage (like Gary does every now and again), but I have observed that

that the Morse code-forever crowd seems to prefer religious ranting and
snotty name calling to respectful, cerebral discussion. This
might lead one to conclude that learning Morse code does indeed damage
the brain making cerebral discussion impossible, but there are
enough examples of Extras with brains (Phil Karn, Jon Bloom, me, etc.)
that I discount the brain damage theory.

By the way, since I've "gotten through it", do my views warrant
far more attention and respect?

Airizonia?

Condor Connection? The correct name is the "ZIA Link". Maybe ZIA means Condor
in some language somewhere....

The link extends from El Paso west to Yuma, AZ - it does not go to L.A.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 JUNE AND FORECAST FOR 24 JUNE - 26 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 22 Jun
Daily Proton Fluence >1 MeV: 2.2E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 1.2E+09 (very high)
X-ray background: A4.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Jun 25 Jun 26 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Jun: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 22 Jun
Learmonth 7 2222 2311
Fredericksburg 7 10
Planetary 8 8

Observed Kp for 22 Jun: 3232 2212
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 Jun 7 Quiet to unsettled
25 Jun 7 Quiet to unsettled
26 Jun 20 Active
COMMENT: IPS Geomagnetic Warning 17 was issued on 21 June and is
current for interval 26-30 June.

3A. GLOBAL HF PROPAGATION SUMMARY

LOUDOUN AMATEUR RADIO GROUP TO CONDUCT
OPERATIONS IN LEESBURG, VA, JUNE 24-25

The Loudoun Amateur Radio Group (LARG) will be participating in the American Radio Relay League's annual "Field Day" radio communications exercise on Saturday and Sunday, June 24th & 25th, at Ida Lee Park in Leesburg, VA. The public is cordially invited to visit and witness actual on-the-air operation. Several transmitters will be in operation, including two on voice and one on CW (radiotelegraphy).

For those unfamiliar with this activity, "Field Day" provides an opportunity for amateur radio operators to set up portable antennas and stations, operated from emergency power sources, and establish communications with other stations around the country. It is a form of competition during which stations accumulate points based on the number of other stations contacted. It also serves as practice for amateurs in setting up temporary communications and dealing with coordination and logistics problems.

If you're interesting in seeing an amateur radio station in operation and talking with the operators about amateur radio in general, please come by and visit with us on Saturday or Sunday. Equipment set-up and antenna installation will start Saturday morning, with actual operation running continuously from 2 PM Saturday until 2 PM Sunday.

Leesburg, VA, is located in Loudoun County, approximately 40 miles northwest of Washington, DC. Ida Lee Park is located on N. King Street in Leesburg, approximately 1 mile north of the center of town (courthouse).

NASA, for example, owns *lots* of patents. They commonly license
private industry to use them. For examples see the NASA Tech Journal
(subscription is available to anybody simply for the asking). NASA is a
government entity, is it not?

: > with other available technology.

: Okay, are we getting particular on the use of the word obsolete ?
: How about...CW is STILL widely used throughout the world and is still
: required by several facets of the hobby so it's no wonder it is still
: with us.

286's are still used all over the world. I wouldn't buy one today,
since it's obsolete I can get a nice 386 for about the same price. If that's
what you have and enjoy, keep using it.

: I have no other proof than setting up a challenge with only the
: equipment available to me. What equipment is it that you suggest could
: outperform a human ear/mind to decode CW in extremely adverse conditions
: ? Have you witnessed a machine decoding CW when you could not
: distinguish the tones ? Inasfar as I cannot backup my statement, can
: you ?

Well, the capabilities of the human ear are well known, and we
can set up a test with ever increasing noise. What I can do instead is
point out the best possible error rate in a set S/N ratio for a perfect
ear, and perfect equipment. Then I show a machine that does it better,
by means of a better modulation. As for CW, the machine can integrate
over multiple wavelengths, can the ear do that? If not the machine has an
automatic gain in S/N.

: I've yet to see any such filtering system with the most advanced
: algorithms programmed into it to enable a machine to decode CW in the
: aforementioned conditions.
: There is no question that technology is forever advancing and perhaps
: you will be correct.

Take a look at adaptive filtering, and a lot of the radar receivers.
There you will find methods of pulling a signal that is really embeded in
noise. An undergrad that was working with me developed an adaptive
filter that could pull a footstep out of a harsh audio noise environment.
He even thought he could get it run on a 68HC11.
: >
: > How about if we test for knowledge of the mathematics behind

: > each mode. Then I wouldn't hear as much about how great CW is.
: >

: Sure, if the math relates to electronics and/or radio theory, I'm all
: for it but I think your implication is that "math is about as relevent
: as CW in this day and age" with regard to earning ones HF privs.
: Like I said before...by all means, dump CW...just be sure that testing
: is in place to maintain a similar or better level of operator competence
: on HF. Keep in mind, the whole world is listening when you're on HF.
: Incompetent operators could be inadvertantly mess up communication half way
: around the world.

More reason for the person to understand the technology rather then
the code. If someone understands the effect of changes on equipment and
environment on propgation, then they are less likly to cause problems then
someone that just knows CW. So I think we're both saying, remove CW and
make the theory more rigorous.

: I have no doubts that there are more efficient means of data transfer
: via radio. Ham Radio is a recreational hobby and is supposed to be fun.
: CW is (or can be) fun. Nobody said that it is essential that CW must
: have a relative roll in Amateur Radio (though it does in some facets of
: the hobby). Perhaps in Commercial or Military applications the efficiency
: of data transfer is essential but not in Amateur Radio.
: The skill involved in learning it only represents the earning that is
: required to demonstrate a persons desire to gain HF privs.

Hey, keep CW as a recreation. Just don't require it for gaining
operational licenses. Part of amatuer radio is to advance the field of
wireless comm. I'm helping by dispelling the ancient myths of CW.

I almost agree with Gary Coffman's assessment of the term paper,
however, I would give the student at least a D. There is no
continuity, and he just rambles on (like Burt).

My opinion of Burt Fisher is that he just likes to stir up
trouble. I'm starting to believe he is very good at it too.
He is not sharing honest opinions, he just makes these statements
to get attention, and he has received his share. He is now a
"celebrity" in this group. That's all he wanted. Personally, I
think he made up that posting from the ZL. Nobody could be that
much of a loser. If totally ignored, Burt would go away and bother
someone else. I'm not offended by his statements because they only
apply to a small percentage of the ham population. I don't believe
his crap and he doesn't either. I only hope he doesn't give off this
cynical attitude to his students. All I can say to him is that he
missed his calling in life. He should have been a professional
wrestling manager. They get paid to spew garbage, and to piss people
off, which are two of Burt's best qualities.

I apologize for this semi-flame. Let's forget this guy and get back
to more relevent topics.

Where have all the sunspots gone?

>we have to take the good with the bad.

No we do not. That's the attitude of defending the status quo. Nothing
ever gets better if we simply accept things as they are. We must constantly
strive to make things better so that others who follow in our footsteps
will be able to stand on our shoulders and reach further than we could.
To do otherwise dooms us to the status of living history museum, forced
to re-enact the achievements of the past.

Once every white southern boy aspired to learn the fine art of slave
whipping, but few do today excepting those with sheets with eyeholes
in their closets. That's not a skill with much practical application
today. Neither is manual OOK Morse outside a very limited Klan of
backward looking amateurs.

Check it out, Hugh. You won't be able to hear a thing other than
noise, but the machine can. It's not a matter of speed, its a matter
of coherent correlation. The machine can do that for a uniform coherent
encoding completely buried in noise and interference, you can't.

The machine can't pick incoherent non-uniform OOK Morse out of the
noise much better than you can (at least not in realtime), but that's
irrelevant. It's that bad old encoding we're trying to get rid of
because it can't be pulled out of deeply embedded noise and
interference by man *or* machine. With coherent encodings, at least
the machine can copy it even if the man cannot. That a machine can
also often do it faster than any man could is just a bonus.

You have access to a library, look up Huffman codes and Golay codes.
Read up on coherent correlation. Then come back with an understanding
that if we'd wanted to design the most ill suited weak signal method
possible, we couldn't have gone far wrong by inventing OOK Morse.
It has nearly the worst imaginable characteristics for weak signal
transmission.

I did mention that there was some fine digital work going on in the
HF spectrum. That's my favored HF mode. But lets be honest and tell
it like it is to the newcomer. HF really is dominated by the Dxer and
the contester. Unless that's your thing, dodging them can be a major
hassle. Also the questioner was apartment bound, which makes HF operation
all that much more challenging because of antenna issues. It's certainly
not impossible, and modest stations can do well at times, but for a
person with only HT exposure to repeaters, HF is going to be a major
culture shock. Getting into VHF+ SSB and satellite work is going to
be much less of a jarring experience. Many new hams have been soured
on amateur radio altogether by too rapid an exposure to HF. It's a
nasty hostile environment compared to the relatively benign VHF+
arena. Jumping cold into HF can be like jumping into the shark tank
at feeding time.

And you're wrong again. :-)

The Liberty was the US Navy ship mercilessly strafed and bombed by
the Israeli Air Force, and attacked by torpedo boats of the Israeli
Navy in international waters in the eastern Med during the 1967 Six
Day War. Of course the Israeli's claimed this well planned and executed
joint air/sea attack was an "accident", but anyone who studies the matter
can see that for the transparent lie that it is. The Liberty was an
ELINT ship, an electronic eavesdropper. It was monitoring the spoofing
of Egyptian, Syrian, and Jordanian communications by the Israelis intended
to suck the latter two into the war so Israel would have an excuse for
extending its territorial claims to the West Bank and the Golan before
the US could bring pressure to bear for a ceasefire. It worked too.

The ship in the Persian Gulf attacked by an Iraqi Exocet was the
USS Stark. This happened during the Iran/Iraq tanker war. It's
possible that this was an accident as claimed, but there's a
hell of a radar signature difference between a supertanker and
a destroyer. OTOH the US was secretly backing the Iraqis in that
war and there was no reason for the Iraqis to deliberately attack

a non-hostile US warship. The Iranians also had destroyers bought from the US during the reign of the Shah, so the Iraqis may have thought that was what they were attacking. The Exocet was launched from beyond visual range, so such a misidentifcation is at least plausible.

There was no such excuse for the Israeli attack on the Liberty. She was well marked as a US Navy ship, was flying the big 20 foot US flag, and had antennas that clearly marked her as an ELINT ship, something none of the Arab nations had. The Israeli pilots and torpedomen would have had to have been blind not to realize that the ship they were repeatedly attacking was a US Navy vessel.

>to maintain its decorum and good operator behavior.

The entire concept of self-policing is false. Police have the power
to arrest and detain offenders, but as hams, we must rely on the
F.C.C. to provide that function. Given the F.C.C.'s continued
withdrawal from this role, removing *any* entrance requirements is
extremely risky.

>Testing has almost nothing to do with this other than to remove the
>excuse "I didn't know" from the offenders (which isn't a legitimate
>excuse in any event).

Most offenders are never identified, and those that are, are seldom
prosecuted. By the time an individual has decided to break the law,
it is too late. The only possible solution is to attempt to apply
preventive measures.

>Or those who hide in the Extra CW bands and ignore the rest of
>amateur radio. They are cowards and slackers who are abandoning their
>responsibility to the service.

Is it cowardly when a ham builds a new project rather than spreading
international goodwill? Or works a traffic net rather than advancing
the state of the art? Or uses a digital mode rather than sharpening
personal operating skills such as traffic procedure? (Of course not.)

As for responsibility, the only responsibility due from any of us
is to obey the law. The "service" can neither earn nor be due
anything. It is merely a concept of government.

>If we abandon spectrum, it will go to those without a clue, and
>they will behave as if they haven't a clue.

Resources never remain in the hands of incompetent persons for
long, other than through government intervention. It was the
government that created the Citizens Band, one of the few services in
which participants neither pay for the right to use the resource, nor
to keep it.

>Remember, we're back to a healthy growth rate again. We can't
>be as complacent and lax as we have been during the period
>of stagnation caused by Incentive Licensing.

As much as it pains me to say this, it has yet to be proven that Incentive Licensing damaged amateur radio. Further, the growth rate you refer to may not be "healthy", except for publishers and equipment manufacturers. In the final picture, the value of increased numbers will depend on the voluntary contributions made by the new operators and the quality of the hobby that results.

>Once more we need to seriously shoulder the burden of being elmers to
>those newly into the service.

A noble purpose, but not necessarily germane to the quality of ham radio. Teaching that which already exists does not provide technical advancement, nor will it be of use to those who enter ham radio for purposes contrary to the rules of conduct set out by law.

>Are you being a good role model, or are you part of the problem?

Obeying the law and being a good role model has little if any impact on persons whose agendas are significantly different. It is the *force* of law, not the request for voluntary compliance, that usually deters inappropriate behaviour in such adults. In ham radio, that force must include entrance requirements sufficient to remove unwanted visitors.

Greetings and Good Luck to All,
We will publish a special section on Saturday Nite. Anyone who has a special event or news you wish to share with the Amateur World get it to our mailbox before 8:00pm. The Special Issue will be up after 10:00pm. We will have news from local clubs in and around Indiana.
On Sunday anyone who has a wrap up story to share get it to us before 6:00 pm the special issue on Sunday will go up at 8:00 pm.
Remember, even through this is Field Day weekend ARO still has it's Internet hamfest running. Check it out and register for doorprizes.
Thanks

I've said it, stole it from one of Uncle Wayne's editorials really.
I always thought it was funny until recently, but some of the attitudes
of the pro-code forever crowd is making me re-think my position. Perhaps
there is some truth to it after all. Being a wetware modem does cause
electrochemical changes to the brain, who knows, perhaps it is damaging.
Maybe we need an Environmental Impact Statement before allowing any
more brains to be damaged by the dastardly Morse Code. Where's Jeremy
Rifkin when you need him?

Gary

Hi Bill...re: single speed test...well I'll drink to that suggetion !
Futhermore, I fully agree that OPERATING PROCEDURES on all bands and
modes is grossly ignored on all tests. This is an area that needs some
attention here in Canada and probably in the US from what I hear.
Even the BASIC licencees (our 'novice' level) have been heard asking...
"So now what do I do ?" after they earn thier ticket with regard to
getting on the air. I suppose the FCC and ISC depend more on clubs to
take care of this aspect of things but certain things should be
empasized during testing...ie..."How do I go about tuning up my HF rig
?"

Anyway, looks like we reached some mutual ground...thanks for the
comments.

Gary, do you work HF at all?? Except during contests, many of the
bands are dominated by ragchews and random QSO's within our own
borders.

> . . . but for a person with only HT exposure to repeaters, HF is
>going to be a major culture shock.

This is one more reason the F.C.C. should never have expanded
codeless privelages. A CW QSO on VHF is practically identical to a CW
QSO on HF. Only VHF 'phone operators are likely to have this problem.

>Jumping cold into HF can be like jumping into the shark tank
>at feeding time.

Your previous statement is correct - VHF has developed its own
culture. What you didn't say is that it is the worst possible
proving ground for development of efficient operating skills. Those
of us who cut our teeth on HF, rather than FM repeaters, know that HF
is no more unfriendly than any other evironment that demands a certain
degree of skill to be successful. A person going from CB to VHF would
have the same problems.

I would like to post my experience and opinion on this subject, and this
message seemed to be the most appropriate to add to.

I too, am the victim of a newly installed antenna array on my neighbor's
house. Now, I can not listen to FM radio near 98.5, or watch TV on
channels 2,4, or 5. And, every loudspeaker in the house picks up the
transmissions, the motion detector lights light up and my cordless phone
too. This guy transmits constantly from about 2PM to 2AM every day. I
called him and asked him if there was any he could check his equipment,
and he told me to "F*** off".

I called the FCC, and they explained the problem was that all my
telephones, speakers, TVs, and radios were faulty, and I need to install

filters on everthing. (That's a very expensive and painful proposition)
I asked if they could check his transmission power or signal, and they
said my situation was normal, and it's up to *me* to resolve it.

I think the time and money I'd have to spend to replace all audio cables
in the house and filter every radio, VCR, phone, etc. -- would be better
spent on a frequency scanner, amp, and transmitter. With not much power,
I'm sure I could jam his signal. Irrational? Yes. But I might have to do
it.
Anyone have other alternatives?
The FCC is proving useless.

Can someone explain the theory behind this? How does this technique create
the effect of an infinitely short ground?

>DO NOT use round conductor for any connection between the "ground lead"
>and the radio equipment. Use braid and/or strap only. This method makes
>the "rig" think it is AT the ground rod, as far as RF goes.

How does this make the rig think it is at the rod, and why would braid be
more effective than solid conductor? Assuming that the RF ground is not
required to carry a large amount of current, why is large cable necessary?

Doesn't braid introduce additional inductance into the path? How can the
length of the ground be neglected when its effectiveness normally requires
a certin relationship to the wavelength of frequencies it is expected to
carry?

Hi Dana,

It's just like a menstrual cycle for you. Only it's measured in years not days.

I suppose over time my stand on coded, no-code has changed a bit. The thing I object to is when no-coders DEMAND HF access without having to learn the code. I'll admit it, when I first got into the hobby I started with a no-code license but within a months time I had my 5WPM code because I got bored with what I had access to. But if I had no other interest in the spectrum below 30MHz I'd probably be a happy no-coder.

73,
Tony

That's my point. If it is of interest to just about everyone, then
commercial publishers can and will publish it (if ARRL does not beat
them to it). ARRL should sell the rights to the Handbook and other
best sellers to commercial publishers and concentrate on publications like
QEX that are necessary but not lucrative. The analogy here is to Public
Broadcasting. Their function is not to maximize ratings; that is what
the big 3 networks do. PBS is not the 4th network. ARRL should not be
yet another publisher.

Notes
=====

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details
of the calculation method are available on request.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.

Calculated distances may change if better information on station
location becomes available.

I would like to extend the table to include the best five QSOs for each
band and propagation mode, instead of just the top one as at present.

If you have any information on a possible record or exceptionally long
distance QSO please send it to the IARU Region VHF/UHF/Microwave DX
record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

Or via packet: GM4ANB@GB7SAN.#77.GBR.EU
Or via e-mail: john@kirsta.demon.co.uk

--
John Morris However, I still think that both points are worth
John@kirsta.demon.co.uk making. The fact that they are contradictory is
GM4ANB@GB7SAN.#77.GBR.EU ludicrous, but still irrelevant.
- Greg Goss

>increase in dues. Just who would this benefit, again?
>
>Roy Lewallen, W7EL
>roy.lewallen@tek.com

1. How much of the publishing profits go to subsidize membership
services vs. being reinvested in the publishing empire? Ever heard
of charities that raise money and then use it as seed money to pay
fundraising costs to raise more money? We need to guard against
this tendancy.

2. If the publication arm were sold (minus unprofitable publications
like QEX), a large sum of money might be realized. This could
be added to the ARRL's endowment fund and might earn more investment
income than the present publishing profits that subsidize membership
services. (Certainly would have in this year's stock market!).

3. If most of the ARRL's income is from publishing not membership
dues, guess who has the most influence in setting league policy,
the publishing management (and advertisers), or the members? This
is analogous to the control of newpapers by the advertisers, not
the readers, since the former pay most of the costs. You do know
that the is no such thing as a free lunch. Another example is the
AARP.

In that case it is no doubt covered under the ADA (aka Attorney's Dream Act) and any further anti-code comments will probably result in lawsuits.

>(Anybody buying into this?)

Hook, line and sinker.

Leon,
I have a IC2700 and have no problem with selectivity. The only thing that
I wish was a bit better is the Intermod. However,
the intermod is typical for a dualband radio (ie Kenwood, Alinco, etc)
I really like the IC2700.

Your recollection is correct, and I agree completely with your conclusions.

It is a travesty that U.S. tax dollars continue to be used in support of a
socialist government that extends individual rights only to those of a
certain religion. Their use of both force and espionage against us
merely confirms our own government's immorality in this issue.

>I too, am the victim of a newly installed antenna array on my neighbor's
>house.

You are indeed a victim, but not of your neighbor's transmission
system. Rather, the manufacturers of the consumer equipment you use
did not see fit to install the necessary filters and such required to make
their products reject lawfully-generated RF signals.

>I called him and asked him if there was any he could check his equipment,
>and he told me to "F*** off".

This is the most unfortunate aspect of this. The average non-ham consumer
has difficulty understanding the situation, and hams tire of fending off
the anger that results.

>I called the FCC, and they explained the problem was that all my
>telephones, speakers, TVs, and radios were faulty, and I need to install
>filters on everthing.

They're probably correct. The manufacturers of those devices could have
done the same thing for pennies, but unknowing consumers buy the products
anyway, without stopping to think about possible consequences.

>I think the time and money I'd have to spend to replace all audio cables
>in the house and filter every radio, VCR, phone, etc. -- would be better
>spent on a frequency scanner, amp, and transmitter. With not much power,
>I'm sure I could jam his signal. Irrational? Yes. But I might have to do
>it.

More than irrational, it's illegal. Assuming you can't prove that his
transmissions violate the law, the chances are good this will cause you
considerable trouble. Don't forget, the guy across the street knows
broadcasting and (I assume) has a license to pursue it. You don't. The
chances that he will let you get away with this without reporting your
illegal activity to the F.C.C. is nil.

>Anyone have other alternatives?

Fix or replace the devices you own and give the manufacturers as much grief
as possible for producing deficient products.

I didn't know that there is a YB 500. I've seen the Satellit 500, though. I looked at both seriously and couldn't justify the extra money for the 500 when compared against the few extra features.

I travel with my YB400 a good deal and (with the included external ant) listen in on the amateur bands a good deal. I also use it for SW listening out here in the western pacific (hard to take the Kenwood TS440 to the beach). I don't do ads for folks, but Monitoring Times is correct "a real winner."

: or your voice is tired.... also, why would you use a computer
: keyboard for this type of communication when you could talk?
: There are numerous advantages to every mode, including good ol'CW!

Exactly...and there's nothing wrong with continuing to USE
CW, but there's no longer any justification to test EVERYONE
that wants to operate on HF for CW ability beyond that
reuired by international treaty.

Merge the CW questions with the theory questions and score
the composite at 75%. That would eliminate the pass/fail
aspect of CW that no other mode currently has.
That's the real issue...why should any one mode hacve the
pass/fail status (again, beyond the requirements of international
treaty) that CW has as a gateway to most HF operation?

I just finished a California-to-Pennsylvania trip with the High Sierra antenna. It worked great. I mounted it on a trailer hitch on the rear of the car. Operated all bands 80 to 10, and worked plenty of stations including a bit of DX. Always got decent signal reports. The antenna did much better than the Hustlrs I used years ago, and it was really neat being able to QSY without stopping and getting out of the car. Try it - you'll love it!!

5735. Morse Code Testing Requirements

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-24 00:00:00 UTC
From: Larry.Roll@ssalpha.com
Message-ID: <fb6_9506241230@ssalpha.com>
Source record: 243865

Greetings All:

Just to add a little food for thought, I've seen a lot of postings lately regarding proposed changes to the Amateur licensing testing structure. One proposal would have the code/theory tests combined so that a passing grade could be achieved based on overall questions answered correctly, whether they be from the code or theory portion of the test.

On the face of it, this may seem like a reasonable idea; however, it's intent is to effectively eliminate the need for code testing. Nice try, but no cigar!

The one thing I can't understand is...WHAT'S THE PROBLEM HERE?

5-wpm code is grindingly slow...you can literally look up the characters in a book as they're being sent. 13-wpm is a good, slow, steady rate for casual rag-chewing. 18-wpm is a good, slow, "armchair" copying speed for low-volume traffic handling. And 20-wpm is just the beginning of what I'd call "higher speed" morse operation. None of these speed levels are at all difficult for the average person to attain with a little practice. The best way to get this practice is to use CW on-the-air.

I'm getting quite bored with this fallacious connection the No-Coders keep trying to make, between the Morse Code and "low technology." The two have nothing to do with each other. I'm sure you'll find that most hams today use computerized digital communications encompassing several diverse modes, in their shacks. I'm one of them. About the only mode I don't use is HF SSB, since the HF phone bands seem to be populated mainly with so-called "hams" whose only apparent "skill" seems to be an ability to hold down a mike button and talk at the same time. I spend about as much time on 2-meters and 440 MHz repeaters/simplex as anyone else, but am frustrated by the increasing numbers of No-Coders who have ABSOLUTELY NOTHING interesting to talk about! Their favorite topic seems to be their endless array of excuses for not learning the code or increasing their speed. As though getting MY absolution will somehow make a difference. What they need is to drop that mike, stop saying "This is N3XYZ listening" every 5 minutes, and set up an HF station.

To the No-Coders, I say...PLEASE...come up with something new if you're going to persist in your futile attempt to prove your point. Those of us who know better find it way to easy to deflate your arguments, since YOU JUST DON'T KNOW WHAT YOUR TALKING ABOUT!

BTW...how many of you high tech, computer-geek No-Coders out there can type more than 40-wpm? (I type about 90-wpm!) Anytime you want to add typing skill testing to the Amateur licensing structure...go ahead...make my day! At least that way, when I'm having a live "keyboard to keyboard" chat on packet, I won't have to put up with two- or three-word answers to my questions, and have to wait several minutes for them to be laboriously pecked out! Talk about your "high-speed" digital communications! Sheez!

73 de Larry, WR2F

This is the type of inflamatory note I was repsonding to. If all you want to do it use CW to communicate with other people, I'm sure we can alter IRC to let you use the Internet in the same way. Then there might be some more bandwidth available to those of us that like to be hams w/o CW.
Reasons to become a ham, and not use CW? How about experimenting, building/homebrewing, digital communications, visual communications, audio communications, public service, emergency services other then CW, and I'm sure there are others. Just because you like CW, doesn't mean all hams do.

ISSUED AT 24/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 JUNE AND FORECAST FOR 25 JUNE - 27 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 23 Jun
Daily Proton Fluence >1 MeV: 3.0E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 7.8E+08 (high)
X-ray background: A3.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 Jun 26 Jun 27 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 Jun: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 23 Jun
Learmonth 5 2222 1111
Fredericksburg 5 8
Planetary 10 9

Observed Kp for 23 Jun: 2342 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
25 Jun 7 Quiet to unsettled
26 Jun 25 Active
27 Jun 20 Active
COMMENT: IPS Geomagnetic Warning 17 was issued on 21 June and is
current for interval 26-30 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
24 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Jun normal normal normal
26 Jun fair poor poor
27 Jun normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
24 Jun 30 near predicted monthly values

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
25 Jun 20 Near predicted monthly values
26 Jun 5 About 10% below predicted monthly values
27 Jun 5 About 10% below predicted monthly values
COMMENT: IPS HF Communications Warning 20 was issued on 21 June and
is current for interval 26-28 June. MUFs at Townsville were near
predicted monthly values. MUFs at Hobart were near predicted monthly
values with spread F during local night.

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-24 00:00:00 UTC
From: rwilkins@ccnet.com
Message-ID: <3sgjhq$at6@ccnet3.ccnet.com>
Source record: 243908

John Minger (jaminge@pb2esac.esac.pacbell.com) recently wrote while thinking up a new way to confound customers when dialing the business office using a touch tone phone ;-) <3sf2jj$pah@gw.PacBell.COM>:

: Would anyone go for a plan like commercial broadcasters live with
: that would make them compete for frequencies with newcomers at some
: regular intervals? Such an arrangement could allow for the cost of
: a repeater by giving the owner a known interval in which he would
: not have to worry about losing his freq pair. It could provide some
: public forum for those who may think his stewardship of that
: precious resource has been less than appropriate. The "I was here
: first!" logic just doesn't quite cut it.

With over 5000 broadcasters in service, you only hear about one or two a year losing their licence to occupy a commercial frequency. Nationwide.

What would you recommend to turn over the spectrum a little faster than the broadcasters. What criteria would you use. Could that same criteria be applied fairly to a 75 meter net that has used the same frequency for thirty years?

Lets say I move to southern California and want to put up a 440 repeater. Under your proposal I would need to hire a bunch of hams from a certain 2 meter box to use a good 440 frequency that was up for renewal. Obviously that 440 box is either turned off a lot or the less than appropriate behavior is noticed by the public forum and they lose their rights.

Sounds fair enough to me ... Way Cool! ... Now I have the frequency and the vicious cycle begins all over again. Not vary sporting is it?

There is nothing wrong with first come first served as long as you are using the resource. The problem we are faced with is there are way too many folks not using the resource and using a piece of paper issued by the coordinator as a way of keeping new folks from using the resource.

In our area if you don't use that coordinated resource for ninty days, that piece of paper is automatically voided. There is enough turnover in this area, new groups can find a frequency. The real truth is the repeaters are active and well used so the pressure to put up an other repeater is diminished. Why put up an other if there are twenty good repeaters you can work hand held in the area.

Using a broadcast station as an anology isn't very good, either. The "public
interest" justification is largely a joke, especially in major markets. I
work for a radio station. We run PSA's and our obligatory hour of public
service programming at 7:00AM on Sunday morning only because it's required by
the FCC. They could give a rat's ass about "public service". Broadcasters
are in business for one reason and one reason only: To make money.

That's true only to the extent that you restrict your choices to only analog voice and OOK Morse. Other digital codes and other digital modulations work much better than either analog voice or OOK Morse when conditions are severe. For example, consider the NASA DSN. Signals from beyond Neptune are routinely received error free from transmitters of under 10 watts by the use of proper digital codes and modulations. Those signals are totally inaudible to the ear, even with the finest receivers. They are only copyable with digital correlators.

Fortunately, much progress has occurred in digital microelectronics since the early 1960s when the DSN was designed, and today we can build and use the same sorts of techniques in amateur radio very easily and inexpensively. For example, EME is within reach of any amateur running no more than 100 watts, if they use appropriate digital codes and modulations. And strong terrestrial signals like aurora are almost child's play to a good digital correlator. It does take a bit of intelligence on the part of the operator to analyze the path characteristics and choose the appropriate codes and modulations, of course, but then that's what amateurs are supposed to do, learn to apply proper techniques to solving communications problems.

We mustn't be one trick ponies, only knowing the most elementary signaling techniques. This is especially true for those who would take on weak or difficult signal paths. OOK Morse is the second worst method of doing that, behind only analog voice. Like the abandonment of spark to coherent carriers, we must similarly abandon incoherent modulations if we want to truly achieve good performance on weak or difficult paths. Fortunately, that's relatively easy to do today.

That's inviting a repeater war. Most coordinators avoid things like this
because, in spite of what you think, it will get them sued.

Coordinating a system on an unused frequency is one thing. Camping an open
system on top of an existing closed one is something else entirely.

Again, the measure of "results" is greatly dependent on your point of view.
I'm sure SCRRBA (and those coordinated by them) think they do a good job.

>Results based management, applied here, indicates that SCRBBA fails, while
>TASMA, which has the interests of most hams at heart, succeeds.

..in your opinion.

>Although you have continued to defend SCRBBA, you have also indicated a lack
>of agreement with their methods. I therefore conclude that your defense is
>half-hearted.

I have only two problems with SCRRBA: 1: They should answer their mail
better. I've heard this problem from more people than the few on this
newsgroup. 2: They need to populate the unused channels better. If a
repeater is off the air, someone else needs to be given that channel.

As far as the ratio of open to closed systems goes, the coordinator does not,
and should not, have anything to do with this. This is a decision that is
appropriate for the truatee to make. If the majority of trustees want to make
their systems closed, that is of no concern of the frequency coordinator.

There's certainly nothing stopping this except that the demographics of open systems would make the frequency difficult to use for the existing closed system. Because of this, most trustees won't agree to share under these conditions.

When I've made agreements for close spacing, usually both trustees know each other, and have simmilar activity patterns on their repeaters. It's a tough issue as a coordinator, because you have to serve the existing systems' trustees.

Pray tell me why the holding of a different, perhaps more advanced, licence entitles anyone's views to be more respected. Surely the interest factor and an individual's 'need' to hold a different class of licence is the important factor, not whether or not they are a more 'intelligent' or educated person. I can list many hundreds of UK amateurs who in our system are non-morse licence holders, but they are far more proficient in radio, electronics, etc. (perhaps even life!), than many of the full licence holders.

No offence implied or intended.

>Common sense tells me that removing CW and not replacing it with
>some other form of testing to maintain the same level of competence
>would result in an influx of ignorant and/or incompetent operators on
>HF (why is there ANY testing at all ?).

Then your "common sense" is neither common nor sense. You've shown no linkage between manual OOK Morse speed demonstrations and operator competence. That would be difficult to do since there is little or none, except in the very narrow and redundant sense that it shows competence in passing manual OOK Morse speed tests.

The only legitimate interst the government can have in testing is to assure, as much as testing can assure anything, that applicants have the knowledge to experiment with radio without causing hazard to themselves or to others. In that regard, testing of knowledge of regulations is essential, as is testing of knowledge of electrical safety issues and knowledge of emission characteristics. Since amateurs are allowed, even encouraged, to build their own transmitting equipment, knowledge of RF circuitry is essential to prevent unexpected harm to others through unintended signal radiation. But manual speed demonstrations of an alphabetic encoding does little or nothing to address any legitimate concern by government of lack of competence by the operator to operate within the scope of the service.

A look at the radio regulatory history of amateur radio is somewhat instructive at this point. For nearly the first third of this century, the government had little interest in manual OOK Morse speed testing for amateurs. That's because such testing would be a redundant. If a person didn't know Morse, they couldn't communicate by radio. It was only in the middle third of the century that an interest in manual OOK Morse speed testing was expressed by the government (primarily at the behest of the ARRL).

Why this belated interest? We must recall that the American Radio *Relay* League was formed to rapidly relay messages. Amateurs who operated slowly reduced the speed of transcontinental relays. When manual OOK Morse was the only modulation available, the ARRL was largely successful in getting amateurs to upgrade their manual OOK Morse speed voluntarily. But with the coming of other modulations in the middle third of the century, many amateurs turned their backs on manual OOK Morse in favor of radiotelephony, and a bit of radioteletype and amateur television too. This naturally caused consternation in Newington for several reasons. First, the heart and soul of the ARRL was bound to radio *relay*, and fewer phone operators were interested in relay work. Second, the 1928 action of the FRC, which

effectively removed 40% of the then prime amateur spectrum, made crowding a more serious issue. Since AM phone used a lot of spectrum, the ARRL wanted its use restricted. And thus we got the somewhat ridiculous regulation that higher manual OOK Morse test speeds were required for access to phone operation than for access to Morse operation. This was the original start of government sanctioned amateur radio classism based on manual OOK Morse speed testing.

But time marches on, and technology advances. Today's concerns are not those of the 1930s, and today's technology offers several better answers to radio relay and spectrum conservation than the manual OOK Morse of the early part of this century. But the regulations continue to give unwarranted weight to manual OOK Morse speed testing today. Manual OOK Morse tests are now seen primarily as "rites of passage" rather than as having any legitimate regulatory purpose. The fight to retain these manual speed tests is now a quasi-religious one based on few rational arguments, certainly none having to do with operator competence. Truly competent operators know that manual OOK Morse is the second worst method of efficiently transfering information via radio under difficult conditions, and the worst method for transfering information under less than difficult conditions due to its low information bandwidth (primarily a result of the limitations of wetware modems).

>What is your reason ?

I'll give you my reasons. I have little to gain personally from the removal of manual OOK Morse speed testing, only a few piddling kHz of phone spectrum I don't care about anyway. But I do have a personal stake in testing reform for another more substantial reason. I want to see amateur radio prosper and grow, and I want to see amateur radio advance and keep up with technological progress in communications. To do that, I believe it is essential to strip the blinders to progress formed by the self-selection process of manual OOK Morse testing from the service. Amateurs have been conditioned to believe in the superiority of manual OOK Morse as a communications method by both myth and the testing system. I do my best to explode the myth here, and believe whole heartedly that removal of the over-emphasis on manual OOK Morse in the testing process is an essential element in bringing amateur radio into the late 20th century.

>I have provided rational reasons why I think it should stay while I have
>receive none such for reasons to abolish it.

No, you haven't. You've stated incorrect "facts", and you've given quasi-religious rationales, but you haven't given any rational reasons why the testing system should over-emphasize manual OOK Morse speed demonstrations.

You (and others) say that an amateur license should be "earned", but amateur licenses are not supposed to be *for sale*, whatever the currency used to pay for them, be it cash or labor. Amateur licensing is done solely to protect the public interest the government legitimately has in seeing that a person doesn't cause harm by exercise of his *natural right* to use the spectrum. As a society, we voluntarily

allow restrictions on our natural rights in order to preserve the rights of others. We obey the "rules of the road" because it results in a public good if we don't present a hazard to others using the public roadway. Similarly, in amateur radio, we must know how to operate safely and without causing inadvertent harm to others, in order to protect the public interest. That's the sole purpose of licensing, to show that we have the knowledge to avoid harming ourselves or others through the exercise of our natural rights. Manual OOK Morse speed testing has little, if any, relevance to that legitimate purpose of licensing today.

A few days I posted a note with the title "Snot-hole Morse cde bigots".
I realize this was a flame; it doesn't surprise me that I've been
flamed in return.

I believe it is atypical for me to indulge in such blatant name
calling; if you think otherwise, spend a few minutes and
have a look at the UCSD archives of the radio groups going
back to 1990. Keep in mind we all flame from time to time,
and some people don't do anything but flame. I don't believe I
do it often, and I'm human anyway.

Since I've already been accused of "knocking CW", please note
that I have no problem with Morse code itself. I do have a
serious issue with the use of Morse code a litmus test
for whether a ham is "real" or not. I disagree strongly with the
characterization of all no-code supporters as "too lazy"
and motivated by "personal convienence". Of course, I have
little patience anymore for the idea that a ham must be an Extra
to be qualified to discuss the amateur licensing requirements.

If you were offended by the use of the term "snot", then please
replace the word with something less offensive to you, possibly
"mucous". However, my note stands: I've lost my patience for
Morse code bigotry.

Have a nice Field Day...
Dana

I'm not discussing the capabilities of HF transceivers, Jeff.
Your assertion, in context, was clearly "every HF-licensed ham
worldwide has a CW capable transceiver sitting as his fingertips".
It is this assertion that I disagree with. How do you know every
HF-licensed amateur in the world has an HF transceiver? I don't
believe you can make this statement with any degree of certainty.
I know several HF licensed hams that don't have an HF transceiver.

>modifying is obsolete, contests are obsolete, ham-fests are
>obsolete, this never-ending debate is obsolete...
>In fact, according to Jim, everything hams do that no other
>service does is obsolete.

Only in your twisted little mind. None of the things you list
above are obsolete, but doing them using obsolete methods, or for
obsolete purposes, may be obsolete. You wouldn't consider using a
spark transmitter today for Field Day (well perhaps *you* would)
because it is an obsolete carrier generation method that not only
wouldn't be very effective, but would also cause harm to others.

Nor would you consider using a coherer as a detector if you decided
to do EME. That's because it wouldn't be very effective, it's obsolete.
Similarly, you shouldn't be using high power manual OOK Morse for
EME today, because it is obsolescent. Coherent digital transmissions
will allow you to use far less power and pass far more information
over the EME circuit. Nor would you use AM modulation today in
building a repeater. It's less effective than FM, it's obsolete
for that purpose. Etc.

The fact that other services have abandoned manual OOK Morse,
just as they earlier abandoned spark, is an indication that it
may be an obsolescent alphabetic encoding technique.

As a competent operator, you should be expected to use the best
available techniques for the communications task at hand. Today,
that is rarely, if ever, manual OOK Morse unless you *voluntarily*
restrict yourself to its use as a personal choice. Now that's
fine, unlike the spark transmitter, you aren't too likely to cause
harm to others by using manual OOK Morse encoding on a coherent
RF carrier, and the limitations in performance you suffer are your
own personal choice. What's wrong is attempting to foist that
personal choice on everyone else by use of government coersion.

>I'm honestly beginning to believe that digital modes ``cause brain
>damage'' (taken from a recent Gary Coffman post with regard to CW).

If so, remember that manual OOK Morse is the original digital technique, and the one traditionally most intimately connected to the wetware. The Pavlovian conditioning you underwent to become a wetware modem subtly changed electrochemical pathways in the brain. I can't say for *sure* that that represents brain damage, but it could, and some of the impaired reasoning exhibited by manual Morse proponents here (Morse is language, Morse gets through when nothing else will, etc) could be taken as evidence of that damage. Or it could just be the result of ignorance, low IQ, or social conditioning by the amateur tests and members of the amateur community in the form of the Big Lie technique which has spawned the false belief that manual OOK Morse is such a superior technique for radio communications that speed demonstrations must be mandated for licensing purposes.

Why did Daniel Boone, Davy Crockett, the mountain men, etc keep moving
West? They were pioneers too, and they too wanted "elbow room" away
from the masses. But the masses came anyway, and they moved on. That's
the life of a pioneer.

>Why can't _you guys_ move up to the bands where there's plenty of room and put
>on all your open systems? What makes 440 MHz so special?

Nothing much, it's just the next territory West opened up for settlement.
The meek and timid, the tenderfoot, will stop here, at least for a while.
It's up to the experienced pioneers to push on into unknown territory.
It's always been thus, and it represents a social good that it is thus
for otherwise the new territories won't be opened successfully. The
tenderfeet would be slaughtered by the hostile conditions without
experienced pioneers to break the trail.

Yeah, it's social darwinism, and it isn't always pretty, but it works.

That's true, though it has little or nothing to do with radio as you
note. If you expect to need to communicate by light, whistle, horn, or
teaspoon, learning Morse may be useful, but in many of those cases,
use of a bullhorn, flag signals, or Amslan would be just as, or more,
valuable.

>I beleive that if digital modes used tokenization to the extent CW dose
>(Q Signals) the band width could be less than CW.

It is anyway for the same symbol rate. I note with some amusement that
the ARRL in the 1930s pushed hard for Esperanto to become the international
language of radio. That failed, however, when the world insisted on adopting
QSO-English instead. It doesn't really matter much which encoding is used
for a limited vocabulary as long as the encoding is efficient. OOK Morse
isn't a very efficient encoding. Like the QUERTY keyboard, it hangs around
because of familiarity by the established user base.

>I also think that if we applied DSP to CW and converted back to sound that
>the trained human ear could beat the machines. The through put would be
>lower with a human on the recieving end but he will be more versitile.

But of course that would be the worst possible application of digital
techniques. In the first place, it's the OOK nature of manual Morse
that's the source of much of its poor performance, and in the second
place, it's use of uniform coherent encodings that gives machine digital
much of its power. If you ignore that, you ignore much of the advantage
of machine digital technique.

>I have spent the last 6 years working with embeded systems, DSP, data
>aquesition and machine vision and I have found that what is obvious to the

>ear or eye is not so easy to pickout with a computer. The dsp answere is
>a fantastic tool but it lacks versitility. It will get better but CW will
>always have a place.

The brain is a marvelous pattern recognizer, especially the visual
system which has about 10,000 times the bandwidth of the aural system.
However, coherent correlators are even better pattern recognizers
when the pattern to be recognized has uniform and coherent properties.
That's why codings designed for machine interpretation are so much
better than Morse. They can be quickly and accurately identified
under conditions that totally overwhelm the human wetware.

No doubt manual Morse will always have a place, even if that place
is just in a living museum. I don't see anything wrong with that,
heck I spend far too much time at live steam exhibitions and blackpowder
shoots now. No doubt some will always hang around to watch a manual Morse
exhibition too (especially if coupled with the visual excitement of a
large rotary spark gap transmitter). It's all so very Victorian. :-)

No. Though you can use an isolation transformer at the ground window
instead if you like. I still consider GFI protection mandatory, though
the Code doesn't, in that case.

>pump-thingy to the ground window cause a code problem? Is the solution as
>simple as making that one new wall plug a GFI unit?

Well, if you don't care about lightning protection, all this effort is
moot. However, if you do care about lightning protection, you can't
afford to leave *any* step undone. It only takes one unprotected wire
to undo *every* bit of protection you've installed. There are no
shortcuts. Using a "temporary" extension cord once cost me $10,000
in equipment damage, and a fire, even though the station was otherwise
properly protected. Do it right, or don't bother to do it at all.
A false sense of security is worse than *knowing* you are vulnerable.

Right, but I've been led to believe that distributor wholesale is a
lot higher in Britain than it is here. In other words, while the
retail dealers might not be getting rich, Icom, Kenwood, Yaesu, etc's
agents *are*.

>
>How about just getting rid of the complete amateur test and making it a
>free-for-all just like the 11 meter band !

Don't be absurd. We're talking about the merits of "right on red"
while you want to dump the whole traffic code. There is a difference.

>Dump CW..I'm not that hung up on it.
>Just be sure to have some means in place to maintain some level of
>operator competence. WE wouldn't want the HF bands to turn into an 11
>meter "freeband".

I think we can all agree that we don't want amateur radio to become
an 11 meter freeband. The dispute is on the means to prevent that.
I don't think that has anything at all to do with Morse speed testing.
Amateur radio has always depended on self-policing and peer pressure
to maintain its decorum and good operator behavior. For the most
part this has simply been a matter of setting a good example and
being a good role model for other operators. Testing has almost
nothing to do with this other than to remove the excuse "I didn't
know" from the offenders (which isn't a legitimate excuse in any
event).

When we are poor role models, either by sinking to the level of
those who offend us, or by running away and abandoning spectrum
to those who might behave properly if only they had good examples
to follow, we are contributing to the decline of amateur radio.
It particularly saddens me to see the all too frequent comment
here about folks running off and hiding on closed repeaters in
the 70 cm spectrum instead of doing their bit to set a good
example on 2 meters. Or those who hide in the Extra CW bands
and ignore the rest of amateur radio. They are cowards and
slackers who are abandoning their responsibility to the service.
If we abandon spectrum, it will go to those without a clue, and
they will behave as if they haven't a clue. It's up to those of
us who have at least rented a clue to politely show them the way
by being that admired example they will want to emulate.

Remember, we're back to a healthy growth rate again. We can't
be as complacent and lax as we have been during the period
of stagnation caused by Incentive Licensing. Once more we need

to seriously shoulder the burden of being elmers to those newly into the service. Nor should we be arrogant about it. We truly do not know it all, and we should always be ready to learn as well as teach. Many of those newly minted into the service bring with them valuable knowledge and skills that can be applied to amateur radio. Good communications must be two way.

And the most important point is that learning begins when the testing ends. We should never forget that. The test is not an end, it is only a beginning. Passing the test does not make one a competent operator, never has, never will. Its what we learn, and how we apply it, *after* the testing is over that determines whether we will be good operators. We learn that mostly by example. Are you being a good role model, or are you part of the problem?

I could, Bob. But I'm not gonna. Reason being that although I can handle getting flame mail, I know that a lot of people are averse to it. I personally don't think that usenet is much of a forum for problem-solving because of the kinds of posts we've seen from Rorey Burke, k5fog, and the like. Because of posts like these, you see limited interest in participating here.

Why bother with usenet? Well, firstly, I keep hoping that I'll hear an argument or idea that I had **not** thought of or heard before. We do, after all, have some pretty knowledgable people on this thread, such as Jim Reese and yourself.

However, I don't think that usenet is a good forum for actually **solving** the issue. Too many discourteous flamers come out of the woodwork, don't really care about the issues or even bother reading the posts.

>their systems closed, that is of no concern of the frequency coordinator.

Good post Jim. Here's why I disagree with it.

1. Darned right they should answer their mail better. Not doing so should be grounds for assuming they are out of business and no longer exist as a coordination group.

2. Unused channels: the heart of the problem. Sure, they need to populate unused channels on 440 better. ***That's most of the band!!!*** In other words, they've done a poor job coordinating **most of the band.**

3. Open/closed the job of the trustees not the coordinators. But Jim, SCRBBA **is** the trustees and the trustees **are** SCRBBA. The two are one and the same. And even if they weren't, it awes me that you think that whether a repeater should be open or closed is not a consideration in granting coordination. TASMA makes this a major criterion, and the effect of this is that we have a 2 meter band that is a model for all bands: it is full of excellent, well-run repeaters, that have ENTICED THOUSANDS OF AMATEURS INTO JOINING OUR **DYING** HOBBY.
Does anyone here doubt that what little growth our hobby has experienced is due to people joining it to get the privilege of using VHF open repeaters? Even the ARRL admits that this is so. The novice license, the former gateway to the hobby, is dead. The novice roundup contest is no more. To ignore the need to have open bands is to ignore the need for our dying hobby to survive. Personally I love amateur radio, my lifelong hobby, and do not want to see this happen. A privileged few locking up a band, while the other one gets crowded and overused, are not helping this hobby survive.

Mediocrity is the sworn enemy of excellence. As long as we cling
blindly to nediocre methods, we hamper the implementation of better
ways. The mindset that says "we've always done it this way" is often
the largest factor inhibiting progress. It takes a strong willed
individual indeed to break the mold of entrenched myth and tradition.
That is made harder when those entrenched myths are backed by government
force.

GC>>of a machine to copy code as conditions gradually diminish.
GC>>Use all the filtering DSP algorythms you like. Characters will be missed
GC>>as the machine has to re-adjust itself while conditions are changing.
GC>>This is aside from the characters that would be missed when tones become
GC>>non-existent...as with in the case of a human.

GC>Check it out, Hugh. You won't be able to hear a thing other than
GC>noise, but the machine can. It's not a matter of speed, its a matter
GC>of coherent correlation. The machine can do that for a uniform coherent
GC>encoding completely buried in noise and interference, you can't.

GC>The machine can't pick incoherent non-uniform OOK Morse out of the
GC>noise much better than you can (at least not in realtime), but that's
GC>irrelevant. It's that bad old encoding we're trying to get rid of
GC>*because* it can't be pulled out of deeply embedded noise and
GC>interference by man *or* machine. With coherent encodings, at least
GC>the machine can copy it even if the man cannot. That a machine can

GC>also often do it faster than any man could is just a bonus.

GC>You have access to a library, look up Huffman codes and Golay codes.
GC>Read up on coherent correlation. Then come back with an understanding
GC>that if we'd wanted to design the most ill suited weak signal method
GC>possible, we couldn't have gone far wrong by inventing OOK Morse.
GC>It has nearly the worst imaginable characteristics for weak signal
GC>transmission.

GC>>If I remember right the jamming was to prevent the GE scatter gun from
GC>killing
GC>>the Exorcet that was fired at it.
GC>>
GC>>: calling for help (not to mention specifically shooting/rocketing all
GC>>: the visible antennae on the ship, particularly the 35-foot whips used
GC>>: for HF comms). LIBERTY's RMs and ETs used a temporary wire antenna
GC>>: (strung quickly and at great hazard) and *CW* to break through the
GC>>: "buzz-saw" jamming and contact COMSIXTHFLT, which scrambled fighters from
GC>>: a carrier in the Med (could have been the FORRESTAL, not sure on that).
GC>>: As soon as Israeli COMINT monitors realized that LIBERTY had gotten
GC>>
GC>>Am I missing something here. The Liberty is the ship that was shot at in
GC>>the Persian Gulf. I don't remember any major attack just one exorcet.
GC>>
GC>>
GC>>I have been wrong before..

GC>And you're wrong again. :-)

GC>The Liberty was the US Navy ship mercilessly strafed and bombed by
GC>the Israeli Air Force, and attacked by torpedo boats of the Israeli
GC>Navy in international waters in the eastern Med during the 1967 Six
GC>Day War. Of course the Israeli's claimed this well planned and executed
GC>joint air/sea attack was an "accident", but anyone who studies the matter
GC>can see that for the transparent lie that it is. The Liberty was an
GC>ELINT ship, an electronic eavesdropper. It was monitoring the spoofing
GC>of Egyptian, Syrian, and Jordanian communications by the Israelis intended
GC>to suck the latter two into the war so Israel would have an excuse for
GC>extending its territorial claims to the West Bank and the Golan before
GC>the US could bring pressure to bear for a ceasefire. It worked too.

GC>The ship in the Persian Gulf attacked by an Iraqi Exocet was the
GC>USS Stark. This happened during the Iran/Iraq tanker war. It's
GC>*possible* that this was an accident as claimed, but there's a
GC>hell of a radar signature difference between a supertanker and
GC>a destroyer. OTOH the US was secretly backing the Iraqis in that
GC>war and there was no reason for the Iraqis to deliberately attack
GC>a non-hostile US warship. The Iranians also had destroyers bought
GC>from the US during the reign of the Shah, so the Iraqis may have
GC>thought that was what they were attacking. The Exocet was launched
GC>from beyond visual range, so such a misidentifcation is at least
GC>plausible.

GC>There was no such excuse for the Israeli attack on the Liberty.
GC>She was well marked as a US Navy ship, was flying the big 20 foot
GC>US flag, and had antennas that clearly marked her as an ELINT ship,
GC>something none of the Arab nations had. The Israeli pilots and
GC>torpedomen would have had to have been blind not to realize that
GC>the ship they were repeatedly attacking was a US Navy vessel.

Heil Gary!

Which individual rights are you talking about, Jack?

>Last I heard, there are many people under Israeli control who aren't
>allowed to vote because they're not Jews. Has that changed?

There is a difference between Israeli and non-Israeli citizens. All Israeli citizens have freedom-of-religion. The Palenstinians (which you are going so far out of your way to avoid mentioning) are not only not citizens of the State of Israel, but also do not wish to be so (last time I spoke with a Palestinian nationalist, that was the case). Anyone else you want to consider? Christians and Druze both serve in the army and can vote and pay taxes just like everyone else. Hindus? If they are citizens, they vote. Vietnamese buddhists? Yes, there are Vietnamese expatriots in Israel and they are full citizens.

Anyone else, or would you like the opportunity to pull your foot out of your mouth and not embarrass yourself any more?

Hey, what about those Puerto Ricans--under US control but can't vote for the President, huh? Sheesh.

>No. What would I see besides people with rights and people without?

Which rights are which people doing without? All over the US I see people with and without rights. What of it? Don't be so coy, Jack--put your money where your mouth is.

>That wasn't brought up in the post. How does it relate to socialism in
>Israel?

What pray tell is wrong with socialism in Israel? It's their country--let them run it. You don't like your money going to *SOCIALISTS*? Too bad--better vote out those nasty folk who vote for the only operating democracy in the middle east.

>>Here's a shekel Jack--rent a clue.
>Maybe you should send it to someone in Israel who has no property rights.
>Thet's probably who earned it in the first place.

Huh? Who has no property rights in Israel? Anyone with enough shekels can buy property. What is the problem? Who earned what money?

Here's a dollar Jack--buy a 100% American clue.

SB DX @ ALLBBS $OPDX.212
Ohio/Penn DX Bulletin No. 212

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 212
BID: $OPDX.212
June 26, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2YJL, N4AA & QRZ DX, WQ5Y, K0IR, EI2GX, ES7RTY, ON6TT and G4BUE & DX News Sheet for the following DX information.

3V, TUNISIA. OE6EEG is planning an operation at the club station 3V8BB for the first two weeks of August on all bands and possibly RTTY operation. QSL via JF2EFA if they use the 3V8BB call or watch for announcements if they use individual calls.

A6, UNITED ARAB EMIRATES. Don, WB2DND, will once again be active from A61AD. Operation will be between July 24-28th and July 31st through August 2nd. Don operates mainly on CW.

C4, CYPRUS (5B). ATTENTION PREFIX HUNTERS! The DXNS reports that 5B4XF, 5B4WN, 5B4AFM and 5B8AH will be active from Yeoryiou Island (AS-120), from July 10-13th, with the special callsign C4AY. QSL via 5B4KH, P.O. BOX 5089, Nicosia, Cyprus.

D2, ANGOLA. Peter, ON6TT, will be leaving for D2-land this week for a Red Cross mission for the next 2 months. As of press time, Peter was not sure if he would be active on 160 and 80 meters (but I would give them a listen too!). ADDED NOTE, from Peter, on the status of some of the gang working for UNHCR: 9Q2L (Alex-PA3DZN) left Goma for a holiday of one month. He will return to Goma afterwards. 9X/ON4WW (Mark) will leave Kigali end of June, possibly to return in August. Lastly, 9Q5FH (Alfredo-EA1FH) who started a mission in Bukavu, and will move to Kigali mid July.

EJ3, INIS MEAIN ISLAND (IRELAND). The WestNet DX Group, consisting of operators from the Republic of Ireland, Wales and Northern Ireland are again planning a major effort in the IOTA contest in July, 1995. The operators will operate from this island which is part of the Aran Island (IOTA EU-006) located off the Atlantic coast of Ireland. Activity will

be from Thursday, July 27th to Tuesday, August 1st. Outside the IOTA contest, the group will concentrate their activity on 160m and the WARC bands. They also hope to be operational on RTTY/AMTOR/PACTOR and they hope to obtain a special callsign in time for the IOTA contest which will be announced later. If a special callsign is not granted the callsign EJ3HA will be used. Operators for this adventure include:
Republic of Ireland: EI6FR, EI2GX, EI3HA, EI9IF, EI7DSB.
Wales: GW4VEQ, GW0ONY, GW4OFQ, GW3JXN.
Northern Ireland: GI0KOW, GI0NWG.

ES6, SAAREMAA ISLAND (ESTONIA). A group of Estonian amateurs will operate from IOTA EU-034, located in the Baltic Sea Coast Group. Operators include ES6DO and members from Viljandi Radio Club. They will operate from June 29th to July 4th using the callsign ES6Z/0. Their activity will be on 3.5 - 24 MHz with CW and on SSB around IOTA frequencies. QSL via ES6DO.

IOTA NA-092. Dave/WQ5Y, Mike/KG5CM and Frosty/K5LBU will again activate Mustang Island, located in the Texas West Group as a multi-single entry in the IOTA contest this year (July 29-30th). Possible other operators are Bob/K1TU (CW) and Rick/KF5NU. This group hopes that they do not get blown off the beach again like last year 6 hours before the contest ended!

JY, JORDAN. This past week's excitement was the activity by the King of Jordan, JY1, on two different days (Thursday and Friday). In the presence of his QSL Manager (Mary, WA3HUP), lists were taken to work the King. Well known DXer Amir, 4X6TT, was one of the list takers, but also stated he has waited 25 years to work the King himself and was very delighted that he finally got a chance to have a QSOs with him. (ed. Your editor needs this one for the Arab Knights Award!) The activity happend on 14240 kHz beginning around 2130z.

KH9, WAKE ISLAND. The Dateline DX Association plans to be active some time in autumn, which may include activity in the CQWW SSB Contest in October. The operators mentioned so far are: AL7EL, WB2DND, KC7V and K4HQI, plus others to be named later. They plan to have three stations active on all modes and bands.

TI9, COCOS ISLANDS. Jose, TI2JJP, is reportedly returning to Cocos for approximately 15 days beginning around October 9th or 10th. He plans to operate 80 and 160 meters in addition to other HF bands.

VK0, HEARD ISLAND. Two press releases were sent to OPDX, one from Ralph, K0IR, and the other from Peter, ON6TT, which reported the following: Plans are firmly in place for a DXpedition to Heard Island. A multinational team is scheduled to sail for Heard Island from Fremantle, Western Australia on November 1, 1995. The Australian Antarctic Division has issued permit number 95/1 allowing a full-scale amateur radio operation. All environmental assessments and letters of indenification have been filed and approved. A separate proposal for scientific work during the stay is expected to be approved. Ralph states he has the signed permit for the operation in his possession.
A 140 foot vessel has been chartered for the 5,000 mile round trip to

Heard Island. The team is expected to arrive at Heard Island on November 12th. Landing will occur whenever weather permits and operation will commence as soon as possible.
An all band/all mode operation, including satellite and RTTY will, occur thanks to support from Yaesu, Cushcraft, and ETO. Some new innovations tested on Easter Island & Salas y Gomez this fall will be implimented if practical.
Departure from Heard is expected to occur on December 1, 1995 (+/- weather) with an arrival back in Australia on December 12th. Hopefully, all team members will be home for Christmas.
The DXpedition was organized by 3Y0PI veterans K0IR (Expedition Leader), KK6EK (Scientific Coordinator) and ON6TT (European Coordinator). The team also currently includes another 3Y0PI team member HB9AHL, plus N6EK, PA3DUU, K5VT, DJ9ZB, and JH4RHF. Additional support will come from JH1AJT (Japanese Coordinator) and VK2BEX (Australian Coordinator). Sir Edmund Hillary has has consented to be the teams' Honorary Expedition Leader.
Ralph states, "We face a difficult task. Heard is the most challenging of the subantarctic islands. Winds regularly exceed 100 mph and blow snow, sleet, rain, and sand ... all at the same time. There is no reliable source of fresh water on the island. Landing and departure can be extremely difficult. However, we will give this expediton our best effort and will proceed with confidence. Thank you in advance for your support and encouragement." 73 -- Ralph Fedor - K0IR
The DXpedition needs your support. Contributions to help defray the high cost of transportation are needed. Please forward these to:

USA: K0IR Heard Island DXpedition,
P. O. Box 563, Waite Park,
MN 56387-0563.

EUROPE: ON6TT - Peter Casier
Oude Heerbaan 30
B-9230 Melle (Belgium)
(when sending cheques to Peter, pse use Eurocheques only, drawn in YOUR currency and with the Eurochequecard number written on the back. The bank charges too much if the cheque is made in any other way)

Other contributions can be channeled through JH1AJT and VK2BEX.
Additional details about the project will follow.

VQ9, CHAGOS ISLANDS. QRZ DX reports that Press, N6SS, will be returning for a 4 month stay on the island of Diego Garcia. He will be operating from the club station as VQ9SS and plans to built a 160 antenna soon. QSL via N6SS.

ZK3, TOKELAU ISLANDS. Ron, ZL1AMO, is currently active as ZK3RW. Activity has been mainly CW on 80-17 meters. Check around 3505 kHz around 1016z, 14025 kHz between 2300 and 0230z (also watch 14195 for SSB) and 7005 kHz at 0530z. Reports indicate that Ron will be there for the next three weeks. QSL via ZL1AMO.

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

>That's right Bill...it doesn't exist for Amateur Radio (yet ?).
>So what's your point and reason that CW should go ?

RA> Nobody ever said that CW should go. Where in the world did you get
RA> that self-pitying, paranoid idea from? We're discussing taking CW off
RA> a regulatory pedestal, not the air.

Greetings!

Well, if this isn't a classic case of the pot calling the kettle black! Most of the anti-code tirades I've read from the "No-Coders" also would fall into the category of "self-pitying, paranoid" ideas. And the actual fact is, the majority of the "No-Coders" do actually want to see the literal abolishment of CW and Morse Code take place. These are the ones who see the Morse Code as an "obsolete" technology, and the learning of it as a "waste of time" which could presumably be better spent on the development of the next generation of digital communications technology.

The truth is, the code remains on it's "regulatory pedestal" due to it's effectiveness as a communications mode. It is simply the most valuable skill an amateur radio operator can have. The so-called "hams" who choose not to develop and use this skill, are severely deficient in their ability to provide emergency communications to the public.

It all boils down to one thing...laziness on the part of those who won't make the effort to learn the code. The "No-Coders" who post their arguments are, for the most part, simply jealous of those who did learn the code and are having fun using it. A classic case of class envy.

Those of us who didn't want the "No-Code" concept are now living in a world we never made, and are seeing our predictions of it's effects on the Amateur Radio Service come true. Sure, the numbers have gone up. But the quality has been diluted significantly. The two-meter band is now a consumer commodity. And, of course, all these brilliant, computer-literate techno-whizzes, who can't be bothered to learn the code, are naturally giving us one amazing new breakthrough in high-speed digital communications a day, at least! NOT!!!

All the No-Code concept has done so far is bring in a lot of ex-CB'ers who now stand around at the hamfests, their Radio Shack HTX-202's clipped to their belts, speaker mikes clipped to their T-shirts, and rubber-duckie nestled into their donut-filled bellies. They jump on every peep heard on the repeater with their high-noise signals, and

wonder why nobody wants to talk to them. Sheez!

I am borrowing an Icom W2A dual-bander from a friend - and it has CTCSS encode/decode built in. Is this the same thing as "tone scan"? What I am asking is, if I happen to find a repeater as I am scanning the band, and I can't get in because there is a PL tone, is there some way that I can find out what the PL is, using the equipment that I have on the radio? I've seen this feature advertised on newer rigs, and I was wondering if this rig will do the same thing.

thanx in advance
Joe KB2SFT

: >that anyone must learn CW <snip>

: Why would anyone who doesn't expect to learn CW want to
: become a ham? It makes about as much sense as a eunuch joining a
: dating service.

Gee, I guess when I wanted to become a ham in 1957...despite having
no desire to use or learn CW, my intent and wants must have been
in error.

To say the CW is or must be synonomous with being a ham is
totally unfounded in any sense of the word logical.

: If the folks complaining about this got off the 'Net and on the air,
: it wouldn't even be an issue.

What a preposterous assumtion. Just because I enjoy the internet
and have am opposed to continued CW testing, this guy assumes
I (and all others with a similar background) never get on the air.
Great logic again!

Guess it boils down again to the old axium... If you can't
make a rational argument, toss out a few red herrings or
impune the credibility of the poster(s) who oppose your
viewpoint.

>of this is that we have a 2 meter band that is a model for all bands: it is
>full of excellent, well-run repeaters, that have ENTICED THOUSANDS OF
>AMATEURS INTO JOINING OUR **DYING** HOBBY.

Good for them. I suspect the reason they succeeded is that generally, the attitudes are different on 2 meters than other bands. I don't know why this is other than the personalities, but they are different everywhere I've travelled.

> Does anyone here doubt that what little growth our hobby has experienced
>is due to people joining it to get the privilege of using VHF open
>repeaters?

I certainly do not doubt that VHF and UHF attracted many people into ham radio. I believe this is mostly because of the no code license. Whether the repeaters they use are open or closed makes little difference. VHF and UHF still represent the majority of ham radio activity.

At least we agree on this point! :)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 25 JUNE AND FORECAST FOR 26 JUNE - 28 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 24 Jun
Daily Proton Fluence >1 MeV: 3.0E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 6.6E+08 (high)
X-ray background: A4.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
26 Jun 27 Jun 28 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 26 Jun: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet upto 13UT then active

Estimated Indices : A K Observed A Index 24 Jun
Learmonth 14 2222 3443
Fredericksburg 10 5
Planetary 15 6

Observed Kp for 24 Jun: 1122 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
26 Jun 30 Active to minor storm
27 Jun 25 Active
28 Jun 20 Active
COMMENT: IPS Geomagnetic Warning 17 was issued on 21 June and is
current for interval 26-30 June. The forecast geomagnetic activity
commenced at approximately 13UT 25 June.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Jun fair poor poor
27 Jun fair poor poor
28 Jun normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
25 Jun 22 near predicted monthly values with spread F during
local night.

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
26 Jun 0 About 15% below predicted monthly values
27 Jun 5 About 10% below predicted monthly values
28 Jun 5 About 10% below predicted monthly values

COMMENT: IPS HF Communications Warning 20 was issued on 21 June and
is current for interval 26-28 June. MUFs at Townsville and Hobart
were 5-10% below predicted monthly values with spread F during local
night.

jbaltz@watsun.cc.columbia.edu (Jerry B Altzman) wrote:

>Which individual rights are you talking about, Jack?

The basic ones - the right to sovereign ownership and use of property, the right to free speech, and the right to be free from victimization by coercion or fraud.

>There is a difference between Israeli and non-Israeli citizens. All
>Israeli citizens have freedom-of-religion.

Nonsense. Freedom-of-religion requires more than simply being permitted to gather and speak as one chooses. I will remind you that the Israeli government was established to create a self-governing homeland for Jews, and to prevent their persecution. It is impossible to separate either the government or this goal from the tenets of Judaic culture and religion, and like most religions, one aspect of this is the belief that non-believers are inferior. THIS LEGALLY-CONDONED BIGOTRY IS THE REASON THE CURCH-STATE RELATIONSHIP IS BANNED BY THE U.S. CONSTITUTION.

>The Palenstinians (which you are going so far out of your way to avoid
>mentioning) are not only not citizens of the State of Israel, but also do not wish to be so <snip>

And why would they - so they can voluntary accept the church-state's claim to their inferiority? You're right, I avoided it for two reasons: First, the specific vicitmization is irrelevant - the mere fact that it exists is proof that individual rights aren't guaranteed. Second, there *are* many others more qualified than myself to beat that particular horse.

>Anyone else, or would you like the opportunity to pull your foot out of your mouth and not embarrass yourself any more?

Jerry, you seem intent on insulting me into submission. I'll pull my foot out of my mouth if you'll pull your head out of the sand. :)

<Lots of references to other folks destitute of rights>

>What pray tell is wrong with socialism in Israel? It's their country--let
>them run it.

Fine by me, but no socialist regime can logically be the ally of a free society. By funding their efforts, we are rewarding the Israeli government for its continuance of an immorality that is contrary to our own Constitution. Perhaps I should ask whether you believe in the basic concepts of the Constitution? Not that I really care - it's just difficult to understand your position, otherwise.

>You don't like your money going to *SOCIALISTS*? Too bad--better vote out
>those nasty folk who vote for the only operating democracy in the middle
>east.

I continue to try, but the majority always overrules me. This means that
51% of those who vote know either more or less than I do <g>. In any
event, numbers often breed mediocrity, so I don't mind standing with
the minority for now.

BTW, that "only operating democracy" is living proof that there are both
free and fascist democracies. At its worst, democracy is just another word
for mob rule.

>Here's a dollar Jack--buy a 100% American clue.

No, YOU buy a clue. Following is suggested reading:

Wealth of Nations - Adam Smith
Capitalism: The Unknown ideal - Ayn Rand
The Fedarilst - Alexander Hamilton, John Joy, James Madison
Democracy in America - Alexis de Tocqueville

Incidentally, I won't be commenting on this subject again unless you
really goad me on with an extraordinarily good flame. I warn you though,
it'll have to be better than what I've seen so far. :)

73, (No, really, I mean it <g>)

Source record: 243703

Jason L. (jasonl@cts.com) recently wrote
in <DAK390.7AK@crash.cts.com>:

: Fact is, in the case of SoCal, UHF repeater pairs are
: exhausted. We don't NEED any more repeaters. Most of the
: damn things sit unused 80% of the time anyway. It is not
: necessary for every freakin' group to be represented
: by a repeater.

: Think of how VALUABLE the UHF spectrum is. Why, the FCC could
: auction off our channels for millions of dollars to private
: concerns.

Looks like you have hit on the scam. 80% of the band is being warehoused
by the amateur speculators. Rather than coordinate, the speculators buy
and sell. Easier to do this if there are no users to complain. How else
can a two hundred dollar clunk box on Santiago Peak go for Twenty Thousand.

There are over thirty of these 440 warehouses on that mountain range.

I agree the community does not need more repeaters, they aren't using what
is out there already. Fill up those warehouses with activity. The activity
is what gives value to the amateur service in exchange for use of the
coordinated frequencies. Take the speculation out and activity builds
fast, Look what happened to SoCal 2 meters as well as 222 when they were
reorganized. Activity!

ok Roger et. al. How does the amateur community repopulate these warehouses?

Bob

5788. Mt. Wilson Inteference w/CD player

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-25 00:00:00 UTC
From: mtadog@aol.com
Message-ID: <3sla01$lvq@newsbf02.news.aol.com>
Source record: 243705

Last weekend as I was driving up Angeles Crest to Mt. Wilson for sightseeing I noticed my cae CD player starting to skip. First it would stop in the middle of a track; then it would skip to the beginning of the track; and then back to the beginning of the CD. As I turned onto Mt. Wilson access road (5miles from the top) the sound was all garbled and it made no music and I thought it was cooked. When I got to where all tha antennas are and parked and tried to set the alarm, it was dead also. I could figure the radio transmitter on my keychain was being affected by all the huge radio masts on the hill. But it wasn't until I got back down the mountain that I tried my CD again and it worked fine!
Can any of you radio guys explain what happened?

5789. cw xtl for HW101 needed

Source record: 243707

gregory brown (gbrown@unlinfo.unl.edu) wrote:
: Shawn C. Masters (smasters@bzy.gmu.edu) wrote:
: "Obsolete. a) no longer in use. b) of a kind or style no longer
: current."

Definitions are kinda like statistics. Keep looking long enough and
you'll find one that says what you want. Thank you though for making a
descriptive explination of your meaning.

: What you mean is "Morse is not current state-of-the-art technology."
: So what? Neither is SSB, ATV, SSTV, RTTY, AMSAT, FM, internal
: combustion engines, sail boats, lawn chairs, or sex.

Yes, but in many cases these modes are economically desirable. This
will change with time, as new equipment becomes cheaper.

: : Mathematically, CW is dead.

: Huh? I think we'll all have to think about that one for a while.

CW is no better then any other digital mode, mathematically. That's
all it means.

: : By going to m-ary, coherent FSK
: : the digital mode can get through where CW can't (10^-5 compared to 10^-1
: : error rates).

: Well, not being a technowiz, I can't dispute this. But who ya gonna
: communicate with? If communicating is your aim, using a mode that is
: "oldfashioned" and in widespread use seems more efficient than using
: a mode that only a few technophiles understand or use. What's the
: antonym of "obsolete"?

I would rather talk to those people that are using other modes. If
your aim is communicating, why not use the land lines already in place.
I can make up a 900 number that would act like HF CW or SSB voice. You
could go up or down in freq by using the keypad. We could even simulate it
with some changes in IRC. My aim is to design, build and experiment, so I
can advance my own knowledge.

: And I know this might be a bit picky, but darn it Shawn, it's Amateur,
: NOT Amatuer. I can accept people who don't use code as "real hams".
: I have no trouble accepting no-code Techs as "real hams". Heck, I'll
: even accept an "appliance operator" (as long as he or she is a good
: operator). But I have a real problem with a guy who consistantly
: miss-spells "Amatuer" (sic).

Excuse me, but beign an engineer the spelling part of my brain was damaged somewhere in E&M class, and I haven't upgraded my news reader to work with ispell yet.

Brian Carling (brian.carling@acenet.com) wrote:
: Newsgroups: rec.radio.amateur.misc
: From: brian.carling@acenet.com
: SCM>jeffrey@math.hawaii.edu wrote:
: SCM>: smasters@bzy.gmu.edu (Shawn C. Masters) writes:

: THIS seems to be a common factor for quite a few of the newer hams like
: yourself Shawn. Why get a license if you don't like talking with hams?
: Or maybe it's just living in the D.C. 'burbs that is making you hostile!

As I said before, I got my license to design, build and experiment.
If I wanted to communicate, I'd use the internet.

: SCM> and I don't think my views on religon or
: SCM>politics are fair game for a QSO either.

: Then what DO you want to talk about?

Discussion of those topics tends to bring some people over the brink
of decency due to nature of the beliefs. For that reason it should be avoided
over amatuer radio. Some politics may be OK, but most fall into the
category that religon goes in. No matter what you say, the other person
still retains their beliefs, as do you. All you've acomplished is to spout
words and raise blood pressure.

: SCM>Once in a while I'll run across
: SCM>someone that is interesting, but it's few and far between.

: So do they have to be someone who thinks like you? Or what?

No, not at all. They have to be someone that doesn't sit there
talking about their rigs, and only their rigs. I really don't care
what someone bought to communicate with me. Unfortunatly, many hams
have this nagging need to measure up to anyone they come in contact with.
Now if they want to talk about how they built something their using, I'm all
ears and kudos for them.

: SCM> Personally I enjoy building, experimenting, and digital
: SCM>communications. When I finnish this master thesis I'm most likly start
: SCM>doing more.

: Ah you are too smart for the average ham, no doubt!

I never said that, and I don't think a degree equates intelligence,
just time spent and a base of knowledge obtained. As for my statement,
a thesis tends to absorb free time. I only spend time on usenet as a
diversion I can take at any time, for any length I need.

: SCM>In the mean time, for talk, the internet is a much better
: SCM>way to go,

: ROTFLL! I am surprised to hear you say THAT! Maybe you have never tried
: ragchewing with someone half way around the world on SSB or CW!

No, I have never tried it. I've watched other do it, and I find
that it looks like someone elses hobby, not mine. Also, if you like the
challenge included in those mode, I'm sure we can make an internet app
work the same way.

: SCM> Much of my RF work is for autonmous control of helocopters, so I'm
: SCM>a little senstive to this.

: Ah yes, great ... because those little devices can't say anything back
: to you!

It's comments like this that bring discussions to points where
nothing useful is gained. Stop baiting, and start discussing. Where
is the defense of your viewpoint? All I see is the start of a flame.

: SCM>What it highlights though is the ability of
: SCM>digital to guarentee a delivery.

: Without any back talk, eh?! :-)

: And you are getting a MASTERS? Obviously not in English Composition!

No, I'm not. One of the reasons I've been getting more involved
with usenet is to improve my on the fly grammar and spelling. While it
still is not the best, I am improving.

: SCM> You and a few other people are making an assumption that all people
: SCM>enjoy CW. Guess what, some do some don't, and I'm one that don't. I'll
: SCM>stick with the digital stuff, and do my communicating on the internet.

: No one said that everyone does enjoy CW, but I believe that everyone
: that has the patience Can enjoy it! Who said everyone does? I haven't
: seen one message on here claiming that! Can you supply a quote?
: I thought not!

I've gotten personal e-mail that begged me to try CW, because it's
addictive. There have been a few people who have posted much the same early
on. It may have not been you, but statements about why would anyone get
a ham license if they didn't want to use CW, are examples.

: You seem to have a slightly intolerant attitude toward your fellow
: amateurs for some reason. Were you beaten up on by a ham once or what?
: Maybe you and Dana should go fight it out! :-)

Actually, I got into this thread to respond to claims that CW
is a superior mode to all others. While this doesn't get brought up as
much anymore, I've kept up with the discussion. Unfortunatly, my messages
have been creativly deleted, as is anyone's right, to make me sound much
more inflamatory then I intended. This is most likly due to key phrases
stricking them more then others.

73,
Shawn

Brian Carling (brian.carling@acenet.com) wrote:
: Shawn C. Masters writes:

: SCM> Currently digital modes can use less bandwidth then CW, but no one
: SCM>has much interest in such a slow digital transmission. (60 WPM ~= 60 baud
: SCM>w/o compression)

: "Current" digital modes? I don't know of any such modes that are in use
: by amateurs on the HF bands! What are we talking here? Amtor? Pactor?
: Clover? RTTY? FSK? Or what? 60wpm using less bandwidth than CW uses
: at say 35 wpm? Is it really a throughput of 60 wpm? What about all of
: those multiple retries you get on these trendy modes? BTW - 60 wpm is
: not exactly lightning fast, but at least you get hard copy available.

No, none of the modes currently used by hams are that bandwidth
friendly. The main reason for this is that they are designed to work
with pre existing rigs, and reduce the cost of doing so. If you look at
ways of modulating RF directly, it isn't that expensive to build the rig
from scratch, and the mode can be customized for the channel, rather then
the audio channel that is then modulated.
Resends can't really be counted, since many human operators will
ask for a resend of a CW message if it was garbled. I just gave a a high
speed number for CW, to show how slow it is digitally. Not having to use
the mind to decode the data allows us to accept it at a higher rate. I
personally get bored with 1200 baud anymore. So of course digital will
require more bandwidth, we want to do more with it.

: Can you imagine one of our anti-CW "digital modes are better" friends
: on this newsgroup if he was in prison in Vietnam trying to spell
: out the word "T-O-R-T-U-R-E" with his eyelids blinking, using some
: high-speed digital encoding, like those prisoners did in morse
: in their televised interviews during the war? :-)

: Will that be 5 level baudot or 7 level ASCII for the reporters? :-)

: I say these true words (albeit in jest), BUT CW does have MANY uses!

If I were a pilot that flew over enemy borders, I would learn morse
code. I don't plan on putting myself in a situation where this might happen
in the immediate future, so this arguement doesn't really apply.

: And by the way Shawn, we have come a long way haven't we? In the 1970s
: and 1980s most of us went from being traditional radio amateurs to
: "appliance operators." It seems that in the 1990s, these appliance
: operators are now becoming "typist/word processors." Ah progress!

: I like CW paddles, microphones and meters that wiggle!

Fine, I don't. I agree many people have become appliance operators.
Personally, the only rig I own, that I use as I purchased it is an IC-2AT.
Everything else got pulled apart the moment it got in the house.

: The ONLY thing that excites me about any of these digital modes
: will be when they have digitized HF audio transmissions that
: are free of the effects of fading and QRM, that fit into a
: bandwidth as narrow as CW, but sound as good as plate modulated AM.
: THEN we can say we have improved things significantly.

: Newer is sometimes better, but not always...

What you ask for no mode will ever deliver. I think the lowest
reliable compression for voice is now at 2.4 Kbps. Of course, you could
always move up to VHF/UHF and get all the bandwidth you want:-).

But why do the manufacturers have to dictate what bands hams operate on?
My Elmer, WA6AIG, and his buddies ("Rag and Tech Net") built all their
own 220 gear back in the mid-60s (they had to - I don't believe there
was any commercial gear available [surplus mil gear excluded]); what
prevents today's VHF ops from doing the same?

>too. This guy transmits constantly from about 2PM to 2AM every day. I
>called him and asked him if there was any he could check his equipment,
>and he told me to "F*** off".

That wasn't very nice. I don't know what tone you took with him, of
course, a hostile tone often provokes a hostile response you know.
Still, amateurs should be sensitive to this issue, and should at
least try to be courteous about telling you to "F*** off". Unfortunately
for you, it's almost never the amateur's station that is at fault,
but the amateur becomes a victim too because he often gets unfairly
blamed for the problem.

>I called the FCC, and they explained the problem was that all my
>telephones, speakers, TVs, and radios were faulty, and I need to install
>filters on everthing. (That's a very expensive and painful proposition)
>I asked if they could check his transmission power or signal, and they
>said my situation was normal, and it's up to *me* to resolve it.

Alas, they are probably right. And they *know* they're right because
it's *their fault*. The FCC has had multiple opportunities to set RFI
susceptability standards for consumer equipment, but they've refused
to do so. Without being mandated to do so, the consumer electronics
manufacturers aren't going to spend the few cents per unit it would
cost to properly bypass their equipment against the effects of fundamental
overload. That's what the problem you have with the loudspeakers, motion
detectors, cordless phone, etc is called. They are simply not rejecting
the, probably perfectly legal, amateur transmissions as they are supposed
to do. That's probably the case with the TV too, but the FM radio bothers
me a bit. That *could* be harmonic radiation from the amateur station.
Then again, maybe not, it could also be mixing in the receiver front end.
This is called intermod, and is a receiver design problem too. Too bad
you weren't able to establish a good relationship with the amateur, he
could have been a big help in resolving your problems.

>I think the time and money I'd have to spend to replace all audio cables
>in the house and filter every radio, VCR, phone, etc. -- would be better
>spent on a frequency scanner, amp, and transmitter. With not much power,
>I'm sure I could jam his signal. Irrational? Yes. But I might have to do
>it.
>Anyone have other alternatives?

>The FCC is proving useless.

Yes, it's irrational, and illegal too. The FCC will act, against you, if you try this. Most, maybe all, of the problems really are yours. Equipment that is not supposed to operate as a receiver *is* operating as a receiver. That's a design problem. It's possible the FM radio problem may be partially the amateur's fault, but the other problems definitely are not. This issue isn't going to go away until mandatory RFI susceptability standards are set for consumer electronics. The best thing you can do is call or write your Congressman and Senators and *demand* that they require the FCC to get off its butt and finally set such standards.

This isn't just a problem for amateurs and their neighbors. It's a problem for anyone living near a transmitter, commercial or amateur. Many consumer equipment manufacturers *will* send you a filter if you complain loud enough, and you should, but they aren't going to do a general fix until they are forced to do so. A few cents a unit over a multi-million unit run is real money, and they aren't going to spend it unless forced to do so.

Now there is also something else you can do immediately. Contact the ARRL, they're on the internet. They can put you in touch with a local RFI specialist (an amateur with a better attitude than your neighbor) who can aid you in resolving your RFI problems. The ARRL also has a book on RFI problems that explains why the problem happens in detail, and also outlines the steps you have to take to solve the problem in various types of consumer equipment.

Almost all of the problems *can* be fixed, and at not too great an expense. It is a hassle, but you should direct your anger toward the proper targets, the FCC and the consumer equipment manufacturers, not the probably perfectly legal amateur operator. Even if the amateur were running illegal power (unlikely, and remember he's allowed to run 1.5 kW which is a *lot*, over 250 times as much as a CBer (someone who is also often falsely maligned) and usually requires special 220 volt wiring and costs a *lot* of money), things in your house that weren't sold to you as receivers of shortwave signals *still* shouldn't be acting as receivers of shortwave signals. That's a consumer equipment design fault pure and simple.

I know it's hard to admit you've been "had" in your consumer purchases, but that's exactly what has happened. Consumers rarely ask about RFI susceptibility when making a purchase, and consumer equipment manufacturers know that. That's how they can get away with palming off shoddy merchandise on you. Complain long and loud to them about fundamental overload. Don't let them snow you. Make it plain you didn't buy a shortwave receiver, but by golly they sold you a shortwave receiver anyway and you want them to fix it.

Just console yourself with this thought, you could be living
near Dayton Ohio and the 5 *million* watt VOA station there.
You haven't even *dreamed* of the consumer equipment RFI
problems neighbors of that perfectly legal station had to
contend with for years. But you know, all of those problems
were fixable. It can be done, even under such extreme circumstances.
Well, they couldn't turn off their fluorescent lights, but then
they didn't have to plug them in either. (I had that problem
at an AM station where I once worked. I couldn't get the
pesky fluorescents to go out, and they pulsed with the beat
of the music. It was a disco light show that I *really*
didn't want. I finally had to replace them with incandescent
lights.) Hey, sometimes you're the windshield, sometimes
you're the bug. That's the way it goes, nothing's perfect.

Message-ID: <3sjk81$eal@ixnews4.ix.netcom.com>
Source record: 243873

Is there a newsgroup or other internet resource for the General Mobile Radio Service. I have only seen radios of this type listed in Radio Shack cats. I believe repeaters can be used and upto 50 watts (Radio Shack's units are max 2 watts). Where can I get more info?

Thanks, Don

While your handling of the facts about RFI were quite accurate, and your feelings about the FCC's lack of a consumer product RFI rejection standard was a bullseye, you were off when it came to the VOA operation as an example.

The Bethany, OH site was shutdown earlier this year. If I remember correctly it maintained 4 active transmitters, 2 250kW, and 2 100kW. While an E.R.P. of 5 Megawatts is quite easy to do from a 250kW unit, it still only represents a calculation of all power after antenna gain, and most of the power is in the front lobe. When all 4 transmitters were going, each running on arrays pointing in different directions, there was a hell of a lot more than 5 Megawatts floating around there if you were centered in any of the lobes.

WWCR claims a 2.2 Megawatt ERP for each of its 100kW Contenental transmitters via Rhombic antennas while WRNO claims 3.6 Megawatts from its 100kW Harris through its beam. WWCR covers better, even with lower ERP, because the antenna has a much wider pattern angle, but also a much lower radiation angle well.

The big problem today is outside of Birmingham, AL, where WEWN currently operates with a 500kw transmitter. I have no idea what the ERP is but as far as I know they do not pump all the power they can out of it due to RFI complaints from the neighbors. Rumor has it they want to sell the albatros and buy something smaller.

SCM> I'll give you all of that. That's why it has been so successful in
SCM>history.

SCM> Currently digital modes can use less bandwidth then CW, but no one
SCM>has much interest in such a slow digital transmission. (60 WPM ~= 60 baud
SCM>w/o compression)

SNIP

"Current" digital modes? I don't know of any such modes that are in use
by amateurs on the HF bands! What are we talking here? Amtor? Pactor?
Clover? RTTY? FSK? Or what? 60wpm using less bandwidth than CW uses
at say 35 wpm? Is it really a throughput of 60 wpm? What about all of
those multiple retries you get on these trendy modes? BTW - 60 wpm is
not exactly lightning fast, but at least you get hard copy available.

Can you imagine one of our anti-CW "digital modes are better" friends
on this newsgroup if he was in prison in Vietnam trying to spell
out the word "T-O-R-T-U-R-E" with his eyelids blinking, using some
high-speed digital encoding, like those prisoners did in morse
in their televised interviews during the war? :-)

Will that be 5 level baudot or 7 level ASCII for the reporters? :-)

I say these true words (albeit in jest), BUT CW does have MANY uses!

And by the way Shawn, we have come a long way haven't we? In the 1970s
and 1980s most of us went from being traditional radio amateurs to
"appliance operators." It seems that in the 1990s, these appliance
operators are now becoming "typist/word processors." Ah progress!

I like CW paddles, microphones and meters that wiggle!

The ONLY thing that excites me about any of these digital modes
will be when they have digitized HF audio transmissions that
are free of the effects of fading and QRM, that fit into a

bandwidth as narrow as CW, but sound as good as plate modulated AM.
THEN we can say we have improved things significantly.

Newer is sometimes better, but not always...

5802. CW is here to stay !!

More Roskilde information at
http://www.sjoki.uta.fi/~latvis/huvit/festival/roskilde.html

ROSKILDE NEWSLETTER No. 11/95

NEWSLETTER No. 11/95

June 26, 1995

THE ROSKILDE STATION IS READY at several
frequencies

- the Festival will Improve its Service

Roskilde Festival will have its own radio station - and the audience in
encouraged to bring their
small FM pocket radios and their ear plugs.

In cooperation with RADIO ROSKILDE the festival has built up a radio station at
the festival
site. The station will be transmitting day and night from Monday (June 26th) to
Monday (July
3rd). In the Roskilde region you can catch the festival station at FM 97.8 - as
well as at Radio
Roskilde's other frequencies (104.1 MHz, 105.7 MHz and 107.7 MHz).

The festival station is primarily intended for the audience when there is no
music from the stages.
It does also provide the possibility, however, that all those who did not
manage to get a ticket can
keep up with life at Roskilde Festival.

The traffic situation in the Roskilde region will also be followed closely. "So
remember to turn on
you car radio when you drive in the area", say editor Carsten Sivertsen from
Radio Roskilde.
Further details can be obtained by phone no. + 45-4235 8500.

The other station is ready too. The one with railway service. From Roskilde
comes an urgent
request: TAKE THE TRAIN -and save chaos on the roads.

And please note -again- that the festival is totally sold out and that NO
TICKETS will be sold at
the entrances. The organizers urge the audience not to buy tickets from people
"in the street".

The festival's camping site opens on Tuesday, June 27th at 08.00. The actual festival site opens
on Thursday, June 29th at 17.00. Up to this hour the traffic is expected to be extremely heavy.
The audience is therefore urged to make for Roskilde several hours in advance of desired arrival
time.

: : Merge the CW questions with the theory questions and score
: : the composite at 75%. That would eliminate the pass/fail
: : aspect of CW that no other mode currently has.
: : That's the real issue...why should any one mode hacve the
: : pass/fail status (again, beyond the requirements of international
: : treaty) that CW has as a gateway to most HF operation?

: That's a good question, but it stops short. What you should be asking
: is why the international treaty (the signators thereto) want a Morse
: requirement.

But there's no international requirement for any particular speed.
The 5 wpm totally complies with the international treaty. In fact,
one could do morse at 1 wpm and meet the inyternational treaty.

: You are assuming it is some arbitrary standard or
: blatant hazing...

The standard in the USA requiring 13wpm for the vast majority of
HF access is, as you say, now little more than a hazing. I agree.

: in fact others have labeled the FCC's continued
: testing for Morse as just that---hazing.

Ditto above.

: So you're left with two
: possible scenarios: 1) International representatives to ITU believe
: that Morse is an important component of international communications,

Ah, but there's even the crack in the dam at that level if you
acknowledge that no ITU requirement exists for any particular
speed of morse. Add to that the international treaty may
change anyway at the next opportunity.

: or 2) there is a major international conspiracy underway who's purpose
: is to keep all of America's brightest electronic wizards (who of
: course think Morse is stupid) out of Amateur Radio. Hmmmm.

I'll leave conspiracy theory to others :-) Let's just say
I believe the CW testing today is no longer relavent to a
majority of hams, nor is it needed for any emergency
basis even if one confines the emergency situation to
only ham band communications.

: Can you state with certainty that the same folks who want HF 'phone access
: without CW, won't shortly also want the CW bands for 'phone?

No I can't, but that isn't the issue is it. Reality check - The only guarantees in life are death and taxes. Use of CW bands (by the way, no such CW bands exist except at 50 and 144MHz) for other than CW goes on today anyway. Go to Canada and there's no separate phone/CW, so what makes us (the USA) any different? Frankly, if you want a CW only segment for each of the HF bands I'd support you on that. How about the first 25KHz of each of the non-WARC bands neing designated manual morse ONLY? I'll sign on in support.

Leon
Like you, I have a 2410 in my van and really liked it, but wanted to get a remote head unit for my Mitsubishi 4wd. Being an ICOM fan, the 2700 really caught my eye at the Dallas Hamcomm last year. That's where it was introduced and I couldn't resist!!.

I appears to have more intermod than the 2410, but I don't drive the van in town much so it really isn't exposed to the same RF environment. (Some of the local pagers are located in town rather than on the mountain and are running about 1KW to a gain array..) Anyhow, I also noticed how extremely sensitive it is and so I am now using it on a 1/4 wave dual band antenna - the kind that look like a cellular antenna. It hears everything and the intermod is dramatically reduced.

Bottom line: I really love the 2700 and it's features. I use it everday going to work and like it better than the 2410 because of the features.

Hope you have good luck with whatever you buy.

PS I sent mine to ICOM to check on the intermod and Gary went thru it with a fine tooth comb. Said it was right on specs. Great ICOM service and a real feeling of confidence with the radio after they looked at it.

>Joe KB2SFT

Sorry, no such luck. There are two ways I know of to make my W2A find
the correct CTCSS tone. 1st, using SET while in VFO mode, you can go
through each tone setting and transmitting and setting and
transmitting until you find the right tone. (Pain in the ...)

Or, if you're lucky enough to catch a strong station on the input, set
your VFO there and put your radio in T SQL (tone squelch) mode. You
should hear nothing, but the green recieve light will come on when
this station is transmitting. Now go to SET and get to the tone
function, when the green light comes on, spin the top knob until your
radio un-squelches. Note the tone. You now know what tone others are
using to get in.

I use this second method to find the tone being transmitted out by the
local police repeaters. Then I save T SQL in that memory slot with
the correct PL. Now I never have to listen to the repeater ID (it
goes out un-toned) or cross-modulation products while scanning.

Hope this helps,
Mike Groves KD6PKJ

Hello there.
It seems that this is an appropriate group whithin which to ask for help. So here goes.

We (a public safety agency) would like to have a mobile repeating system in one of our vehicles that receives VHF and repeats out on UHF and vice versa. We know that we can do this with a little wiring and such for one channel, but we would like to be able to do it with more than one. Do any of you know of a product or means by which to do this? (technical stuff to follow)

It would go something like this. For multiple channels imagine these in parallel...

Thanks!!!!

The above method works pretty well, except the station usually has to be pretty close (especially if you're using the rubber duck). Another technique that works sometimes is doing the same thing with the repeater _output_. Since many repeaters with PL-tone access (at least that I've seen) OUTPUT the tone too, the same thing can usually be done. I have done this successfully with several repeaters. And if this doesn't work, try a tone of 162.2 Hz. It seems to be fairly common on open repeaters.

Good luck!

>
>What's the best (legal) way to shut these guys down nowadays? Anyone had
>any recent experience with this?

Jack (WB3U),

In a local electronics store I found an RF amplifier (5W in - 100W out)
which coverage from 3 to 29 MHz, obviously for the CB market. I believe
this equipment to be illegal. I called the FCC (DC) and they said to
contact the field office (Atlanta) which I did. Atlanta said to sent a
letter to the Engineer in Charge, which I did. Results? Nothing that I'm
aware of to date. But hey, it's only been a month or two (if it still
there) and the FCC is likely spending its resources justifying its current
role to congress. The FCC isn't all that large.

So, here's a proposed solution - why don't hams put together a plan
to "re-capture" the CB frequencies. I understand CB, like much of the
spectrum was once ours. We could generate a whole new class of calls - say
Two by Fours (KA0AAAA), pun intended. If they don't get a license we
could, legally of course, take the illegal equipment and sell it to someone
with the right ticket (have it destroyed?) - providing the monies to the
CB'er or the new "National CB Liberation Fund" to cover expenses. When
they do get licensed, we could assure that the excessive RF power
generation equipment is not used or held hostage until they upgrade to a
band where they can use it properly.

Hummm. This would provide CB'er with a better stepping stone to the ham
bands so we all don't groan as much when they arrive. i.e., they can
practive good ops (well . . . maybe "better ops") on CB before showing up
on the local repeater. It provides them "radio growth". They, at least
one I'm sure, has a ham mindset now. Maybe they can be taught to be
self-policing? Then again, the CB problem maybe just to big for hams to
bite.

No flames please - this is just a concept,
Walt

I had a reciprocal lic. in 1991. The process was simple. Just take a copy
of you US lic. to the local Radio Commission office and for about $30 Aus
and a 30 minute wait you should have a lic. I found the office in Canberra
to be very helpful and even gave me a list of repeaters and other nice to
know information. Just look them up in the local phone book.

Would not hurt to give the ARRL a call. They have the paperwork to get
your lic. prior to going but told me that I could get it on a walk in
basis.

can't get in because there is a PL tone, is there some way that I can find
out what the PL is, using the equipment that I have on the radio? I've

You can use the CTCSS decode feature to detect which tone is used but
this only applies if (1) You are close enough to the sender to listen
on the input frequency or (2) The repeater passes or reconstructs the
CTCSS tone on output. In use, you'd start with your best guess and
listen to see if it decodes. If it does not then you'd set your next
best guess and try again.

I like my W2A a lot but I want to warn you to be VERY careful with it.
The battery rails are fragile and will snap off if the radio is dropped
or otherwise mechanically stressed.

>dating service.

Well, let's take this "Why would anyone who doesn't expect to <fill this in>
want to become a ham?" question and fill the blank in with each of the
following items:

operate QRP
pass NTS traffic
experiment with spread spectrum
operate packet
operate voice
operate QRO
build antennas
operate ATV
operate RTTY
operate contests
chase DX
operate VHF/UHF simplex
operate VHF/UHF repeaters
operate microwave bands
repair modern commercial amateur equipment
build their own equipment

... you can probably add a few of your own (hint: pick a few things that don't
interest you but do interest other amateurs).

In other words, there are a great many things that make up amateur radio,
and each and every one of them has enthusiasts. Elevating your own interests
above those of others simply doesn't wash.

>If the folks complaining about this got off the 'Net and on the air,
>it wouldn't even be an issue.

Not true. Heck, I primarily used CW this weekend for Field Day. I had a good
time, but it doesn't stop me from stating that the Morse code requirements
should be reformed. Not everyone who wants to change the CW requirements
in USA is is an anti-CW malcontent, but I've seen many statements attempting
to imply this. It simply isn't true.

As your diagram indicates you are using Maxtrac radios, there is an easy solution.

1. If your radios are of newer vintage, the Maxtrac will have a black 16 pin accessory plug on the back of the radio. If this is the case, Motorola makes a very elegant solution called RICK. The RICK is a repeater controller that will connect the two Maxtrac's together via the accessory jack and viola....you have a full function UHF-VHF repeater. You can use your choice of channels that are programmed into the two Maxtrac's (UHF & VHF) with the appropriate warning regarding authorized use of your liscensed frequencies. With the RICK you can manually turn the repeat mode on and off so that the mobiles can be used as normal or as a repeater.

2. If your radios have the older five pin white accessory connector, you can still use a RICK, but the switching will be done via Voice Activation (VOX). This is a less optimal solution. If you have five pin radios I would recommend a Zeotron Repeaterman Controller (a bit mor copmlicated to connect) that will work similiarly to the RICK as described in Item 1, but also allows for two P.L.'s, Courtesy Tones and DTMF changeable P.L.

Both solutions should cost less than $ 500.00 if you include labor to install. I can refer you to a source to purchase if you are interested.

Hope this helps.

5829. Cable TV interference on 6M

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-26 00:00:00 UTC
From: fedpress@omnifest.uwm.edu
Message-ID: <3sn8ct$43l@omnifest.uwm.edu>
Source record: 243655

When I got on 6M recently (with 100W from an IC-551D to a Diamond vertical), I experienced the traditional TVI/phone RFI problems. A round of filters cured the problem for all the neighbors but one. She still hears me on her cable TV audio, and to a lesser degree she and her downstairs neighbor hear me on their phones. When she called the cable TV company to investigate, they just told her to report me to the FCC!

Anyway, we've finally got the cable TV company (Warner) to agree to send somebody out to check their cable. In case I'm able to observe, can anyone out there tell me what sort of inspection the cable TV guys should do? (What sort of equipment, meters, etc.)

Who doesn't have free speech in Israel, other than Kahane Chai? (If you're complaining about their loss of free speech then we have nothing to talk about.) I am curious to find out.

Who is being coerced or defrauded in Israel, Jack? Can you at least provide a characterization of the victim, or are you simply a deluded moron who has this need to slander an entire country without any support?

>>There is a difference between Israeli and non-Israeli citizens. All
>>Israeli citizens have freedom-of-religion.
>Nonsense. Freedom-of-religion requires more than simply being permitted to
>gather and speak as one chooses. I will remind you that the Israeli
>government was established to create a self-governing homeland for Jews,
>and to prevent their persecution. It is impossible to separate either the
>government or this goal from the tenets of Judaic culture and religion, and
>like most religions, one aspect of this is the belief that non-believers
>are inferior. THIS LEGALLY-CONDONED BIGOTRY IS THE REASON THE CURCH-STATE
>RELATIONSHIP IS BANNED BY THE U.S. CONSTITUTION.

??? You are permanently deluded, Jack. Either that, or you are a screaming anti-Semite, and would find a nice home on 14.313. If you know anything about Israeli society, you would know that the Ministry of Religion has little effect on day-to-day Israeli life. Also note that no Christians or Muslims in Israel are the victims of state-sanctioned religious action. There are state-recognized religious officers, but we have that here in the US (To wit: only state-recognized clergy in the US can perform marriages.)

I would like you to provide a solid piece of evidence that Israel condones bigotry against non-Jews. Put up or shut up.

>And why would they - so they can voluntary accept the church-state's claim
>to their inferiority? You're right, I avoided it for two reasons: First,

Can you provide any evidence to support your claim that Israel has a state-sanctioned mandate that non-Jews are inferior, or are you just a screaming complete moron?

>the specific vicitmization is irrelevant - the mere fact that it exists is
>proof that individual rights aren't guaranteed. Second, there *are* many
>others more qualified than myself to beat that particular horse.

It doesn't exist--you can't provide any proof for it, just lies and bile.

>Jerry, you seem intent on insulting me into submission. I'll pull my foot
>out of my mouth if you'll pull your head out of the sand. :)

I am waiting for you to provide me with one shred of evidence that there is state-sanctioned anti-non-Jewish activity in Israel.

When you stop lying and saying stupid things, I'll stop calling you a liar and a moron.

>Fine by me, but no socialist regime can logically be the ally of a free
>society. By funding their efforts, we are rewarding the Israeli

You are full of it. Norway is a US ally. Britain is half-socialist by this point. France is nominally a US ally, and certainly was while it was fully socialist. You don't have any proof of your statements. And, as you may have figured out, sovereign states act in their own interest, which may logically follow from facts you do not have. Go take a course in international politics and then restate your opinion.

>BTW, that "only operating democracy" is living proof that there are both
>free and fascist democracies. At its worst, democracy is just another word
>for mob rule.

??? I await your proof that Israel is a fascist state by stating specific events that make it so. You made the outrageous claim that Israel is fascist (before it was socialist. I guess that makes Israel the only fascist-socialist state in the world with an operating democracy!) so the burden is on you to prove it.

If you can't prove it, I offer you a second chance to back down and remove your foot from your mouth in private. Put up or shut up.

> Wealth of Nations - Adam Smith

Read it.

> Capitalism: The Unknown ideal - Ayn Rand

Ahh...an Ayn Randroid. That explains *a lot*

> The Fedarilst - Alexander Hamilton, John Joy, James Madison

Read them twice--in high school civics class and again in political philosophy courses in university.

> Democracy in America - Alexis de Tocqueville

See above. Maybe you'd also have me read _Protocols of the Elders of Zion_ while you're at it? (Skimmed it.)

While you're there, expand your horizon: _Republic_, Plato; _The Prince_, Machiavelli; I don't have any good reading on 20th C. socialism except maybe Rosa Luxembourg or Lenin (so you can see what socialism is), maybe a good critique of what's out there is Bloom's _The Closing of the American Mind_, which befits you well.

>Incidentally, I won't be commenting on this subject again unless you
>*really* goad me on with an extraordinarily good flame. I warn you though,
>it'll have to be better than what I've seen so far. :)

Ohh...Here it is Jack: you can't come up with any evidence of your idiotic slanderous claims, and so you're going to back out. I encourage you to do so and avoid yourself further embarrassment. I don't enjoy flaming, Jack, nor have I begun.

5831. How to run QRO without producing RFI?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-26 00:00:00 UTC
From: pruth@ocvaxa.cc.oberlin.edu
Message-ID: <3smfif$bpb@news.cc.oberlin.edu>
Source record: 243657

Every time I transmit 500w via ground-mounted Butternut
vertical my neighbors' appliances turn on and off, they can
hear me through their stereo speakers, and it even lights
the panel lights of our stereo even when said stereo is OFF!
Is there a way to deliver a QRO signal in a rental complex
without producing these effects? Would a rooftop vertical or
horizontal wire eliminate the problem? I can use 100w output
without producing RFI, but would like to utilize QRO when
needed without bothering the neighbors. Thanks for your help.

>Yawn! But it is obvious you know what he meant.
>"Every" can sometimes be used to mean "almost every."
>I think you are just being picky because you couldn't answer his
>point and you knew he was right!

Brian, on the Usenet, we currently communicate by written word.
Jeff said "every HF-licensed ham", and that is pretty clear.
If Jeff meant "almost every", then Jeff has to write "almost every".
Picky? Maybe, but the assertion was clearly in error; I remember
seeing a recent note from you suggesting to Gary Coffman that
coherent CW is also OOK Morse, which some might say is being
comparably picky.

>At least HE didn't resort to name-calling!

#1: I wrote a flame last week. I don't flame very often. If
I'm now some bad person in your eyes as a result of one (fairly
mild) flame, then I assert "I think you are just being picky
because you couldn't answer my point and you I am right". That's
right, those are essentially your own words. :-)

#2. Jeff has indeed resorted to name calling in the past, but
you're pretty new around here and haven't seen it.

brian.carling@acenet.com (Brian Carling) writes:

>But Matthew who ever said that amateur radio is a technical competition
>to see who has the cleverest digital encoding / decoding scheme?

i was simply responding to the "challenge" as put forward. whether or
not ham radio is a technical competition is beside this point -- though
i will agree it is not.

>That is why so many hams enjoy CW, rather then spending hours moaning about
>CW and attacking those who DO enjoy it!

well, again, i was only responding to the challenge ...

but i can't help but "feel" for the anti-CW-testing crowd, simply because their
arguments bear signifigant logical weight. and none of them, as far as i can
see, are hell-bent on totally abolishing CW -- just the testing requirement.

furthermore, i see no one attacking the ardent CWers for what they prefer to
do -- just some of their wild statements, saying things like CW
can-get-the-message-through-when-no-other-mode-can, or the inability on the
part of some members to differentiate between "anti-CW" and "anti-testing".

[quoting out of order]

>It is a HOBBY! It is supposed to be fun!

well, to be honest, my kind of fun doesn't include hammering away on a key,
tapping out messages in the Code of Morse. i don't deny its fun for a fair
number of people -- the audio twinkling of the HF ham bands is proof enough
of that. nor do i deny the utility of CW in some situations; who hasn't
honked out messages to the car that just cut them off?

but as a sole requirement for access to a particular chunk of spectrum (as it
is in Canada)? seems bizarre.

of course, i may be biased. if the anti-testing people win, i won't have
to re-program my brain. :-)

Source record: 243661

RR>
RR>That's my point. If it is of interest to just about everyone, then
RR>commercial publishers can and will publish it (if ARRL does not beat
RR>them to it). ARRL should sell the rights to the Handbook and other
RR>best sellers to commercial publishers and concentrate on
RR>publications like QEX that are necessary but not lucrative. The
RR>analogy here is to Public Broadcasting. Their function is not to
RR>maximize ratings; that is what the big 3 networks do. PBS is not
RR>the 4th network. ARRL should not be yet another publisher.
RR>

Hi Rick,

That approach strikes me as counterproductive. It is the "best sellers" which help support the ability to publish the less popular works. Without the revenue from the "Handbook" or the Repeater Directory, ARRL couldn't afford to publish many of the others which are "less lucrative" (perhaps even money-losers).

An analogy might be college level sports, where revenue from the men's football program helps fund other valuable sports programs which are important but do not generate large admission receipts.

5836. HABET-6 now scheduled for July 1/2

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-26 00:00:00 UTC
From: wallio@dsm1.dsmnet.com
Message-ID: <3sn2fa$6g@dsm6.dsmnet.com>
Source record: 243662

HABET-6 update on Monday, June 26th:

Our attempt to release HABET-6 on Saturday, June 24th, was aborted due to failure of the payload GPS receiver. A release on Sunday, June 25th, was scrubbed due to 100% overcast, moderate rain showers and a failure of both telephone lines at the launch site.

The GPS receiver and telephone lines are now ok. Six to ten-day weather forecasts are encouraging for next weekend (July 1-2). The inflated balloon is resting in our hanger. All payload experiments are working and ready for flight.

HABET-6 is now scheduled for release on Saturday, July 1st, at 1400UTC (9:00AM CDT) slipping to Sunday, July 2nd, at 1400UTC if required. See detail below.

73, Ralph Wallio, W0RPK

Iowa State University (ISU)
Spacecraft Systems and Operations Laboratory (SSOL)
High Altitude Balloon Experiments in Technology (HABET)

HABET-6 Mission Announcement

HABET-6 : Saturday, July 1st, slipping to Sunday, July 2nd
DATE/TIME : Release 1400UTC (9:00CDT) on either day

HABET-6 : W0RPK QTH south of Des Moines, Iowa
RELEASE SITE: Coordinates 41d26.280mN 093d34.099mW

HABET-6 : Payload weight : 2.7kg (6-pounds)
LIFT INFO : Balloon : TOTEX TA-1200
: Helium : 5.1m^3 (180ft^3)
: Ascent rate : 213m/min (700ft/min)
: Max altitude : 32,300m (106,000ft)
: Max radio range: 640km (400sm)

HABET-6 : Packet Radio Downlink 446.375MHz 900mW
FREQUENCIES : Packet Radio Uplink 144.300MHz
AND MODES : Standard AX.25 1200BPS AFSK FM
: APRS-compatible NMEA-183 GPS navigation data
: Information beacons
: Open digipeating
: Voice Repeater Downlink 446.350MHz 900mW
: Voice Repeater Uplink 144.400MHz
: Open voice repeating with CW IDer
: All antennas vertically polarized

HABET-6 : 35mm camera taking exposures every few minutes
EXPERIMENTS : Expermental payload cut down mechanism

HABET-6 : W0RPK will make HABET-6 announcements and maintain
INFORMATION : a radio watch on 3.780MHz, 7.155MHz (LSB) and
NETS : 146.67MHz (Mingo, Iowa) before and during mission.

A brief note about HABET-5. The mission was released from the W0RPK QTH on Friday, May 19th, at 0939CDT. Maximum altitude was 26,444 meters (86,763 feet) ASL after ascending at an average rate of 5 meters per second (977 feet per minute). All payload experiments were successful and the payload was recovered early Friday afternoon. A HABET-5 700 record APRS history file is available on FTP.TAPR.ORG as /tapr/SIG/aprssig/upload/habet5.hst.

5837. ELMERS Needed

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-26 00:00:00 UTC
From: js@ibbs.anaheim.ca.us
Message-ID: <12@ibbs.anaheim.ca.us>
Source record: 243663

Here we go again. It is starting to look like the people that have been in ham radio for several years need to start "elmering" again, rather than flaming. I think that the old timers, I don't consider myself one since my license is only 9 years old, need to begin some information type articals. Teach people what the history of the code is, and why we don't let it die. Teach new people how to read a repeater directory. Dose anyone out there remember the ARRL Operators Manual? Has anyone but myself read it? Rather than talking about the questions and answers to the test, start talking about the concept behind them. Study the material in other words.

For example, dose anyone know why the California 440 repeater band is closed to the public by most owners? Cross ref a repeater list sometime. You will discover that most of the 440 repeaters are being used as control repeaters for 220 Mhz and down. Now look at the FCC regs regarding control of repeaters. You will notice that those regs are complied with. Would you open your control channal up to the public. I think not.

My whole point here is simple. For people that have had ham licenses for 5 years or less, shut up and learn. For the older hams, shut up and teach.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 JUNE AND FORECAST FOR 27 JUNE - 29 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 25 Jun
Daily Proton Fluence >1 MeV: 3.5E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.2E+08 (moderate)
X-ray background: A3.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 Jun 28 Jun 29 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 Jun: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 25 Jun
Learmonth 11 3333 2132
Fredericksburg 20 14
Planetary 25 13

Observed Kp for 25 Jun: 1032 3343
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 Jun 20 Active
28 Jun 20 Active
29 Jun 16 Active
COMMENT: IPS Geomagnetic Warning 17 was issued on 21 June and is
current for interval 26-30 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
26 Jun normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Jun normal fair poor
28 Jun normal fair poor
29 Jun normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
26 Jun 32 about 10% above predicted monthly values

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
27 Jun 5 About 10% below predicted monthly values
28 Jun 5 About 10% below predicted monthly values
29 Jun 10 Near predicted monthly values
COMMENT: IPS HF Communications Warning 20 was issued on 21 June and
is current for interval 26-28 June. MUFs at Townsville ranged from
15% below to 15% above predicted monthly values with spread F during
local night. MUFs at Hobart were 20% below predicted monthly values
with spread F during local night.

W6>Footnote: the same theme of "it's time for the Amateurs to stop
W6>playing" was heard recently from a County EMA official who said
W6>(of their ACS program which includes REACT personnel): the REACT
W6>responders are far more professional and disciplined than are the
W6>Amateurs" who waste time and energy on unrelated matters or talk."
W6>(Comment: Ouch - that hurts. Sounds like too much shop talk,
W6>reminiscing, flying decades old missions, and using "ham-speak"!)

while i have to agree that the type of attitude many operators of my area have (ie. talk of how bad their back is, when the next social security or medicare payment is coming as well as other subjects of incessant whining), i must STRONGLY disagree on the professionalism of REACT groups, mainly naming the ones in the san francisco / south bay areas of california. these guys out here are a bunch of low-life waste of space. their severe lack of professionalism is a disgrace to the entire REACT organization. i would fear for my well-being if they were to be the ones the counties of my area called upon for assistance in times of disaster or need.

[[EXAMNT6.26W : 3873 in EXAMNT6.26W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0200.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-594-0200 x0282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
203-594-0200 x0219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.

: the largest factor inhibiting progress. It takes a strong willed
: individual indeed to break the mold of entrenched myth and tradition.
: That is made harder when those entrenched myths are backed by government
: force.

: Gary

Nothing inherently wrong with that philosophy, Gary. When the strong-willed individuals succeed in developing modern methods and modes to the point where they are readily available to the amateur community (world wide), are in widespread use, and thus perhaps attain or surpass the current utility of Morse for international communications, I have no doubt that the ITU, ARRL, and FCC will drop the Morse requirements.

The simple fact that a technology exists means little if it is not available (for whatever reason). Communication requires the use of modes common to the community. The "entrenched myth and tradition" you speak of is nothing more than acceptance of this idea. Morse IS available, it's in widespread use world-wide, it's simple, and it works very well for international communications. IMO, that's most likely why the ITU continues to support the Morse requirement.

Or, of course, it COULD be a huge international conspiracy against the Morsephobic Super-Advanced Technowizards who are seen as a thread to the international straight-key market. Or could it be a plot by one of those Environmental Movements who are paranoid about what will happen to our land-fills if old TV's are no longer recycled into CW transmitters? :-0

5844. TNX FER FB CW DURING FD

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-26 00:00:00 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.804187329@melpar>
Source record: 243670

During Field Day this past weekend, I assisted with the
Loudoun (County, VA) Amateur Radio Group's contest effort by
spending several hours manning the 80 meter and 20 meter CW
positions using the call NC4S (I was a bit of an anacronism because
the other three CW ops {NC4S, N4PD, and W3GOI} all used keyers
while I used a bug).

During my air shifts I was impressed not only by the huge
number of CW stations on the air (guess the "2 points per CW QSO"
incentive really works) but by the quality of the vast majority of
the "fists" running at the 20-25 WPM level. Exchanges were crisp
and clean, making operating a real pleasure. N1NH was one station
which stood out, probably because we worked it on several bands and
because their category was *24A* (how in the world did you avoid
in-band interference with that many transmitters?), but there were
many, many others.

My sincerest thanks to all the fine CW ops who made my first
FD since 1958 a real pleasure.

73,

Paul, K4MSG

5845. C.W. defined (code forever et.al.)

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-26 00:00:00 UTC
From: Gerald Schmitt <ggs@aerie.lanl.gov>
Message-ID: <3sntok$pr6@newshost.lanl.gov>
Source record: 243671
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I am some what new to this Ham radio business I have been fascinated
by this religious debate on the merits of C.W.

Having now worked C.W. and experimented with other HF digital
modes and accumulated enough data to form my own opinions
I will don my flame suit and define C.W.

Considering data thru put rate signal to noise ratio and
ability to communicate I must conclude C.W. must mean

Completely Worthless

RTTY with or without DSP will put it in the toilet for getting
through. I can copy digital I cannot even hear. If I had to copy
code groups or a language I do not speak or anything else I could
not guess the major portion of I would not consider C.W. it can't
just can't compete. For reliable ACCURATE communication of difficult
data under poor conditions it isn't even close.

AS for being a lid filter anyone who believes that hasn't been on
parts of 75 or 20 meters. The clowns I have heard there make the
worst CBers seem like Landed Gentry by comparison. You want to
see reasonable polite and professional operators hit the satellites.
And no one (except RS-12) had to pass any code test to operate there.

In closing I must agree with Gary Coffman that it smacks of hazing.
"We had to do it so you have to." I passed slow code and I will
pass more because them's the rules but I doubt I will change my
opinion.

Just to spare you the cheap shots about my experiments with
HF digital; all were done completely within the rules.

So why should CW be removed from the testing ?
It is widely used throughout the world on Amateur Radio.
No-code HFers wouldn't be able to enjoy the fun of working amateurs
around the world on CW !

Call my reasons "quasi-rational" but where are all of the rational reasons
for dumping CW ? All I get are comebacks to my reasons for keeping it
but no defense for why it should be dumped. Just because some feel that
it is "old fashioned" or "Obsolete" ? C'mon ! It is still a very
widely used mode throughout the Amateur world.
I have agreed all along that it currently holds less weight in the test
compared to yesteryear and that it might be a good idea to downgrade its
importance on the test.

> You (and others) say that an amateur license should be "earned", but
> amateur licenses are not supposed to be *for sale*, whatever the
> currency used to pay for them, be it cash or labor. Amateur licensing

When ever did I IMPLY that earning one's HF privs equates to "buying
off" the right ? HF phone operation (all levels of Amateur licencing
for that matter) is indeed a privledge and currently requires EARNING
that privledge through testing. If that element is removed or reduced
in importance then operator competence may suffer keeping in mind that
CW doesn't have to be part of maintaining this competence thru testing.
Surely you are aware that giving away the right to use HF would be
catastrophic.

> that legitimate purpose of licensing today.
>

> Gary
> --

You must have missed half of this thread Gary...I've agreed with this
all along. I only maintain that CW currently plays a role in
maintaining a certain level of operator competence thru testing.
Outdated, obsolete...whatever...it continues to serve a purpose on the
test. Until the current testing is revised to exclude the need for CW
then it will of course continue to be part of the testing.
However, I believe that when it is decided that CW should go, the rest
of the test should be restructured and certain other elements such
as operating procedures should be included (or given more emphasis).
That is, if they simply remove CW altogether and leave status quo on the
rest of the test then it is my belief that an influx of operator
incompetence/ignorance will occur on the HF bands.

Uhh... what I am implying here is that the work involved in learning
CW and becoming proficient relates to ones desire to have the right to
use HF phone...it demonstrates a certain level of responsibility in an
indirect way. I understand your point though. That is why, like I've
been saying all along, downgrade its importance on the test...by all
means !
I'm just attempting to possibly validate its presence on testing for HF in
the 90's.

OOH... nice analogy there Gary !

Ya, like having to learn CW is like being whipped.
Having to use it is like slavery.
Grasp reality !

CW is not hard...just learn it !
It's actually fun. It's not meant to be a cursed roadblock on the route
the HF phone privs. What is the big problem ?
Perhaps it's relevence has been reduced but by no means is it something
that is too difficult to obtain.

I'm running out of daily time having to support CW in this never ending
debate...the redundancy of having to answer replies is killing my day.
(It seems to be ME against the anti-CW world.)
I must unfortunately refocus my time elsewhere.

I'll leave you with this though...
You must however ask yourself "why is it still an HF requirement ?"
and why is it that many countries are still currently voicing
thier support for it to the ITU ?
Why is it 1995 and technology has rendered CW "obsolete" for decades ?

I guess there is still a place for CW in the Amateur radio world !
By gosh...it's still highly used and even the mode of choice in many
countries. It can even be FUN ...ya...FUN to operate !
So I don't have to wonder why it is still with us.
Wnat to get on HF ? ...Just learn it ! (CW)

: smasters@bzy.gmu.edu (Shawn C. Masters) writes:
: >jeffrey@math.hawaii.edu wrote:

: But Shawn, don't blow off what I've said so quickly - here's why:
: We are the last line of communications for our city, county, state,
: and nation. This is demonstrated each year when hams are called upon
: to provide communications in place of professional systems distroyed
: due to Nature displaying her strength and fury. Because of this tre-
: mendous responsibility we carry (and this responsibility is one of the
: reasons for the existance of our service - see section 97.1 of the CFR)
: we should be able to demonstrate the ability to communicate with as little
: hardware as possible. We should be able to use our given senses in
: place of relying upon exotic equipment. Manually encoded CW, along with
: our sense of hearing and our mental powers, provides an unfailable means
: to conduct communications in any situation imaginable. Every HF amateur
: worldwide has a CW-capable transceiver at his/her fingertips. Now, V/UHF
: will not provide reliable communications for the passing of statewide,
: national and international traffic during times of *widespread* disaster,
: due to the limited propagation at those frequencies and because widespread
: power outages will disable repeaters (or their battery banks will even-
: tually die). Thus, all amateurs wishing to be awarded the privilege
: of operating below 30 MHz should fully meet the code requirements as
: set forth by the ITU. CW might not be everyone's mode of choice for
: their daily ham activities, but it must remain the common denominator
: of all hams worldwide.

While CW remains the lowest common mode in a failure ridden
situation, it also shows how little planning and prepration hams have done
to actually work emergencies. If that is what we are supposed to really
be preparing for, which I'll agree is a valuable part of the service,
shouldn't we be making plans that rely on things that are better then CW?
As an example, the DOD actually has backup plans incase of HF
failure. While we shouldn't worry about it, since this mean the
atmosphere has been heavily damaged, the method they use to get around it
is an example of VHF/UHF long haul traffic. If the atmosphere is
damaged, and the satellites taken out of service, meteors will still
fall into the remaining atmosphere enough to cause meteor scatter. This
system sends data via a burst transmission when the channel opens up.
Thus using high speed digital comm allows for traffic passing, even
when HF no longer works. Of course, as I said, we don't have to worry
about emergencies of this nature, since we'll most likly be dead.
If we are to provide emergency comm, shouldn't we have some
system to rely on instead of CW? A robust digital backbone
would not be that hard to set up. Couple that with sats and you have

quite a bit of communications capability.

73,
Shawn
KE4GHS

James Reese (jreese@neosoft.com) recently wrote
in <3sa0bb$40u@uuneo.neosoft.com>:

: Please stop portraying these repeater operators as the "Bad Guys". They just
: want to do their thing and be left alone. What's wrong with that?

There is nothing wrong as long as the groups who moved to 440 in the
sixties are still using the frequencies. The problem is many of the
frequencies are way too quiet. The twenty or thirty year old clunk box
repeater on the highest mtn is deaf or turned off most of the time as
there is no real group using the frequency today.

It is wrong to leave this situation alone. The Bad Guys are warehousing
useful spectrum. Should a coordination protect a these occasional uses
for years?

: Why can't _you guys_ move up to the bands where there's plenty of room and put
: on all your open systems? What makes 440 MHz so special?

SCRRBA has coordinated all three hundred 1280 MHz repeater channels. Many
are open while most trustees have chosen to allow members only. These
repeaters are newer and still have groups of hams associated. The 440 band
while active still has lots of repeater channels where there is no
perceptable activity ... nobody home ... they all left years ago.

Would you as a coordinator like to see an activity or have to protect a
dead clunk box repeater. Tough one isn't it ... hope your policy helps
guide your decisions.

Thanks to everyone who emailed me with some suggestions. Special thanks to Jack who went above and beyond the call of duty and helped to to determine it was not a ham operator at all --- merely a CB radio with almost certainly an illegal amplifier. After Jack pointed me in the right direction, everything made sense. I dusted off a portable CB radio and boom, the hamburger was chattering away on channel 13, pegging the needle with the antenna fully retracted. He told someone he couldnt "pump it up" right now as he didnt want to bleed over the neighbors TV right now... And, when my unpowered loudspeakers rectified .00001 % of the power he was pumping out, my CB speaker buzzed. So that's the story! Thanks to you great guys on the Net. I apologize for assuming the guy here was a ham!

Why, thank you. I wonder what I have to clean up? Do I have
a history of posting obscene or indecent notes, or notes which
stray from the newsgroup topic? Is it that I posted a single
note you found offensive? Good self policing requires that the
self police realize we're all human. I seem to recall your recent
arrival to the Usenet was not without flames :-).

>C'mon Dana, think about the large numbers of folks who scan these
>groups, wondering what ham radio is all about.

I wrote a note, it may have offended you. I read plenty of notes
that offend me, but I usually reserve the "clean it up" kind of
note until there is a consistent and ongoing pattern. Have
you seen such a pattern in my fairly long term tenure on the
Usenet?

I don't think my recent flame is any worse than some of the
recent anti-No-code notes on rec.radio.amateur.policy; I
look forward to your "Larry - please clean it up" now that
you're a net.cop ;-)

Harold, it is considered *poor form* to correct spelling errors then
cross-post the message. You should know better than that ! It's the same
thing as holding up a big sign that sez "FLAME ME". Someone usually will,
in this case me. No doudt you likely bought a "Bash Book" to learn how
to access the net, same way you got your ticket maybe ???

> Condor Connection? The correct name is the "ZIA Link". Maybe ZIA means Condor
> in some language somewhere....

Yup ! See page 36 of the 1995 Repeater Location Guide for California,
Nevada, Utah, *and* A R I Z O N A ... (Did I spell it right that time ?)
The Condor connection is a 220 mhz linked system, I suppose "ZIA" is
something all you former/current CB's on 2 meters set up...

> The link extends from El Paso west to Yuma, AZ - it does not go to L.A.

But how about when "skips-in" on 2 meters ??? <<snicker>> Does it
get to those poor people in LA then ?

>Can you state with certainty that the same folks who want HF 'phone access
>without CW, won't shortly also want the CW bands for 'phone?

That's been my concern from day one, and mind you I'm not opposed to dropping the code requirement for HF access. But eliminating the code will certainly result in more crowded bands, and it won't be long before the phone subbands are bursting at the seams. What next?

I promised myself I wouldn't get wrapped up in the CW debate, but I will say this: there are fewer bozos/kHz on CW than on SSB. Far fewer. Does that mean that CW operators are "better hams" than phone ops? Of course not. It's just harder to be a bozo on CW. Harder to throw in witty, snide remarks, harder to shout quick, one-word obscenities. CW just doesn't convey it the way phone does. It's too much work. So I hope that someday folks can enjoy HF operating without having to learn the code, but I also hope (really really hope) that there will always be a CW subband where folks can go for an enjoyable QSO without having to put up with the frequency owners, frequency cops, usless nets, (some of them are) and foul-mouthed no-goods so often heard on phone. Sometimes you just need a breath of fresh air...

>pieces of urban folklore in the post-modern era that I would like to
>dispell. Don't even talk to me about golden ears:-).

But Shawn, don't blow off what I've said so quickly - here's why:
We are the last line of communications for our city, county, state,
and nation. This is demonstrated each year when hams are called upon
to provide communications in place of professional systems distroyed
due to Nature displaying her strength and fury. Because of this tre-
mendous responsibility we carry (and this responsibility is one of the
reasons for the existance of our service - see section 97.1 of the CFR)
we should be able to demonstrate the ability to communicate with as little
hardware as possible. We should be able to use our given senses in
place of relying upon exotic equipment. Manually encoded CW, along with
our sense of hearing and our mental powers, provides an unfailable means
to conduct communications in any situation imaginable. Every HF amateur
worldwide has a CW-capable transceiver at his/her fingertips. Now, V/UHF
will not provide reliable communications for the passing of statewide,
national and international traffic during times of *widespread* disaster,
due to the limited propagation at those frequencies and because widespread
power outages will disable repeaters (or their battery banks will even-
tually die). Thus, all amateurs wishing to be awarded the privilege
of operating below 30 MHz should fully meet the code requirements as
set forth by the ITU. CW might not be everyone's mode of choice for
their daily ham activities, but it must remain the common denominator
of all hams worldwide.

Hehe - cute. My undergrad minor was meteorology. And low and behold,
the NWS Central Pacific Forecast office has just moved from the Honolulu
Airport to here on campus, not more than 50 yeads from my office! Geez,
what a set up they have! Now I have the latest surf conditions and
satellite images just a few seconds away. And their office *does* have
windows.

James Reese (jreese@neosoft.com) recently wrote
in <3sf1kq$el8@uuneo.neosoft.com>:

: ..so why do you think changing coordinators in California will make the UHF
: equivalent of the "big KW/beam" guys go away?

At least one can compete with a known activity. Difficult when the
coordination protects a no activity. No one is suggesting there is
a problem with active stations, on any band, KW or not. Most of us have a
problem with the idea of coordinating an occasional use and then
protecting this occasional use for twenty five years or more..

SCRRBA coordinators were able to rejuvanate the 6 meter band with the
help of the user groups. They have coordinated all three hundred 1280 MHz
repeater channels. Now they are faced with the biggest challenge of all.

TASMA and the 220 SMA both faced and surmounted similar difficulties as
the needs of the average ham changed in southern California. It wasn't easy.

: Who said our view did represent that of the average ham? I certainly didn't.
: I understand why SCRRBA does what they do. Whether I agree with their methods
: isn't important. Any coordinator will face the same issues SCRRBA faces.

What is important is many coordinators do listen and understand the needs
of the average ham. The fm needs of the average ham in California are a
bellweather to the rest of the nation. The problems in southern California
will become the issues faced by all coordinators and users of limited
spectrum.

Jack,

I think you're drawing a conclusion without the benefit of ALL the data.
Perhaps the rude neighbor is one of the 11M clods running that illegal linear.

But you're right in stating that consumer electronics manufacturers don't give
a single thought to RF shielding in this age of increasing RF emmissions.

I'm not making any guarantees, but, one solution I've tried is
to choose a large
ferrite toroid and wrap several turns of the cable from the tnc
around the toroid radially.
This should give you a very 'lossy' connection at low freq's
[HF] for signals travelling
on the shield.

What the hey? Couldn't hurt!
Best,
Karyn K0UYH

: transmissions, the motion detector lights light up and my cordless phone
: too. This guy transmits constantly from about 2PM to 2AM every day. I
: called him and asked him if there was any he could check his equipment,
: and he told me to "F*** off".

: I called the FCC, and they explained the problem was that all my
: telephones, speakers, TVs, and radios were faulty, and I need to install
: filters on everthing. (That's a very expensive and painful proposition)
: I asked if they could check his transmission power or signal, and they
: said my situation was normal, and it's up to *me* to resolve it.

: I think the time and money I'd have to spend to replace all audio cables
: in the house and filter every radio, VCR, phone, etc. -- would be better
: spent on a frequency scanner, amp, and transmitter. With not much power,
: I'm sure I could jam his signal. Irrational? Yes. But I might have to do
: it.

Actually, you are the victim of the manufacturers who choose not to use the proper filtering and shielding to protect against the types of fields they KNOW will be common in residential areas.

The FCC has given you what is probably correct information. One of the hardest things for people involved in an interference problem to come to grips with is the fact that you can only fix it where it is broken. If a transmitter is transmitting signals outside its allocated frequency band, one cannot filter the consumer equipment. If, on the other hand, the transmitter is not transmitting signals other than its fundamental frequency, asking the transmitter operator to filter a signal that is not there will not help.

I am just curious; if the time and money for fixing the problem and jamming your neighbor are equal, why would you choose the step that will only result in the problem becoming worse? The ARRL has a number of interference packages available by email, ftp and on our Web page. Perhaps they can be of some help.

: >admit that they publish a hell of alot of stuff that's of interest to just
: >about everyone.

: That's my point. If it is of interest to just about everyone, then
: commercial publishers can and will publish it (if ARRL does not beat
: them to it). ARRL should sell the rights to the Handbook and other
: best sellers to commercial publishers and concentrate on publications like
: QEX that are necessary but not lucrative. The analogy here is to Public
: Broadcasting. Their function is not to maximize ratings; that is what
: the big 3 networks do. PBS is not the 4th network. ARRL should not be
: yet another publisher.

Rick,

There is little difference between our "selling the rights" to the Handbook
and publishing it ourselves. Either way, some of the "profits" from the
sales of our publications are used to fund Membership services. How much
would you like to see YOUR dues go up if the ARRL stopped publishing?

ARRL does not sell publications at the same prices as most publishers. If
you want an idea of what the amateur-radio publications business would be
like without the ARRL, take a look at the prices of technical books in your
local large bookstore. I have seen books like the Handbook for $80.00.
Most of the publishers of "hammy" things have followed suit with our price
structures. I think we all benefit. (I know I do when I buy a non-ARRL
book.)

We are not "yet another publisher." For a demonstration, call a large
publisher and tell them you didn't understand something in one of their
publications. The League will connect you to one of our Lab Engineers or
Technical Editors to see if we can help.

Bill Sohl Budd Lake (billsohl@earth.planet.net) wrote:

: Merge the CW questions with the theory questions and score
: the composite at 75%. That would eliminate the pass/fail
: aspect of CW that no other mode currently has.
: That's the real issue...why should any one mode hacve the
: pass/fail status (again, beyond the requirements of international
: treaty) that CW has as a gateway to most HF operation?

That's a good question, but it stops short. What you should be asking is why the international treaty (the signators thereto) want a Morse requirement. You are assuming it is some arbitrary standard or blatant hazing...in fact others have labeled the FCC's continued testing for Morse as just that---hazing. So you're left with two possible scenarios: 1) International representatives to ITU believe that Morse is an important component of international communications, or 2) there is a major international conspiracy underway who's purpose is to keep all of America's brightest electronic wizards (who of course think Morse is stupid) out of Amateur Radio. Hmmmm.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 864 25th June 1995

Enquiries to the society should be addressed to
the Secretary A.N.A.R.T.S., PO Box 860, Crows Nest,
N.S.W. 2065, accompanied by s.a.s.e., or to VK2JPA at
VK2AAB. if you have any news or information for
inclusion in a subsequent broadcast then please send to the
Broadcast Officer, PO Box 60 Blacktown 2148 or address to
VK2JPA at VK2AAB on 144.850 MHz.

LOGS FOR ANARTS CONTEST

WELL, LOGS HAVE STARTED ARRIVING ALREADY FOR THE CONTEST HELD
EARLIER THIS MONTH. THE FIRST ONE IN CAME FROM HENRY, VK8HA,
AT HUMPTY DOO IN THE NORTHERN TERRITORY (AUSTRALIA). WE HAVE
ALSO RECEIVED ONE FROM BULGARIA AND WERE SLIGHTLY SURPRISED AT
THE SPEED WITH WHICH IT REACHED US. WE HAVE OBSERVED DELAYS IN
DELIVERY FROM COUNTRIES IN THAT AREA OF THE WORLD IN PAST
YEARS SO FEEL VERY GLAD THAT POSTAL SERVICES HAVE IMPROVED TO
THAT EXTENT.

IF YOU ARE AWARE OF POSSIBLE DELAYS IN YOUR COUNTRY, PLEASE
POST EARLY, AS THE DEADLINE IS THE DATE RECEIVED, NOT THE DATE
POSTED. THAT DEADLINE IS THE 1ST OF SEPTEMBER, SO BE SURE TO
POST IN TIME.

HAVE YOU RENEWED YOUR MEMBERSHIP?

IT IS THAT TIME OF THE YEAR AGAIN WHEN FEES ARE DUE. HELP
SUPPORT ONE OF THE OLDEST RTTY GROUPS IN THE WORLD IN AMATEUR
RADIO. OUR PRESENT MEMBERSHIP IS SMALL AND WE NEED YOUR HELP.
JUST SEND TEN DOLLARS TO THE SECRETARY, ANARTS, PO BOX 860
CROWS NEST NSW 2065 AUSTRALIA. INCLUDE YOUR NAME, CALLSIGN,
ADDRESS AND ANY OTHER INFORMATION YOU THINK IS INTERESTING,
SUCH AS OTHER HOBBIES, MEMBERSHIP IN OTHER DIGITAL GROUPS --
THAT SORT OF THING.

WHILE THE SOCIETY IS BASED IN NEW SOUTH WALES, WE HAVE MEMBERS
OVERSEAS AND WOULD LIKE TO HEAR FROM YOU. IF YOU CAN ASSIST IN
ANY WAY, PLEASE LET US KNOW. FOR INSTANCE, AT THIS VERY MOMENT
WE ARE HAVING PROBLEMS IN OBTAINING OVERSEAS-SOURCED DX
BULLETINS, INCLUDING THE ONE THAT WAS OUR OWN FOR SO MANY

YEARS BUT IS NOW ORIGINATED IN THE NORTHERN HEMISPHERE. WE THINK ONE OF THE BBS IN THE CHAIN MUST HAVE GONE DOWN AND THE INFORMATION CANNOT REACH US. LISTENING CONDITIONS ARE BAD AND AS A RESULT, WE CANNOT GET THE INFORMATION OFF AIR EITHER. IF YOU HAVE INTERNET CAPABILITIES AND CAN ASSIST, THERE IS AN ADDRESS AT THE END OF THE BULLETIN THAT YOU CAN USE. (I HAVE TRIED A NUMBER OF TIMES TO ACCESS THE ADDRESSES INCLUDED AT THE END OF THE DXNEWS BUT MY LOCAL SYSTEM CANNOT FIND THEM -- CURIOUS -- ED.)

EVEN IF YOU DO NOT WANT TO JOIN US, WHAT ABOUT DROPPING US A LINE ANYWAY AND LETTING US KNOW WHAT YOU THINK OF THE BROADCAST, SO THAT WE MAY INCORPORATE YOUR THOUGHTS.

CHEERS

ULYSSES BEGINS EXPLORATION OF THE SUN'S NORTHERN POLE

The Ulysses spacecraft has begun to explore the northern pole of the Sun, initiating the second phase of its primary mission to study regions above and below the Sun never before explored by spacecraft.

Ulysses, a joint NASA-European Space Agency mission, climbed to 70 degrees north of the Sun's equator at 4 a.m. EDT today (19th June). The spacecraft will spend the next 110 days gathering data on the complex forces at work over this high-latitude region of the Sun, reaching a maximum northern latitude of 80.2 degrees on July 31.

As the spacecraft begins its pass over the northern polar region of the Sun, scientists are reporting a variety of new discoveries from Ulysses' recently completed pass over the southern pole. These findings are allowing them to begin assembling a new, three-dimensional picture of the Sun. Among their latest results:

* Ulysses has verified global differences in the speed of the wind flowing out from the Sun at different latitudes. Most notably, solar winds at high southern latitudes traveled at roughly double the speed found in the equatorial zone. The solar winds flow at approximately two million miles per hour (800 kilometers per second) at high southern latitudes, while dropping in velocity to about one million miles per hour (400 kilometers) near the equator.

* The loss of material from the Sun over the south pole, caused by the flow of the solar wind, is roughly one million tons per second. This matter consists of hydrogen, helium and a small fraction of metals and heavy atoms. Results of the southern pass also revealed the outward pressure of the solar

wind to be much greater over the pole than it is around the equator. As a consequence, the shape of the heliosphere -- that region of space dominated by solar particles and electromagnetic fields -- may be elongated in the polar direction, extending much farther out into interstellar space than it does near the equator.

* High energy cosmic radiation entering the inner solar system and, eventually, Earth's atmosphere, from the galaxy is controlled at all latitudes by the level of solar activity, which is determined by each phase of the Sun's 11-year sunspot cycle. The findings suggest the Sun's control over how much cosmic radiation enters the solar system is just as effective in the polar regions as it is near the equator.

* Plasma waves -- electrical and magnetic fields that result from unstable distributions in the particles making up the solar wind -- play a role in regulating the behavior of solar wind particles and were expected to be found at nearly identical levels in both hemispheres of the Sun. However, as Ulysses crossed the Sun's equator and entered the northern hemisphere, observations revealed significantly higher levels of several varieties of plasma waves in the northern region of the Sun, compared to their presence in the southern hemi-sphere. The cause of this asymmetry is not yet understood, but plasma wave measurements will continue to be used as a diagnostic tool for studying the local properties of the solar wind along the spacecraft's trajectory.

Coordinated observations are under way using Ulysses and a recently launched NASA spacecraft called Wind, designed to study the solar wind flowing between the Sun and Earth. In addition, these two Sun probes are successfully tracking electrons which stream away from the Sun after the eruption of solar flares in the Sun's outer atmosphere.

These measurements will allow scientists to map for the first time the magnetic field lines along which electrons travel and provide new insights and observations into large-scale magnetic field structures occurring in the solar wind.

INFORMATION COURTESY OF NASA

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(16 JUNE - 22 JUNE)

ISSUED ON 23 JUNE 1995

SUMMARY

Date 16 17 18 19 20 21 22
10cm 71 70 70 71 72 72 73
A 11 5 16 24 17 11 (9)
T 25 20 29 23 21 20 22

SOLAR ACTIVITY WAS VERY LOW THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET ON 17TH JUNE; QUIET TO UNSETTLED 16TH, 18TH, AND 21ST TO 22ND; QUIET TO ACTIVE 19TH AND 20TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH 30 PER CENT ENHANCEMENTS DURING LOCAL NIGHT ON 16TH AND 18TH JUNE. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 21ST AND 22ND.

FORECAST (23 JUNE - 29 JUNE)

SOLAR: VERY LOW

GEOMAGNETIC: 26-29: ACTIVE TO MINOR STORM.

IONOSPHERIC: MUFS NEAR PREDICTED MONTHLY VALUES THEN DEPRESSED ABOUT 10 PER CENT 26-28 JUNE.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

COMMENT FROM IPS FOR MAY

THE MONTHLY-AVERAGED SUNSPOT NUMBER FOR MAY WAS VERY LOW, BEING ONLY MARGINALLY LARGER THAN LAST MONTHS VALUE WHICH WAS THE LOWEST IN THE DECLINE OF THIS CYCLE. THE LOW LEVEL OVER THE LAST TWO MONTHS IS SIMILAR TO THAT EXPECTED NEAR SOLAR MINIMUM WHICH IS THE TIME AT WHICH THE SUNSPOT NUMBER BEGINS TO RISE AT THE START OF THE NEW SOLAR CYCLE.

UNFORTUNATELY, (AT LEAST FOR THOSE WHO LIKE AN ACTIVE SUN) OTHER INDICATORS SUGGEST THAT WE HAVE STILL SOME WAY TO GO BEFORE SOLAR MINIMUM AND THE ONSET OF THE NEW CYCLE.

Silent keys

Silent key - VK2ZBN

It is with deep regret that we report the passing of Sam, VK2ZBN of Sydney on the 8th of February 1995, aged 69.

Sam was an Amateur for 40 years. Serving in the R.A.A.F. at the end of WWII he was discharged and entered the employ of the Defence Standards Laboratory. His forte was photography and his photographs of metallurgical tests were highly acclaimed. He went on to become Supervisor of the photographic laboratory.

In September 1956 he recognised the challenge of Television and joined the ABC; in doing so became one of the pioneers of the National Television Service. Through ability and enthusiasm he was to become the Supervisor in charge of the Sydney O.B. Section. As a Technical Producer he was responsible for all the technical aspects of many outstanding telecasts.

Sam was always a great advocate for Amateur Radio especially among the young.

Vale Sam Brown

de Pat Kavanagh, VK2DMY

Silent key - VK2XG

VK2XG, George Grey, Sydney Australia, passed away 11/6/95. 5.15 pm at Hornsby Hospital.

George became a fully licenced radio ham in 1931 and remained active until April 1995.

He worked the 20 metre band to Europe making many friends.

George, we know, would wish everyone on the airways 73's and has now signed off.

Divisional news

Logging recorder for VK2WI

This morning the State Co-ordinator of WICEN NSW John Howard (VK2AMH) with the Acting president John Buxton (VK2GJB) and

members of the WICEN Management Committee presented to VK2WI a two deck 24 hour 20 track logging recorder.

This machine, formerly owned by the NSW Police Dept was provided by courtesy of the Commissioner of Police. Originally costing over $20,000, it will be used to record all traffic in and out of VK2WI and will be invaluable in an emergency when the station at Dural could be used as a command or monitoring post.

Technically it stands in a six foot rack and contains two complete vertical tape decks using one inch tape on ten inch reels recording on 20 parallel tracks.

It is equipped with twenty separate record amplifiers and multi channel replay amplifiers so that twenty tracks can be recorded simultaneously and any number can be monitored simultaneously.

Tape speed is 15/32 inches per second and after 24 hours recording on one deck the second deck is activated automatically, vox is available to greatly extend the 24 hour recording time in low traffic situations.

Guard tones are recorded and constantly monitored to activate alarms in case of tape dropouts or other faulkts. The machine has dual parallel power supplies.

A second unserviceable machine has been provided for spares.

John Howard VK2AMH WICEN (NSW) State Coordinator

Broadcast roster

Broadcast Roster

An interim broadcast roster will be drawn up and circulated within the next week or so. Broadcast team members who are affected should receive their copy by Wednesday.

A new roster will be drawn up as soon as possible after the election next Saturday which will involve all new councillors.

If anyone listening (reading this) would like to join the Broadcast Team please contact the Parramatta office on 689-2417 or Steve VK2QZ (QTHR).

No special skills are required, nor is an amateur licence, although we are in need of a few more full-call amateurs with good 'news-reading' voices.

Sreve Pullan VK2QZ, Broadcast Roster Co-ordinator

PGP at the AGM

PGP at the AGM

Those attending the Annual General Meeting next Saturday can pick up the authentication and encryption software PGP free of charge from Dave Horsfall VK2KFU. He will have a pile of 1.4Mb floppy disks with him, but he would appreciate a blank disk in return.If anyone has a lap-top computer available then more copies can be made; this will also permit "key signing" to take place. Although the disks are in MS-DOS format, Unix users need not feel left out.

PGP (standing for "Pretty Good Privacy") is useful for authenti-cating one's messages on the packet radio system, and also for encrypting messages (presumably NOT on packet radio). All messages are signed with your private key, and if your public key verifies the signature then you must have written it, so if you make a habit of signing ALL your public messages (as the author does) then you can simply repudiate any forgeries. It is also expected to be used for authenticating BBS users, to cut down on piracy.

-- Dave VK2KFU, resident crypto-freak

WICEN News

WICEN News

The State-wide HF net has been resurrected, with various regions taking turns in running it. It is held every Wednesday at 8.30pm, around 3610 kHz; all regions are encouraged to take part, so if you don't have HF access you can always find someone who does.

WICEN has generously donated a multi-channel logging recorder to the VK2 Division, for use at the Dural broadcast station; it pre-viously saw service in the NSW Police Dept. It is not commonly known that the Dural facility is also a WICEN command post (despite it being disabled during the bushfires last year), and this recorder will allow all transmissions to be logged as evidence.

WICEN is busy today, with three events: the Waratah 100 Horse Enduro run by Andy VK2XRX, the Lake Macquarie Half Marathon run by Steve VK2KBL, and the Elouera Half- and Mini-Marathons run by David Shaw VK2TIP. David is also running the City to Surf race later on in the year, and needs a lot more people for these marathons; he can be contacted at home on (02) 588-5061 or at work

on (02) 588-5100.

The major event next month is the Annual General Meeting (WICEN's, not the WIA's, although theirs is just as important); it is scheduled for Sunday 30th July, at Hornsby RSL Club (the same place as last time) and of course the bar afterwards.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Dural report

Dural Report

Here again is a report on the various activities at the Dural broadcast station VK2WI. As this is the last broadcast before the AGM, it would seem appropriate to summarise events over the past year.

Repairs to the station, following the vandalisation last year at the height of the bush-fire season, have been completed; some intermittent failures are still expected as a result of the various lightning strikes in the area. A battery room, to allow the station to operate during a power failure, is under consideration, as is the construction of a secure lock-up to prevent further thefts of the sort that happened over a year ago; the equipment stolen (including a complete HF station with a tri-bander and rotator) still has not been recovered, but we have located parts of the old packet BBS.

The HF equipment is largely behaving itself, with failures being mostly of the mechanical variety. Coverage has been extended to 10m FM, and some other outlets, formerly performed by relay stations no longer able to join in, will soon be added, thanks to the acquisition of some more equipment.

The 2m SSB transmission will be returning to air permanently, and is currently undergoing tests. We still lack a suitable transceiver for 6m SSB, so if one could be made available, preferably crystal locked and at least 10 watts, we would be most grateful. Please note that the beacons interfere with callbacks on these and the 6m FM and 10m frequencies, and so they must be

turned off until such time as they have been relocated.

An FRG-7700 short-wave receiver has been acquired, to allow us to monitor our own transmissions; it did not come with a memory module, so if anyone has one surplus to requirements we would be pleased to hear from you.

As advised some time ago, our 23cm repeater will be changing frequency to accommodate the new Band Plan. As from Sunday 6th August it will be transmitting on its new frequency of 1273.500 MHz; it will have a 20 MHz positive offset, so its input will be 1293.500 MHz.

Finally, we are pleased to announce that WICEN has donated a multi-channel logging recorder, for use during broadcasts and emergency activations; members may not realise that Dural is also a WICEN command post, and we thank WICEN for their generosity.

-- Dave VK2KFU, Dural Engineer

News briefs

NEWS BRIEFS

Software giant Microsoft is currently trialling an interactive television system in Seattle, Washington. The trial will be followed by similar trials in Texas and Tokyo over the next year, and Telstra is planning a similar venture in Australia early in 1997.

Microsoft Interactive TV is expected to offer video conferencing, messaging and chat sessions, and is claimed to be the next evolutionary step after the Internet. The company is currently negotiating with 13 local content providers, so that when it arrives here, interactive TV will have a unique Australian flavour.

Here's a question for you film buffs: which legendary Hollywood movie star was also a pioneer of radio frequency-hopping techniques during the second World War?

Zenith Data Systems has developed a portable wireless "graphics tablet" that allows users to access and manipulate remote data computer while walking around, say, a factory floor. The Zenith "CruisePad" is expected to find applications in health care, retail, and vehicle and aircraft maintenance.

The system may be used to communicate over a distance of several hundred metres. To ensure that the data sent to and from the user cannot be intercepted by unauthorised users, the CruisePad uses a frequency-hopping technique, its spread-spectrum transmissions ranging over a 2.4 GHz bandwidth.

The encryption method used is said to be so secure that it would take a Cray supercomputer 40 years to decrypt a 200ms transmission from the device.

And who was the screen goddess who pioneered frequency hopping some 50 years ago? It was none other than Hedy Lamarr.

-- Thanks to The Sydney Morning Herald and The Australian.

IPS report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(16 JUNE - 22 JUNE)

ISSUED ON 23 JUNE 1995

SUMMARY
Date 16 17 18 19 20 21 22
10cm 71 70 70 71 72 72 73
A 11 5 16 24 17 11 (9)
T 25 20 29 23 21 20 22

SOLAR ACTIVITY WAS VERY LOW THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET ON 17TH JUNE; QUIET TO UNSETTLED 16TH, 18TH, AND 21ST TO 22ND; QUIET TO ACTIVE 19TH AND 20TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH 30 PER CENT ENHANCEMENTS DURING LOCAL NIGHT ON 16TH AND 18TH JUNE. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 21ST AND 22ND.

FORECAST (23 JUNE - 29 JUNE)

SOLAR: VERY LOW

GEOMAGNETIC: 26-29: ACTIVE TO MINOR STORM.

IONOSPHERIC: MUFS NEAR PREDICTED MONTHLY VALUES THEN DEPRESSED ABOUT 10 PER CENT 26-28 JUNE.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Liverpool

The Liverpool and Districts Amateur Radio Club welcomes everyone to an Auction to be held on Saturday the 8th of July.

The doors will open to buyers and browsers at 11:30 am. Sellers will be able to register their goods for sale commencing at 9:30 am.

It's time to go through the garages and shacks of Sydney, drag out those "valuable" items and cash them in.

Drinks, tea and coffee and a sausage sizzle will be available for lunch and a nice warm fire to warm yourselves against. Talk-in will be available on the Liverpool 2m repeater 6625.

The venue will be the halls of the Glenfield Scout Camp in Cambridge Avenue at Glenfield. Just follow the signs!
See you there.

Brad VK2QQ Publicity Officer

Club news: Blue Mts.

The Blue Mountains Amateur Radio Club invites one and all to our July meeting. It has become a tradition that Blue Mountains Amateur Radio Club puts on an interesting guest speaker every month; indeed, our executive works very hard to ensure that we maintain this tradition of our. However, this month we have failed to find an interesting speaker. Since I was partly responsible for this fiasco, it was almost unanimously agreed at our last executive meeting that I had better fill the gap.

So it is with some reluctance I am recommending this shy little guy from Wentworth Falls who is going to speak on a variety of subjects such as:- repeaters
FM modulation
5/8 versus 1/4 wave antennas for mobile use
radiation resistance
the first digital mode

The meeting will be held at the Blue Mountains Amateur Radio Club usual venue on Friday, 7th July, 1995 at 8.00 pm, Springwood High School, corner Grose Road & Chapman Parade, Faulconbridge - enter from Chapman Parade. The customary refreshments will be served.

As always the meeting is open to anyone, but I would especially like to invite Michael Corbin, who's been a club member for a couple of years, but so far has always been too busy on the first Friday of the month. How about it Michael? Come and see us please.

Alex, VK2ICL
Publicity Officer

You're on the side of a mountain, miles from anywhere. Terrain doesn't allow VHF communications. Everything you bring has to be packed in on your back, placing rather severe size and weight limitations on non-survival items. You have a need to communicate with civilization, maybe to inform of your destination and time-of-arrival. What would you bring?

Me: QRP CW rig, batteries, lightweight dipole, some monofilament fishing line to hang it. Think NVIS.
Why CW? Most QRP rigs are single-banders. SSB might not be making it that day. I don't have the back to carry a laptop and a TNC to run those fancy modulations that are better than CW.

I don't think you have thought this through... If an open PL box is
coordinated on teh same channel, in the same service area, as a closed
PL box, how will the closed box users get to use their box? I can see
coordinating several closed boxes with overlapping areas on teh same
channel, but I really don't think mixed modes will work.

Been there (trying to use the closed 220 box), had it done to us.

>all the huge radio masts on the hill. But it wasn't until I got back down
>the mountain that I tried my CD again and it worked fine!
>Can any of you radio guys explain what happened?

Actually it was the alarm receiver in your car that was swamped by all
the RF - it couldn't hear the milliwatt keychain TX.

When the guys that work there use spare flourescent tubes for
flashlights, you wonder about a CD player that was built to sell
for as little as possible? Even kilobuck commercial HTs roll over
on their backs and stick their feet in the air.... And they have
shielding inside, and your CD doesn't...

You're in a high RF area with equipment that is not designed to handle
it. Look - you've got 95% of the Los Angeles FM broadcast stations,
plus VHF TV channels 2, 4, 5, 7, 9, 11, 13 plus UHF 22, 28, 34, 46, 52
and a couple of others I've forgotten, plus all the commercial 2-way.
If I remember the numbers correctly, it's been 10 years, one TV station
alone - UHF 28 - has over 1mw ERP...

5881. Any ideas on a Motorola Motrac 6m base?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-27 00:00:00 UTC
From: morris@grian.cps.altadena.ca.us
Message-ID: <1995Jun27.073906.18601@grian.cps.altadena.ca.us>
Source record: 243488

I was recently given a Motorola L51LHB base station - this is the 60w intermittent duty Motrac mobile in a table-top case... It's single-freq, with PL, narrowband, ex state DOT service.

Rather than re-invent the wheel, does anybody have a modification procedure? The unit is the 42-50mhz version, and I want to put it on 52.525 mhz. I'd also like to get the pinout of the base microphone terminal strip - it came without a mic, but I figure that I can put a few crimp-lug pigtails on a mobile mic jack and use a mobile mic until I can locate a legitimate base mic.

Also, any 52.525 channel elements sitting in somebody's drawer that they want to get rid of cheap? I'd rather give tehmoney to a fellow ham than a rock-crusher.

Good thing you said that, Jerry - for a minute there, I thought I was being
insulted.

BTW, I suspected from your rantings that you'd resort to an anti-semitic
claim sooner or later. You're more the fool for even suggesting that than
you will ever know, Jerry.

You or the other guy who claimed that Israel was socialist should take a
closer look at any country in Europe for the past 50 years, or at the
USA for the past 25 years if you want to call a spade a spade. They are
all pretty much socialist to some extent.

WB> jbaltz@bonjour.cc.columbia.edu (Jerry B Altzman) wrote:
WB>>....as opposed to the US tax dollars going to support dictatorship regimes
WB>>that extends individual rights only to those of a certain religion (see,
WB>>for example, Egypt or Syria). You'd better make sure to scream loud about

WB>You're right, there's no difference between a dictator who forcibly
WB>suppresses individual rights and a democracy that does the same. Both are
WB>examples of fascist government.

WB>>Israel has full freedom of religion (well, I don't want to go into
WB>>Orthodox vs. everyone else here in r.r.a.p) for Jews, Christians, Muslims,
WB>>Druze, what have you. An Israeli citizen is an Israeli citizen,
WB>>regardless of the religion.

WB>Last I heard, there are many people under Israeli control who aren't
WB>allowed to vote because they're not Jews. Has that changed?

There are plenty of non-Jews who have Israeli citizenship. I know
several Christian and Moslem friends who not only vote but serve in the
Israeli army. Get your facts straight before you bomb and strafe Israel
with your words!

WB>>It is clear to me, Jack, that you haven't the foggiest idea about Israel
WB>>whatsoever. Have you ever been there?

WB>No. What would I see besides people with rights and people without?

Find out first. Then engage mouth.

WB>>Here's a shekel Jack--rent a clue.

WB>Maybe you should send it to someone in Israel who has no property rights.
WB>Thet's probably who earned it in the first place.

Jack - send it to an American Indian who has no property rights first!
Americans demonstrate total hypocrisy after what they did to the Blacks
and Indians for the past few hundred years (and still do to the Indians
today) when they make these kinds of criticisms.

It rained up until set-up time and then cleared. The stars were
out all night, defying the weather report.

We were class 3A, plus a V/UHF station and a Novice station. The
U. of MD club had joined with the Naval Research Lab club as there
was not as much prior planning as there could have been :-)

Class 3A? We had more than 2 xmitters on HF at any give time for abt.
2 minutes of the entire 24 hrs. Oh well, blew THAT one...

Lots of people for setup, lots of people EATING, but not so many
operating :-) Wkd. about 400 Q's myself, 275 on CW. Entire crew
estimates about 800 Q's total, lower than expected because nobody was
awake to run 80 CW at night (they were untangling the satellite antenna
from the 80m dipole).

Thanks to everyone out there who worked us!

P.S. 1800z, Sunday, the skies opened up and the lightning began flash-
flash-flashing everywhere. Try taking down 30' aluminum towers in a
thunderstorm...we waited until 1930z.

Source record: 243513

Rick Kissell (fedpress@omnifest.uwm.edu) wrote:

: When I got on 6M recently (with 100W from an IC-551D to a Diamond vertical),
: experienced the traditional TVI/phone RFI problems. A round of filters
: cured the problem for all the neighbors but one. She still hears me on her
: cable TV audio, and to a lesser degree she and her downstairs neighbor hear
: me on their phones. When she called the cable TV company to investigate,
: they just told her to report me to the FCC!

If anyone is having difficulty with a cable company that is not properly addressing their responsibilities, contact me at ARRL HQ. I will put you in contact with Bob Dickenson, our liaison to the NCTA. Bob will help them understand what their legal responsibilties are.

: Anyway, we've finally got the cable TV company (Warner) to agree to send
: somebody out to check their cable. In case I'm able to observe, can anyone
: out there tell me what sort of inspection the cable TV guys should do?
: (What sort of equipment, meters, etc.)

I also suggest that you obtain the ARRL "EMI/RFI - CATV" package. This is a reprint of an article I wrote for "Communications Technology" (CT). CT is the journal of the Society of Cable Television Engineers. This publication is recognized and respected by the cable companies. It available from ARRL HQ for a 9x12" SASE with three units of postage. Our book, Radio Frequency Interference - How to Find It and Fix It, has a chapter on television and catv interference. I note that you are an ARRL Member, so to save you a bit of time, I will send out the CATV package today. You will have to buy the book, though. :-)

As to the specific problem in your post, interference to audio like this is often caused by the common-mode signal picked up on the shield of the cable. You can cure this with a common-mode choke. Get an FT-240-43 ferrite core (do not substitute unless you understand ferrites enough to know what does and doesn't work as a ferrite common-mode choke) and wrap about 8 turns of the cable wire onto the core, just before it touches the first piece of electronics (tv, VCR, set-top converter). That will probably take care of the problem nicely.

Good luck, 73, Ed

I owned one of the units you are asking about. It is proably best not to buy
one now since the use of 10 meters is very low because of propagation. For
a few hundred dollars more you could get a used HF rig tht will be much better
I had mine for 6 months before I sold it and regret every buying it. I wouldn't
pay more than $135.00 for one and check the finals! Lots of people used a
CB antenna that may have matched or not!

You haven't seen me defend analog voice as a superior weak signal method. That's because it isn't. But that doesn't make OOK Morse a superior weak signal mode either, except by comparison to the worse method. Coherent digital signals can perform much better than either. OOK Morse signals are generally about 6 dB better than SSB under typical conditions, and up to 15 dB better under certain conditions. But coherent digital is typically 12 dB better, and up to 33 dB better under certain conditions.

(Of course there may be tactical situations where analog voice's higher throughput may make it the best choice, but then you're going to have to generate a good enough SNR to make it work. It's a tradeoff, high performance codings, or higher power RF. The higher performance codings are essentially weightless, and generally cheaper than higher power RF too.)

The size and power consumption issues for digital are largely moot today thanks to things like the HP-100, Casio Boss, etc that can serve as the I/O device. And if you want the ultimate in low power small size displays, the Casio Databank wristwatch can be used as your readout system. It consumes less power than an earphone, and has its own battery that will typically last 5 years. And of course it can also serve as your wristwatch. Input can be by a chording keyboard which is small, easily made, and relatively easily mastered. (Steve Roberts had one on Winnebiko's handlebars.)

Even off the shelf, there are things like the Handipacket to serve as the TU that are also small and low powered. However, I wouldn't advocate use of the Handipacket since it uses an incoherent FSK modulation and offers no real performance advantage over OOK Morse

in many situations. Though it does offer some other advantages over manual OOK Morse, IE fewer manhours to master and the ability to operate unattended via its mailbox function. This can allow you to do camp chores while the radio goes about the business of sending and receiving messages. But you can build better, smaller, lower powered, and cheaper TUs than that right into your QRP rig. A TU which can offer the advantages of coherent modulations only requires a few low power CMOS or IIL chips when built directly into the radio and not forced to do conversions to and from an intermediate audio form. (Trying to force digital through a SSB analog voice radio just makes everything much harder and more complicated than if the radio is built to operate digitally from the beginning. Ditto for trying to shove digital through a FM voice radio, it's a bad idea, and lowers performance dramatically compared to a radio designed from the ground up for digital operation.)

Heavy duty DSP isn't required to gain the benefits of coherent modulations, though it can certainly help to reach the ultimate in performance. That, however, can be reserved for the base station, which can also run more power for the reverse path (say up to 0.1 watts/Hz or so), relieving you of the need to do such sophisticated processing in the backpack unit.

I know I'm advocating people build something (oh, the horror) rather than use conditioned wetware with stone age analog radios, but the performance gain is substantial from going to superior encodings, and building can be a valuable learning experience toward becoming current with modern communications technology, one of the things hams are supposed to do. (No doubt some enterprising Japanese will soon have an appliance you can buy, but for now, roll your own and learn.)

This isn't a terrible idea, but we know that some enterprising soul
is going to start selling exam passing kits so that all the applicant
will really show is the ability to follow directions (and no doubt
some other enterprising local soul will assemble the kits for a fee).
To avoid those problems, we need some form of test that the applicant
has to accomplish on site. Let me suggest the Goodwrench Challenge
would be a good model. We take a common commercial rig, install one
bad component, and give the applicant an hour to fix it. If he fixes
it in an hour, he gets a Tech license, if he fixes it in 30 minutes,
a General license, if he fixes it in 15 minutes an advanced license,
and if he fixes it in 5 minutes, an Extra license. (Note, I might
be willing to offer an Extra under this system a job if I get to
choose and install the bad component. <evil grin>)

5912. The Ionosphere is Falling!

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-27 00:00:00 UTC
From: Greg Pool <gbpool@redshift.com>
Message-ID: <3sp8tr$bne@wing.redshift.com>
Source record: 243519

THE IONOSPHERE IS FALLING!

[The following is part of a letter by Henry Rishbeth of the University of Southampton published in the June 1995 issue of Physics Today]

Back in 1989 Ray Roble and Bob Dickinson of the National Center for Atmospheric Research, in Boulder, Colorado, investigated "global cooling" in the upper atmosphere. They predicted a doubling of the CO2 and CH4 concentrations at 60 km height (as expected within the next 50 years) would cool the mesosphere by up to 10 K. In the thermosphere the predicted cooling is greater, about 50 K. The resulting thermal contraction would reduce the air density at 300 km by about 40%, leading to increased orbital lifetimes of satellites.

Using simple physics, I estimated that the cooling would cause a drop of 15-20 km in the height of the ionospheric F2 layer (the layer that has the greatest electron concentration and is the most important for radio communications). Better calculations with the NCAR thermospheric global circulation model gave similar results.

These predictions are theoretical: What of the data? The ionospheric layers have been routinely sounded since 1931, though precise measurement of the height of the F2 peak is difficult. At middle latitudes by day, the peak typically lies at about 250 km at solar minimum and 350 km at solar maximum, though its height may vary by up to 100 km with time of day, latitude, and solar and geomagnetic activity. Given this variability, detecting a progressive decrease of the layer height would be difficult, but it should be possible. In Germany, Jurgen Bremer has detected a drop of 8 km in 33 years, consistent with my theoretical prediction.

5913. Transmitting Uses Up Antennas!

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-27 00:00:00 UTC
From: donrm@sr.hp.com
Message-ID: <3spbbc$m19@canyon.sr.hp.com>
Source record: 243520

Transmitting Uses Up Antennas!

Or so a West coast retailer says.

My son recently passed his tech+ exam and bought a rubber duckie for a borrowed two-meter handheld. He made a few contacts, missed his buddies on 220 and decided to upgrade to a dual-band handy-scratchy.

He drove to the dealer he bought the duckie from and plunked down some $600 of his hard-earned cash for the dual-band handheld. He attempted to return the rubber duckie he had previously purchased since he no longer required it with the dual bander.

The salesdroid asked him if he had transmitted thru it. "Yes", he said. The idiot then proceeded to deduct a 15% fee from his refund.

Because he TRANSMITTED thru it? I guess he should be glad he hadn't bought a rhombic or 16-element log periodic.

Geez, at least he didn't ask for a restocking fee!

I think your latter comments are probably good advice on buying
just about ANY used rig.

I have been running a Uniden HR2510 since about 1989. If you
can accept a few limitations, it is a good radio. You have to realize
that for that kind of money you're not gonna get a real full-featured
rig. BUT - in spite of the limitations, I have some nice DX cards on the
wall to *prove* that you DON'T *need* to shell out an arm and a leg
to work 10 meters.

Yes, right NOW 10 kind of sucks....although I've had some
evening openings from central Indiana into Kansas, Colorado, Minnesota,
etc. I can *hear* other paths, some of which are working into Europe
now and then. So, your mileage may vary, just depending on local conditions
and on where your "local" is. :-)

If you can get a good used 2510 or 2600, and for a decent price
which IMHO ought to be between 100 and 150 bucks, you'll be getting
a decent serviceable 10 meter rig. I am looking forward to the upswing
of the next cycle, because I can tell you for a fact that said Uniden
is QUITE effective on 10 meters when that band is up !!

BTW, while the power output of the Uniden is not a lot, that
has some side benefits that you might not have thought of. I have
found that I can operate my 2510 off of not-a-monstrous 12 volt battery.
That sort of portability has made it useful for some portable ops.
A couple decent gel-cells will run it for multiple hours especially
if ya don't keep the mic button depressed all the time. :-) :-)

I'm kinda hoping for some good short-skip stuff this summer....
still need Illinois and Michigan for the 10-10 WAS....

Duane

Yes, I seem to remember something like this from physics. There are only so many EM waves in an antenna (E=mc^2, don'cha know), which is why the more expensive antennas are made of heavier-guage materials. What you should have done is leave the antenna near a commercial broadcasting antenna for a day or so to rejuvinate it.

>at no specified speed to send and receive morse.

If the code speed were to be lowered then I'd like to see a new
element required: Each examinee would have to demonstrate to the VEs
a homebuilt transmitter for an HF band of their choice, showing that
it works and meets all applicable specs. The VEs could provide the
necessary test equipment.

I'd like to see this even applied to the Tech examinees, where they
would be required to provide a homebuilt VHF or UHF rig.

I believe the extra 5 to 10 minutes necessary per examinee would be time
very well spent.

To those who will balk and say that they aren't going into ham radio
to build things, I ask them to explain why they're being tested on
basic electronics (Ohm's law, reactance formulas, resonance formula).

>often they are updated

The one at http://www.ualr.edu/doc/hamualr/callsign.html is updated daily, thanks to the FCC's on-line copy of the callsign database. To find yourself, just search for your last name - if there's more than one the newest will be listed first.

Another place to look is http://www.lantz.com/htbin/cbs_today which is a summary of the last day's FCC licensing activity, showing upgrades, call changes, and new licenses.

>Does nayone here know how much sooner the
>call signs are put in the database than they are mailed?

As far as I know, it's more or less immediate. The process has gotten much faster since the advent of electronic filing :-)

Hope this helps,

>pc? No Windows Software, not Mac stuff just DOS based.

The word on the street is that Supermorse is the hot setup for computer
based Morse training. The other word on the street is that you'll do
better learning on-the-air than fooling with the computer trainer. Of
course that's rather a Catch-22 since to get on the bands where Morse
is most used, you first have to pass a Morse test. This is unlike any
other operating mode, where learning on the air, hands on, is the norm.

>2) What is the
>best way to Log stuff a Book or Computer?

Depends on your typing skills. If you can type and operate at the
same time without getting confused, the computer is better. If you
can't, sticking to scribbling on paper and retranscribing later is
probably better.

>2a) What is best Ham logging
>software - Easy use is a Big +!

Logmaster gets high marks.

3) what is the best/cheapest radio for
>160m - 23cm (I'm gonna go General soon (BIG JUMP!))

A rotary spark gap, puts you on all of them at once. :-)
Actually, there isn't *one* radio that covers that span.
Normally, you'll have separate radios for HF and for VHF/UHF.
The big 3 manufacturers all make good HF radios, as do TenTec
and a couple of other minor players. On VHF/UHF, especially
all mode, your choices are more limited on the one hand, and
wider on the other. There are more minor players, and some
of their stuff is good, but one of the major players, Kenwood,
has real problems making decent VHF/UHF gear. I don't know
why that is, their HF stuff is good. (If your expectations
of radio performance are low enough, even the Kenwoods will
do. They remain popular, but I suspect that has more to do
with the size of Kenwood's advertising budget and the margin
slack they cut their dealers than with any inherent good
design or performance.)

>3a) what is the
>Cheapest/best Antenna for 160m - 23cm?

Same problem. There isn't *one* antenna that covers that span
well. While it's possible to use a random wire on HF, and a
discone on VHF/UHF, the results are far from "best". For best
results, you'll generally need an antenna cut specifically
for each band you wish to operate. There are compromise multiband
antennas, but jack of all trades is master of none.

>4) What are some good Online
>files/books, etc to read to learn more bout ham radio?

Alas, most of what you'll find online either explains too
little, assumes you know too much, or is based on radio
myth and will lead you astray. For the most part, you still
need to deal with books printed on paper to get the information
you need to know. Aside from the RSGB and ARRL publications,
your best source of printed information will be the library
of a good engineering school.

Start with the classics by Hertz, Faraday, Maxwell, etc, and
plow on through Shannon up to Tobagi and Peebles. That'll get
you grounded in the fundamentals, then you can start to look
at some of the books about practical circuit details.

>(personal thought)
>The whole Cw is old debate is really annoying, cw is there to get QSO's
>outta places where otr modes are impossible, granted i Cannot spell :)

Unfortunately, that's one of the radio myths. Once you understand
modern signaling theory, you'll know why.

>but i think CW is a good req. when the CB radio became un-reg'ed it blew
>it to heck! SO just live with cw, just make it easy for me :)

CB never had a Morse test. It did get out of hand when identification
rules went out the window. Requiring one to use his *true name* does
tend to improve behavior. In the anonymous mob, self-control seems to
disappear, and otherwise perfectly normal individuals are capable of
the most heinous acts. This is the real socializing difference between
amateur radio and CB. Amateurs demand your true name (call sign), CBers
hide behind handles.

If you really believe what you wrote about the utility and fun of manual OOK Morse, why do you think government testing is necessary? Don't you think people are willing to learn things just because they want to use them? Isn't real live hands-on over-the-air use the real test? Are you afraid of bad Morse on the air? Or is it really that you're afraid there'll be no Morse on the air without the forced recruitment of government mandated testing, and that you'll be left alone with no one to beep with?

My opinion is that there are enough nostalgia buffs and rabid Dxers around to keep Morse alive forever as an operating mode without government speed tests. And it's my opinion that bad Morse is a self-limiting non-problem. It's also my opinion that the best way to really *learn* Morse is hands-on over-the-air. So where's the beef? Is Morse really fun and useful enough to stand on its own merits, or does it need a government club to keep it alive?

>Surely you are aware that giving away the right to use HF would be
>catastrophic.

Now I'm confused. First you say Morse testing is essential to maintaining operator competence, then you say we can substitute something else to maintain operator competence. One or the other, but you can't maintain both positions. Either Morse is or isn't a skill essential to operator competence. If it is, then testing is the right thing to do. If it isn't, then the test is mere hazing.

The idea of "earning" status through mere labor (whatever form the labor takes) is a religious belief, not grounds for secular government regulation. Secular government must show the relevance of it's requirements to the task at hand. A strong case can be made for testing knowledge of regulations and theory as essential skills, but I maintain that Morse speed testing has no such purpose today. There's no harm in letting people learn Morse (if they choose) hands-on, on-the-air, just the way they learn every other operating skill they want to use. Bad Code on the air is really a non-problem because it is self-limiting.

Ok, you're saying the Morse speed tests are really attempts at
character testing, just as the ancient Indian ritual of running
the gauntlet, or the Medieval trial by combat, or the Eastern
fakir's bed of nails are supposedly tests of character. If that's
so, then lets just substitute one of those tests instead of the
Morse speed tests. Which will it be? I like trial by combat.
Who wants to be VE?

Oh, really? I don't find it fun, or particularly useful now that there
are better techniques, and you said in a previous message that it *is*
intended to be a cursed roadblock. Which is it? (And who cares about

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

(Lots of "speaking of blah" stuff deleted.)

: As a competent operator, you should be expected to use the best
: available techniques for the communications task at hand. Today,
: that is rarely, if ever, manual OOK Morse unless you *voluntarily*
: restrict yourself to its use as a personal choice.

Unless of course your intent is to actually COMMUNICATE with your fellow hams around the world. As a competent amateur operator, you should be able to do that. It is, after all, one of the purposes of the Amateur service. How many operators currently have the "best available techniques" at hand? When that number surpasses (heck, even approaches) the number of Morse operators around the world, you might have a point. Care to enlighten us with your estimate of "advanced digital mode" capable shacks around the world?

: What's wrong is attempting to foist that
: personal choice on everyone else by use of government coersion.

Get off it, Gary. This isn't some big-brother government infringement on your rights. I'm sure they have bigger fish to fry with their "coersive energies" than hams. Many people (and organizations and governments) believe Morse is important in international amateur communications and emergency services. That's why the requirement is there. You have the right to think otherwise. But frankly, I imagine everyone is getting a bit tired of hearing all this "blame the government, blame the ARRL, FCC, ITU, IARU" etc. Actually, I think everyone should start blaming YOU for the continued Morse requirements. You obviously haven't done enough to encourage the availability of inexpensive, techologically advanced modes of communication so that those of us who believe in the importance of optimum communicative ability with the world can finally rid ourselves of the heavy burden of our obsolete keys and keyers.

: The
: Pavlovian conditioning you underwent to become a wetware modem subtly
: changed electrochemical pathways in the brain. I can't say for *sure* that
: that represents brain damage, but it could,...

What some call "brain damage", others call "learning." I know that in your heart, Gary, you're just saying this in jest, but I just can't get the image out of my mind of you sitting at the dinner table, totally bereft of Pavlovian responses or modified electrochemical pathways in your brain...just sort of playing with your fork. On the

other end of the table, poor brain-damaged Jeff has just finished his desert, made his fork into a nice straight-key and is having fun communicating with his friends on a modified TV.

Condition-response. It's not just a good idea, it's the law!

OK, lets do it. I am sure the IARU will just step aside while a few million Americans take over shortwave and ruin it for the world. Screw the treaties because consumers have rights you know! And why not allowing the call signs to be based on zip codes and the hams first three initials. Screw it. Let's open up the 3-30 MHz for the millions of Americans to start their own little radio station.
Technical test? You have no idea what a technical test. Getting a ham radio license by memorizing a few hundred question has nothing to do with technical ability. Gee, now you have a ham license, the first question out of the mouth is, "What is a dipole and what is meant by a repeater offset?" I have heard these questions from the new techies!

: pass more because them's the rules but I doubt I will change my
: opinion.

: Just to spare you the cheap shots about my experiments with
: HF digital; all were done completely within the rules.

Ok! No one is forceing it down you throat and soon the bands will be filled with millions of no code operators. I am sure that the SW broadcast and most other users of HF will all change to satellite and we will once again 200 Meters and down. I just want a few KHz to talk CW on. Can I have that? I don't care if only a few people use it. If I want to talk to someone I will pickup my cellular phone and call them. If I want to to pass mesages around the world I can easily use the internet or fax a message. Where else can one talk CW on? It is challange to be on 80 meters CW and copy a 5 watt signal from half way around the world. That is what I like. If you want to talk on voice you soon will be able too without CW. New Zealand is pushing for it, so many others will come along. You may want No code for HF right

now, but sorry you can't have it. Just keep getting more no code hams and the laws will change. I promise!

5946. FD station - station interference

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-27 00:00:00 UTC
From: bressler@b4pph10d.bnr.ca
Message-ID: <3spir0$qpm@bcrkh13.bnr.ca>
Source record: 243594

I need help in solving a problem. Our Field Day group has grown from only one station per band to two (CW & SSB). We had considerable interference problems this past field day. Contributing factors:

- all stations in 1000 foot diameter (FD rule)
- all stations running <= 150 Watts (FD rule)
- some stations using non-resonnant antennas
- some stations using Beam antennas

I know all FD sites have the same problem(s). I would like to know how other FD groups have solved or bettered the situation.

Possible solutions are:

- running 50 Watts power
- using resonnant antennas
- using bandpass filters (anbody know of good sources or designs?)
- using a coaxial stub at the transceiver to act as either a bandpass of band-reject (any source of information on this would be helpfull)
- a mix of vertical and horizontal antenna polarization
- any other ideas ?

Hugh, how would eliminating the testing eliminate the ability for those
people to operate on CW?

It's not like they are asking for an HF voice only license.

Hi Paul,
yes, there were many fine "fists" to be heard, although I would guess that
many of them were merely keyboards/contest robots.

I think we worked. I was one of about 4 ops, also running 20 and 80 meter CW at
W3RM, 9A, EPA. We just used keyers. I could not get used to sending the
station call! Kept botching it in all different ways. Re N1NH: worked em.
I thought the highest station exchange was 12?

I agree - in spite of the miserable hot humid weather, it was a lot of fun.
I would do it again next weekend!

If you can possibly find a Heil Remote Base Intertie, it will tie two rigs together very nicely, using COR. I think they've been discontinued, but you might contact Heil Engineering (I think that's te name). Hope you get things going.

BTW -- I have one of the above devices, and I have used it to connect all kinds of interesting bands -- from 10 meters to 2 meters, 10 to 440, 2 to 440, 220 to 2, 220 to 10, etc. Also used once to connect 440 to 20. It's kind of nice to use an HT as a wireless remote mic from the backyard...

This sums up the entire debate, and its solution, exactly. Way to go
Northern California!

I really mean this -- the solution is right here. All we have to do is
implement this, and we can put this thread to bed.

But why are there so many urban areas where 440 mhz repeaters are
working better -- and that's on the East Coast, West Coast, Midwest,
etc.? It's not a nationwide problem, nor is the So Cal situation better
than anyone else's -- it's worse.

Congratulations Tom. I'm glad to see another young person join the ranks.
I can't help with everything but I'll take a shot at a few of them.

1) What is the Best CW trainer for the IBM
> pc? No Windows Software, not Mac stuff just DOS based.

Beats me. But oak.oakland.edu has plenty of them.

2) What is the
> best way to Log stuff a Book or Computer? 2a) What is best Ham logging
> software - Easy use is a Big +!

I log stuff in a spiral notebooks. I can make drawings, marginal
annotations, paste in scraps from magazines, etc. The notebook
can travel very easily and doesn't require batteries. In a pinch
I can even use it to make out shopping lists. I have an "official"
spiral bound logbook published by the ARRL for my permanent HF QSO
record but it's MUCH too limiting. I can't write in more than a brief
note about the QSO.

3) what is the best/cheapest radio for
> 160m - 23cm (I'm gonna go General soon (BIG JUMP!)) 3a) what is the
> Cheapest/best Antenna for 160m - 23cm?

For HF you can't beat a dipole for cost/benefit. If you make it as long
as you can and feed it with ladder line into a good tuner you can make
it work on any HF band. It may not work really well, but it'll work
well enough to get you started. Once you get on the air you'll learn
a *LOT* from the other stations you contact. (Write all that good stuff
down in the spiral notebook. It'll come in handy some day.) There are
some really inexpensive VHF and UHF antennas too.

4) What are some good Online
> files/books, etc to read to learn more bout ham radio?

Don't forget your library. If your local branch doesn't have what
you want then ask at the desk. Many (most) libraries are part of
a larger network of libraries. If your local doesn't have it on the
shelf they can probably get it from a member library in just a couple
days.

> (ps) any personal thoughts, comments, advice, anything helpfull you can
> send me is warmly welcomed

I'll pass on advice that was given me when I passed my first amateur
radio examination. "Keep on working on upgrading while you're still
excited about it. Don't stop until you can't go any further." Well,
I took that advice and kept on going until I got to Extra. I couldn't
go any further.

Another good piece of advice is to get in touch with a local amateur
radio club. Any club worth joining will have people that will do
WHATEVER IT TAKES to make your entry into amateur radio a pleasing
and rewarding endevour. (If no one seems to be interested in helping
then it's not worth joining.)

> Thanks in advance

My pleasure Tom.

> (oh i have like no money so stuff like programs and such that are sold in
> stores, well i cant buy em!) Thanks again!

Common problem. Your local amateur radio club may be able to help you
get started with some loaner gear or some outright donations.

>all the huge radio masts on the hill. But it wasn't until I got back down
>the mountain that I tried my CD again and it worked fine!
>Can any of you radio guys explain what happened?

Yes. The explanation is that your CD player is a cheap piece of crap.

The slightly more detailed explanation: your CD player is receiving RF
energy from the transmitters, and this energy is coupling into circuits
in the CD player and generating noise, noise which overrides the control
circuits and makes the CD player malfunction. Take away the RF, and no
more noise, so it worked again.

Now, why did I comment that the CD player is a cheap piece of crap?
You didn't buy a shortwave receiver, you bought a CD player, right? It's
acting as a shortwave receiver, however, and a rather poor one at that.
The ability to reject unwanted electromagnetic signals is called EMC, for
electromagnetic compatibility, and as you might imagine, cheap mass-produced
consumer electronics, where saving 10 cents per unit may save a manufacturer
millions of dollars a year, tends not to have it.

With luck, the new EMC guidelines going into effect in Europe will help,
though I'm not holding my breath. (I am hoping that it will cost manufacturers
more to engineer, manufacture, ship, and market two versions of products,
one shoddy and one usable, than it will to make all of their products usable.)

5958. AZ callsign plate fee increase

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-27 00:00:00 UTC
From: nielsen@primenet.com
Message-ID: <nielsen.149.011772F4@primenet.com>
Source record: 243606

I was surprised today upon receiving the renewal form for my call sign license plates. The additional fee has increased from $5.00 per year to $25.00! Since there is essentially no additional cost to the state after the plates have been made, this looks like another case of sticking it to us!

ARRL Bulletin 64 ARLB064
From ARRL Headquarters
Newington CT June 27, 1995
To all radio amateurs

SB QST ARL ARLB064
ARLB064 FCC closes field office

The Federal Communications Commission has consolidated the functions and staff of its Baltimore field office of the Compliance and Information Bureau (CIB) with the Laurel field office in Columbia, Maryland.

In a press release, the FCC said that in the past the two offices served different purposes, and as the result of FCC restructuring the two offices performed the same activities. The FCC said that since the offices were only 17 miles apart and served essentially the same geographic area, it was more efficient to consolidate them into a single location.

The new, combined facility is called the ''Columbia Operations Center.'' The staff can be reached at 301-725-3474.

The FCC cited monetary savings in the move, since it owns the Laurel property and was leasing space in the Fallon Federal Building in Baltimore for that office.

How the state gets revenue to run its business seems to have indeed "stuck it to you." That's unfortunate.

Hams in California are still lucky enough to have no annual fee for Amateur call sign plates. A one time fee of $21.00 is charged to get the plates and after that - just your normal vehicle registrations renewal. Your ham license must be valid (not expired). Only one set of plates can be obtained per call sign (no "-1 etc.). If your call changes or your license expires you must suurender the plates and get new ones (there is a fee for new plates). But it is pretty reasonable.

Do other states besides Arizona charge extra fees to renew ham plates.

Ken,
Of the three you listed I would recommend the B&K. I use both a DMM
(Fluke 87) and a Simpson 260A on a nearly daily basis in my job at
Rockwell in Cedar Rapids. I also have a Fluke 8024b for my personal use.
If you can't afford a Fluke, B&K would be a good choice for the money.
Some of our other test equipment at work is B&K and have had very good
luck with them.

The *QST* article was by Ed Farmer, AA6ZM: "A Look at NVIS
Techniques," January 1995, pp 39-42.

I understand that the main reason NVIS info is hard to come by is that
most of it appears/has appeared in military-related publications
rather than mainstream magazines. For example, I'm told that a
considerable body of NVIS info has appeared in *Army Communicator*.

The most important thing is to make sure she is using that double, 100% shielded cable. I forget the rg number of it, but it is two full shields.

I don't think the cable companies even use it. It's sort of expensive.

It could also be her cheap TV and there is nothing that can be done about it if the RF is getting into the TV directly and not through the cable.

No meters that I know of to test for a junk TV.

In a message, you write:

>>IMHO, the time has come for a serious look at ARRL divesting its publishing
business and getting back to being a membership organization.<<

How much do you want your dues to be? $50 a year? $75? The surplus generated from the League's publishing business goes to subsidize the dozens of mighty expnsive services that the the ARRL provides to its members and to non-members as well that generate no revenue. Examples:

-- Washington DC representation
-- Support for the Field Organization
-- DXCC (revenues come nowhere near covering costs)
-- QSL bureaus (ditto)
-- etc.

Being not-for-profit doesn't mean you can't make money. It only means that all of your revenues (after expenses) must be put back into the corporation and may not be distributed (e.g., as dividends) to shareholders, etc.

Hello Tom,

I'm just a couple steps ahead of you and have gone through some of the learning curve recently so it is still fresh. I got my Tech license in February, Tech+ in April and Advanced in May. I'd like to make a strong statement about learning CW that is not related to which training software you use. You didn't ask for this and perhaps you know all these issues, so if that's the case I apologize and let's pretend this is aimed at other readers getting started.

When you hear code do you have a little table in your head and think "dit dah dit, um, um, yep, that's an R"? If so, I have some bad news: You will approach mental meltdown when the CW speed approaches 13wpm, and don't even think about passing at 20wpm.
The secret to properly learning CW is to establish a "reflex" connection between the sound and the writing of the character on paper. Just like the reflexes involved with touch typing or the reflex between reading music and playing a note. Don't develop a mental lookup table, as this will create a very painful obstacle that you have to get past later. If there is any thought between the sound and the recognition and writing, things aren't optimal.
On a good day, down hill with a tailwind you can pass a 13wpm CW test with little or no reflexes established, so you could ignore me and hope to get lucky. But then there's that extra class ticket dangling in front of you :-) And you expressed strong interest in using CW, so even if you never want to go to extra there is the difference in effort to be aware of. Doing table lookups at 10-13wpm is work and will tire out your brain, while copying at this speed via reflex is not much extra work than writing down a shopping list.
Have you heard what seem like unbelievable stories about how some folks can copy code from one ear while listening to somebody with the other and conversing with them? Or copy code while watching TV? This is not magic and it's not superhuman skill, it's simply non-conflicting brain pathways.
Again, I'm being very presumptuous with this, but it seems like folks' avoiding the mental lookup trap are the exception rather than the rule.
Advice #2: Do not practice copying code via typing into a computer if you are not going to be able to type into a computer to actually take your test (or use your station). There are different connections established and if you get "good" with typing you may find it a very rude shock when you realize you can't copy squat at high speed using a pencil.

Advice #3: Establish handwriting conventions for ambiguous or
special characters early (zero, O, one, L, AR with a bar etc). The time
to realize you can't tell your own zero from letter O is not when
you're reading the CW test questions :-)
Advice #4: Set up a mock CW test with somebody that you look
up to. Take the mock test once or twice to get over any nerves that
would be a nuisance during the real thing. It's a drawback to have
your hand cramp up because you're trying to break your pencil during
a test :-)

"Been there, done that, got the tee shirt, got the video."
(But still trying to escape from the trap :-( )

I used custom Unix software so I can't give you a plug about
DOS programs to use for CW practice. However you won't find it hard to
come up with something (see below). A friend of mine is impressed by
something called "Supermorse".
Ditto for the logging. You probably know this already, but the
FCC doesn't require logging anymore. So whatever you do for a log
is for your own reasons. But over time you'll find it is very nice to
use a logger as a reminder of past contacts.
Now, as for your hardware questions, I think the proper
answer is that you should determine what you want to do with your hobby,
then look for the tools that fit. But I'm going to take your questions
as they are anyway.
Did you see that Yaesu FT767 go by on rec.radio.swap for under
$1k? That was the best/cheapest radio for the 160m-23cm range of bands
you want to operate on, in my opinion.
I studied rigs a lot, read the print off the ARRL source books,
etc and spent six weeks trying to find a 767 before giving up the search.
But the 767 seems to be the "all in one" for combined HF and VHF/UHF with
a price that is relatively close to the ground.
The extra modules for covering all the VHF/UHF bands might be
hard to find and/or expensive however. And that rig has got A LOT of
gadgets. It has more controls and connectors than all the TV, stereo
and other entertainment equipment in my house combined. So you'd need
to be unfazed by extreme complexity to go with this one. If you do get
a 767 I don't want to hear about it :-)
You imply your budget may not reach $1k and so there may be no
160m-23cm solution that is affordable. If so set your sights lower and look
for good used equipment that handles a smaller piece of the spectrum.
I'm having a blast with an Icom 735 (HF only) that cost $700.
Others are having fun with rigs that run a fraction of that amount.
Some of the QRPers use rigs that is deliciously cheap, but starting
at low power could be very frustrating.
I think the key thing is to get some exposure to rigs on various
bands and see what it's really like, then work toward a preference and
find a match with some equipment that is within your budget. It's unlikely
that you'll be satisfied in the future with what seems like a universal
solution now.
(Oh, depending on what transceiver you get you may need an antenna

tuner too as minimum equipment)
Finding a best/cheapest antenna for 160m - 23cm is not a
practical exercise. An absolute minimum might consist of a discone and
a longwire. But there are lots of compromises and wrinkles to work through
in this area and I suggest you research it and talk with other amateurs
near you.
To tap into some more sources, send email to "info@arrl.org" with
"HELP" as the msg. There are QST digests in there that you should probably
read. Same thing with "HAM-server@GRAFex.sbay.org". This last source
will send you stuff uuencoded. (ARRL server might too, I just don't know).
A decent library will have at least a few amateur radio books.
If you've got a university or community college close by you should be
able to arrange to borrow books from there. Here in an area that is thick
with amateurs the regular public libraries have very feeble collections.
Hopefully your area will prove better!
Your .sig suggests you might be physically near cs.buffalo.edu
which has some online archives. If you've got contacts going to school
there that may be an avenue.
Join a club and hook up with some "Elmers". A part of the
joy of this hobby for many folks is the chance to help others to grow and
you seem ready! I'll bet your fellow club members will offer to lend
you your own weight in reading matter as well as giving you air time on
their rigs.
I decided to "go for it" over the weekend and volunteer to work
an HF station with an experienced contester during our club's "field day".
I thought that being a relative beginner I wouldn't rate and there would be
hot shots lined up taking numbers to run the stations. The truth was a
pleasant surprise. When I got there for my shift my partner was absent,
having come down with a gout attack. So I had to learn the logging and
operating procedures on the fly and I ran the station by myself for three
hours or so, logging contacts with other stations as fast as I could on 80
and 20 meters. The linear had gone sour during the night so I had to run
50 watts instead of 150 and I made some mistakes that I'm happy to forget,
but it was a a class A, major blast.
I'm sharing this to give you a feel for the potential adventures that
are out there. So as you work on your upgrades try to take some time along
the way to talk (or packet) on a radio and have some good fun.

Best wishes,
Pete

Don't bet on it. The Japanese have been making different product lines for years. There can be considerable difference in those products destined for domestic (Japanese) use, those for Europe/Asia, and those for the U.S.

I can't tell you how they manage to do this economically, but I would guess the new rules won't change the strategy much.

You guys are just to nice. But a radio dealership is in business to make a profit. Therefore, the loaning to equipment, antennas, meters, etc for nothing does not make a profit. It is a shame that the kid doesn't know me or one of the many of hams that have 4 (four) or more 2 meter antennas on the shelf that we'd be happy to loan him. The difference is that
we are not in business, but to the dealer - if the customer got any benefit
out of the product - he has to pay. And 15% on a rubber duckie can't be that
much cash. The boy learned a lesson real cheap.

Regards.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 JUNE AND FORECAST FOR 28 JUNE - 30 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 072/003

GOES satellite data for 26 Jun
Daily Proton Fluence >1 MeV: 1.2E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.2E+07 (normal)
X-ray background: A2.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 Jun 29 Jun 30 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 Jun: 072/003

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 26 Jun
Learmonth 6 2232 1112
Fredericksburg 08 24
Planetary 12 21

Observed Kp for 26 Jun: 4552 2233
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 Jun 15 Unsettled
29 Jun 13 Unsettled
30 Jun 10 Unsettled
COMMENT: IPS Geomagnetic Warning 17 was issued on 21 June and is
current for interval 26-30 June. Due to decreased activity,
unsettled conditions are expected for the remainder of the
geomagnetic warning period.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Jun normal normal fair
29 Jun normal normal fair
30 Jun normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
27 Jun 22 near predicted monthly values

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
28 Jun 20 Near predicted monthly values
29 Jun 20 Near predicted monthly values
30 Jun 20 Near predicted monthly values
COMMENT: IPS HF Communications Warning 20 was issued on 21 June and
is current for interval 26-28 June. MUFs at Townsville were near
predicted monthly values with spread F during local night. MUFs at
Hobart were depressed 15% upto 09UT then near predicted monthly
values with spread F.

Buy a dual band mobile rig (HT if you have to). Get involved with various repeater groups - either through clubs or just meet new friends there.

VHF/UHF is the most popular hamming out there. Many UHF repeaters are listed as closed, but ask around, there are always open ones and some of the closed ones will invite you in too.

Good Luck, 73, ERAN GLAGO KD6KVO

Ne> outperform any human ear/brain.

I'll agree with you on this point. Many a machine outperform the human ear in terms of signal to noise ratio. But, CW is and more than likely will always be the ONLY digital form of communication copiable by EAR. That, in itself, makes the use and knowledge of CW a worthwhile asset.

I was taught in the Boy Scouts many years ago to be prepared. That preparation was explained to mean not only being unafraid of change but knowing what of the older technology and abilities has merit.

One of the meritorious things I see in CW is its simplicity and lack of needing an outboard decoder.

The major point is CW is tradition and easy to learn and comprehend. So don't throw the baby out with the bathwater.

Subject: Re: Proposal to abolish the FCC

WASHINGTON, D.C. 06/01/95 - A Washington, DC-based conservative "think tank" - with which House leader Newt Gingrich is associated - has proposed to abolish the federal government's role of spectrum management, and basically to de-license the ENTIRE radio spectrum. Franchises would be auctioned off to the highest bidders, and the Department of Justice would be charged with confiscating radio equipment that was not operated in compliance
with these new rules.

The Progress and Freedom Foundation <pff@aol.com> in Washington yesterday released its plan to abolish the Federal Communications Commission. Highlights from the "comprehensive plan" include:

* Unless Congress acts to preserve regulations, all FCC rules and regulations will be rescinded in three years.

* Immediate repeal of all FCC licensing authority.

* All current FCC license holders would receive property rights in the spectrum, enforced by the trespass laws.

* Deeds recorded in a central Spectrum Registry File.

* Any spectrum that has more than 1 claimant would be auctioned within 180 days. Government would establish standardized spectrum parcels for auction.

* Government agencies must "disgorge" their unused spectrum within determined timeframe.

* All restrictions on use of spectrum would be eliminated. Those who win title could develop and/or re-sell the spectrum subject to antitrust review and geographic and interference boundaries; however, legislation would not set forth interference rights in detail.

* Department of Justice would confiscate any devices used in violation of communications rules.

* Complaint investigation and answering of general inquiries from the public discontinued.

* Spectrum above 300 GHz is infrared rather than radio.

>>Still looking for software to help study for the technician's license.

Here's the finest program I found when I was searching...

Novice/Technician Class Manager
General Class Manager
Advanced Class Manager
Extra Class Manager

FEATURES:

- Simple, intuitive system for preparing for Ham License
Examinations
- Perfect tool for Volunteer Examiners for creating tests
- Manages entire question pool
- Begin reviewing at any question
- Review questions sequentially or randomly
- Shuffle answers for each question if desired
- Take a test from randomly chosen questions (within the
guidelines of the FCC testing criteria)
- Full set of options for customizing tests, including a Test
Design Screen
- Print complete tests, along with answer sheets and score key
- Save tests to disk for later use
- Study assist screen tells you what areas you need to study after
taking a test
- Pop-up on-screen calculator
- Automatically "remove" a question from the "question card deck"
when answered correctly, if desired
- Manually remove any question from the "deck" at any time
- Reinsert into the "deck" any previously removed question
- Start review all over by putting all "cards" back into the deck
- Show answers always or only after an attempt at the answer has
been made
- Saves option settings, deck, and last question number to disk to
"pick up where you left off"
- Print any part of the question pool

Hi Paul...sounds like you enjoyed operating CW on Field day as much as I
did ! I had a ball. We were 3A Ontario. Perhaps we worked...I operated
40M CW between 7.05 and 7.55 Mhz. Also worked some 6M phone.
What a riot ! Can't wait 'til next FD...in the meantime maybe catch you
on HF CW or 6M. I get into your neck of the woods on 6M all the time.

BTW, the copies of the 6M amp are in the mail...you should see them
soon.
Regards...Hugh VA3TO

** Weekly Posting **

The QRZ Callsign/Email Registry is up and running. Hundreds of hams
are checking in daily to update their e-mail addresses.

With our WWW page, you can input your e-mail address directly into the
QRZ Callsign Database, where it will be published on both CDROM and on
the internet. Using this page, you can add your own email-address and
watch it immediately update the online database.

I encourage everyone to check in and add their e-mail address to the
system. It just takes a second, and you only fill in your callsign
and e-mail address - it's that simple.

The URL is:

http://www.qrz.com/email.html

The QRZ e-mail registry will be available online via WWW 24 hours per
day and will update and maintain the database in all future versions of
the QRZ! Ham Radio CDROM.

Thanks and 73,

-fred AA7BQ

Source record: 243633

Bill Sohl Budd Lake (billsohl@earth.planet.net) wrote:
: gregory brown (gbrown@unlinfo.unl.edu) wrote:

: : That's a good question, but it stops short. What you should be asking
: : is why the international treaty (the signators thereto) want a Morse
: : requirement.

: But there's no international requirement for any particular speed.
: The 5 wpm totally complies with the international treaty. In fact,
: one could do morse at 1 wpm and meet the inyternational treaty.

If the intent of the treaty is to encourage anything more than an
extremely ephemeral ability to copy code...perhaps. But if there is a
reason to require code at all, it only makes sense to encourage people
to actually become at least bottom-line proficient at it, or at least
be able to remember it for more than a day or two. That doesn't happen
at 5 wpm.

: : You are assuming it is some arbitrary standard or
: : blatant hazing...

: The standard in the USA requiring 13wpm for the vast majority of
: HF access is, as you say, now little more than a hazing. I agree.
^^^^^^^^^^
You either mis-read my comment or are intentionally mis-construing it.
Come on Bill. You're not stupid.

: : in fact others have labeled the FCC's continued
: : testing for Morse as just that---hazing.

: Ditto above.

Ditto above.

: : So you're left with two
: : possible scenarios: 1) International representatives to ITU believe
: : that Morse is an important component of international communications,

: Ah, but there's even the crack in the dam at that level if you
: acknowledge that no ITU requirement exists for any particular
: speed of morse.

The treaty stipulates "ability". The best way to achieve that ability
is left to individual governments. If Morse is valuable (which it is
apparently deemed to be by the ITU, etc.), a stepped-incentive
licensing and testing program is a logical and efficient way of
accomplishing that.

: Add to that the international treaty may
: change anyway at the next opportunity.

Not a chance. Thankfully.

5986. Broomes Is, MD Special Event

Just a reminder guys and dolls!

On July 1, WA3EOP and N3TDN will operate WA3EOP from Broomes Island in Calvert County, Maryland. I have been advised by the IS Island program director that this activation will be the First Maryland Freshwater Island to be on the air. Plans are to open near 7.25Mhz around noon EDT (1600 UTC) and remain there for an hour or more and then move to 14.250 MHZ. We will remain there as long as there is demand for this special event station.

If conditions permit, we may try 21.350 and or 28.350 MHZ. We hope to close out back on 7.25 MHZ.

A special QSL will be available for this First Time Ever Maryland Freshwater Island on the air. We hope you will look for us.

Our QSL special address (SASE PLEASE) to:
WA3EOP Broomes Island Event
c/o ARA
P.O. Box 52
Hagerstown MD 21741

We hope to work you and please pass the word on this operation to your friends!

This message has been sent to you for good luck. The original
is in New England. It has been sent around the world nine times. The
luck has now been sent to you. You will receive good luck within four
days of receiving this message - Provided you, in turn send it on.
This is no joke. You will receive good luck in your mailbox.
Send copies to people you think need good luck. Do not keep this
message.
This message must leave your hands in 96 hours.

A United States Air Force Officer received 470,000 Dollars.
Another Man received 40,000 Dollars and lost it because he broke the
chain.
Whereas in the Philippines, Gene Welch lost his wife 51 days after
receiving the message. He failed to circulate the message. However,
before his death, he received 7,555,000 dollars.

Please send twenty copies and see what happen in four days.
The chain comes from Venezuela and has written by Saul De Groda,
A Missionary from South America. Since the copy must tour
the world, you must make twenty copies and send them to friends and
associates - After a few days you will get a surprise. This is true,

even if you are not superstitious.

Do note the following: Constantine Dias received this chain in 1958.
He asked his secretary to make twenty copies and send them out. A few
days later he won a lottery of two million dollars. Carlos Daditt, an
office employee, received the message and forgot that it had to leave
his
hands in 96 hours.He lost his job. Later, after finding that message
again,
He mailed twenty copies. A few days later he got a better job.

Dalan Fairchild received the message and, not believing - Threw the
message away. Nine days later he died. In 1987, The message received by
a young woman in California was very faded and barely readable. She
promised herself that she would retype the message and send it on, But
she set it aside to do it later. She was plagued with various problems,
including expensive car repairs. The letter did not leave her hands
within
96 hours. She finally typed the letter as promised and got a new car.

Good Luck but please remember: 20 copies of this message must leave
your hands in 96 hours... You must not sign on this message...

Tse-Sung Wu <tw1u+@andrew.cmu.edu> wrote:
>Spam somewhere else, dude.

Folks - re-posting to a spam does nothing but lengthen its life. You want to do something about the spammers (and I'm all for that), contact postmaster@wherever.com. The big online services (aol, prodigy) seem to produce the most spams (probably because they have the most users, and many of those are fairly clueless :-). The good side of that is that those big online services also respond very quickly to spamming problems originating inside their walls.

The current one we're dealing with did *not* originate there - it came from a site called "ixc.net", which means nothing to me, but I'm going to send an e-mail to the postmaster@ixc.net, just in case.

Regards, Lee

5991. QRZ Callsign server won't take my call!

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-27 00:00:00 UTC
From: vk3bcy@melbpc.org.au
Message-ID: <3sofk9$ll0@wombat.melbpc.org.au>
Source record: 243684

I went to the URL posted for this call book server
(http://www.qrz.com/email.html and got the entry page to add my callsign
VK3BCY and email address as requested.
The posted entry was rejected with "VK3BCY not found".
Of course it wasn't there so how do you enter it?
The blurb on the Web Page announced proudly that it had callsigns in
countries including Austria etc., but no mention of Australia.
I then tried a search using the callsign of a good friend I have visited in
the U.K. - G0DOD.
Yes, it came back with the right answer - all in the GREEK language!!!
I have saved that page I got with Netscape 1.1 so I can post it up if
anyone is interested.
My advice is that, unless the people running the QRZ callsign server
sharpen up, it is no use for most people to try it - maybe in the good ole
US of A it might work, but that is not the centre of the universe.

>Jim, VE3XJ

You forgot the computer, again.
As was said, we have been through this over and over and over...

You don't need a computer to do CW for you. There are circumstances under which this is significant, and make CW a better choice. NOT a better modulation, a better choice under the circumstances.

|>
|> Burt Fisher South Dennis (Cape Cod), Mass.
|>
|>

{To which I initially replied}

Gee Burt,

You really must get out more. Your fantasies about a group of individuals
bedroom lives really is a true psychological indicator. After all, wasn't it
Freud who said that we fantasize about those things we are unhappy with ?

And your contention can be easily disproved by the number of harmonics there
are in the world.

BTW, Burt, I can't even imagine what your vision is with this mike subsitute
thing. ???? Oh well, I guess as a ham and MORE IMPORTANTLY a husband and
father, I have no need for such wild fantasies myself....

{To which your silence has finally been broken, still waiting for that 'witty' (cough cough) response}

>Anyone used the new hf plus 6 meters Alinco rig yet? If so, what did
>you think of it? 73 de Alan KJ5ZD

So far, so good. Had mine for about 4 days and I like it pretty well.
It's only a little larger than my dual band FM rig, has pretty nice
ergonomics, and the programming isn't too difficult to figure out - most
things make sense and are fairly intuitive. I haven't needed the manual
very much at all.

It has dual filters on cw,ssb, and am - and they seem to work well. The
narrow ssb filter claims to be 1 khz wide, but it feels wider than that.
It does chop off the qrm pretty well.

It gets somewhat warm in full power HF use, but there is a tiny little
fan inside, so hopefully it's moving the heat out where I can feel it,
rather than roasting the innards.
☐
6 meters has been nice - did some simplex and repeater work over the
weekend and got good reports. Copied some ssb but with the mobile whip
they didn't hear me.

Audio reports on 40 mobile were very complimentary. Listening to BBC and
such SWL stations while mobile was also very nice.

The only downsides I can find, so far, is that the noise blanker doesn't
seem to do anything. I haven't rigorously explored this, but you can turn
it on and off in the car and not know which way it's set.

And if you plan to do split bands, split modes you'll get messed up. I
tried to talk to a friend on 10 meters USB while listening on 6 fm using
the split function. It will split across bands fine, but it carries the
MODE of the receive frequency over to the transmit frequency - in this
case making my transmission FM when I intended SSB. I don't have a
strong need to do this anyway, we were just fooling around and my friend
has a tech so he couldn't reply on 10. But if you were using it with a
transverter for satellite ops or something it might be an issue.

I hope to do a pretty thorough review of it when I get the chance, as I
appreciate it when others do the same for rigs I'm considering.

With a battery set and a whip on a pack frame it would be the manpack HF
radio of my dreams.

YMMV

What about the category you let out: people who "believe" in
all modes of operation in amateur radio but also view the

someone who doesn't want to favor one mode over another in
the licensing process?

To all radio amateurs

SB SPCL ARL ARLX027
ARLX027 Inventor W9CSX SK

Marvin Camras, W9CSX, who is credited with the invention of magnetic tape recording, died June 23, 1995, in Evanston, Illinois. He was 79 years old and lived in Glencoe, Illinois.

According to The New York Times, Camras worked and taught at the Illinois Institute of Technology for more than 50 years. As a student in the late 1930s, he built a magnetic wire recorder and later discovered that making recordings on magnetic tape made splicing easier. In 1944 he was awarded a patent on ''method and means of magnetic recording,'' the Times said.

Camras received the National Medal of Technology in 1990. He was awarded more than 500 patents for his work and they were licensed to more than 100 manufacturers.

The Times said that Camras exhibited an early aptitude for building electrical devices, including a flashlight at age four and ''a transmitter'' three years later.

Marvin Camras was first licensed as W9CSX in the late 1930s and held that call sign until his death. Among his survivors are his wife, Isabelle P. Camras, of Glencoe.

: |> before either selling to them or buying from them.
: |>

: Well, there is one thing about Tucker - they are arrogant, they have a good selection, and they charge way too much for their used equipment. However, their attitude is and has always been "If you don't buy it at this price SOMEBODY will". Jim Tucker has very deep pockets (VERY DEEP) and can afford to have merchandise sitting on the shelf, especially when he's paid next to nothing for it.

: Their Ham Radio business is still their secondary business. His primary business is Test Equipment rental and sales. He is VERY expensive, but he has a huge inventory, so poeple come to him when they can't get what they want anywhere else, and he know s it.

: As for the trade-in value, I've heard horror stories, yet I've got several ham radio buddies who have received high trade-ins for their ham gear.

: Bottom line --- there are two large ham stores within 5 miles of my home. I go to Texas Towers whenever I need something because I can't stand dealing with the arrogant staff at Tucker's. HOWEVER, I have and will continue to purchase some things from Tucker because they have a huge inventory, and on connectors, cables and such, he has good prices.

Every time I go into TT, they act like they're too good to wait on me. At least at Tucker's I can get waited on...

If I want to buy used gear, I go to the Sidewalk Sale, or listen to the weekly swap nets on 2m.

Source record: 243451

Hams here in New York started receiving new plates showing a tower and the words "Amateur Radio" in block print on either side of the tower. The call sign is slightly offset to the right to accommodate the new logo. THe new plates are $18.00 plus an additional $5.00/year over and above the renewal fee every other year. Those with existing "Statue of Liberty" amateur call plates can obtain the new style for $13.00. The amateur plates are considered "public service" plates by NYSDOT and are charged according to the same fee schedule as used for EMTs, volunteer firemen, and auxiliary police. The state began taking orders for the new plates early in 1994 but final approval of the dies and design (and a few screw-ups by the boys in Attica!) delayed issuance until early September of last year.

When I lived in PA, the fee was a onetime $3.00 charge and no additional renewal fee. Rumor has it that former Governor Milton J. (as in "Jerrold" as in "Jerrold Electronics") Shapp was a ham at one time. It was during his term of office (1971-1979) that the $3.00 onetime fee was initiated.

To all radio amateurs

SB QST ARL ARLB065
ARLB065 Olympics traffic pact

The US has signed temporary Amateur Radio third-party traffic agreements with the governments of Germany and Greece, for the duration of the Special Olympics, being held July 1 to 9 in New Haven, Connecticut.

The agreements, written according to paragraph 2734 of the International Telecommunication Union Radio Regulations, permit the traffic with the following stipulations:

1. No compensation may be directly or indirectly paid for such messages or communication.

2. Such communication shall be limited to conversations or messages of a technical or personal nature for which, by reason of their unimportance, recourse to the public telecommunication service is not justified.

3. The Amateur Radio stations taking part in the communication shall at all times be controlled by licensed Amateur Radio operators.

Peter Vekinis, KC1QF, who is based in Brussels, was helpful in bringing about these special agreements.

A bit strong, even for me (except when I'm flaming the true believers).
Morse isn't completely worthless, just of less worth than better methods,
and of less worth than its special status in testing would imply. The
worst thing about Morse is that its special status has served to condition
amateurs to a false sense of its utility and performance, which has in
turn limited the rapid acceptance of better methods.

If it isn't hard copy, it isn't copy. And 25+ WPM Morse is definitely no
fun to copy. (Neither is copy at slower speeds due to the tedium factor
and abuse of the ears, but at least you don't get tunnel carpal syndrome.)

>
> TNX ES 73,
>
> Rick WB9GYT
> Milwaukee, WI

Rick A couple of things. One there is no reason not to be able to observe the checks made on the cable system. If it is OK with your neighbor. Don't treaspass. Take a clip board and make notes while the cable guy checks out the system. Ask to see the amount of signal at the tap. and then again at the set. Also take out your trusty old brownie camera. take pictures of all setups. note the number of circuts and conditions of each. If they are having a problem mention the use of quad shielded cable. If you have a handheld tune it to 145.000 mhz to listen for channel 18. The phones are another story your neighbor probably has a portable phone that is on 49 megs even if that phone is not in use it will still help to cause the problem. You mentioned that one was upstairs and one down my bet is they are on the same feed line. and it is old style rg-59. possibly with an open tap someplace and or several connections with bad connectors. Let me know by email what happens and we can go from there.

6020. SK: W9CSX, father of magnetic recording

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-28 00:00:00 UTC
From: shreed@MCS.COM
Message-ID: <3ss8a5$g9l@Venus.mcs.com>
Source record: 243463

Marvin Camras W9CSX, electrical engineer and inventor known for his work on magnetic tape recording technology, became a Silent Key on Fri, 23 Jun 1995. A resident of Glencoe, Illinois, he was 79.

Mr Camras taught at the Illinois Institute of Technology (IIT) for more than 50 years. His talent became evident at age 7, when he built a radio transmitter. As a student in the late 1930s, Mr Camras constructed a magnetic wire recorder for a cousin, an opera singer. Soon after, he discovered that magnetic tape was more easily manipulated. Mr Camras' early work led to a position with the Armour Research Foundation, which later became the IIT Research Institute.

"Marvin Camras is a legend, and we are all grateful for what he did," said Ray Dolby, chairman of Dolby Laboratories, Inc. "The basic principles he explored and designed are use in the tapes and recorder designs in our machines today."

In 1944, Mr Camras was awarded a patent for the "method and means of magnetic recording." During his career, Mr Camras was awarded more than 500 patents for the recording technology that is the basis of all magnetic audio, video and data storage now in use. Though his patents were licensed to more than 100 manufacturers, Mr Camras never become wealthy from his work.

W9CSX was awarded the National Medal of Technology in 1990 by President Bush.

In addition to his engineering work, Marvin Camras was a violin- and viola-maker. His son-in-law, Charles Prickler, first chair violist of the Chicago Symphony Orchestra, plays a Camras instrument.

Mr Camras is survived by his wife, Isabelle Pollak Camras, four sons, a daughter, and six grandchildren.

The New York Times, 28 Jun 95, is acknowledged as source for the above.

>you avoid in-band interference with that many transmitters?), but there were
>many, many others.

Paul,

I visited the N1NH site from about 11:30 PM Saturday nite to about 1:00 AM Sunday morning...they had tents and RVs all over the place. I was advised that they were only required to operate 24 stations simultaneously for a 10 minute period to obtain the 24A. They even had a modulated laser contact with an operator outside of their 1000' area.

Whilst on my way to visit the site I was on 146.52. Talk about a cut-throat operation between WO1N, WB1GOF, N1NH, W1NH and a few others, all vying for contacts. It was comical and with me in there between calls asking for instructions on how to get to N1NH.

I did about 300 or so (+/-) phone QSOs on 40 & 10 at WO1N myself. Made about 50 cw contacts from my home station (WK1V), which included contacts with N1NH and W1NH. (I did not operate N1NH by the way).

I was a little preoccupied this year so only participated for a couple of hours at the WO1N FD site. Last year was the best one I ever attended since 1980, same ops as WO1N but we operated WT1T last year. K1TWF and WN1V did a great job this year (and last year) of running the Billerica Amateur Radio Society setup on top of the Nashoba Valley Ski Resort in Westford, Mass.

<Next year I will wear a mosquito net over my whole body.> 8->

Glad you enjoyed FD, hope everyone did. Not many new hams have ever had to operate in real emergency conditions and I wonder if they even thought about what FD was actually for. Having lived in Florida and Mississippi I have participated in actual emergency ops. Those who think cell phones will replace the help that hams can give have never really seen hams in action nor have they seen what can happen at cell sites when everyone and their significant others are trying to call out at the same time....oh sorry...soapbox mode off. ;-)

Take care & have fun...maybe CU on CW.

6025. CW Wars

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-28 00:00:00 UTC
From: davev@atkc.COM
Message-ID: <9506280441.AA27673@venus.atkc.com>
Source record: 243548

To all the participants in the NO CW wars:

Arguing about whether CW is obsolete, superior to any other
technique, essential to the exam process, etc. is not going to
solve anything.

* The continued use of Morse Code is an emotional issue.
All sides will continue to believe what they believed.

Most of us profess that amateur radio is worth something.
We also note the down slide in behavior on the bands. I honestly
believe that CW verses no CW has nothing to do with the
down slide. The problem is due mainly to a lack of Elmering.
Prospective Hams no longer have people who will spend the time
with them to learn about the licenses, theory, and on the air
behavior to be a good Ham.

To all sides in this war, I ask you stop flaming and use that
time and energy to work one on one with one person to make them a
good Ham. If you are a believer in CW, spend the time to teach
them the fine art of CW, so they can proudly receive *AND* send,
with a good fist and with good procedure. If you believe in 2
meter voice, teach them the proper manners on a repeater, and not
to talk before the courtesy beep, etc. If you are an enthusiast
of the sophisticated digital modes, teach them what you know.

Also, while you are at it, take the time to give them the
enthusiasm to Elmer someone else. Every ham who has received
their license knows something to pass on to someone else, the
material on the license exam at a bare minimum.

>>Who said anything about making them go away? Not I. My suggestion is that
>>we simply coordinate open repeaters on top of the seldom-used ones (most of
>>them) and require both systems to utilize CTCSS. The closed system will not
>>be able to run the open one off the freq because **both** will have been
>>coordinated.

When the 220SMA attempted to do this with a (closed, but newcomers by invitation, no dues) system here in San Diego and an (open) system in Santa Ana (about 100 km away), it took less than 10 minutes for the users of the open system to begin using the closed system. My guess is that's about how long it took them to figure out the PL tone of the closed system.

Even after having been VERY politely informed that it was a closed system, they continued to use it, blowing touchtones at random to break into the control system, and finally including placing long distance telephone calls on its autopatch. The expressed attitude was "it's our frequency! We'll use any machine that shows up on it."

After about two weeks of this, we made another trip up the mountain and moved the closed system back to its co-channel with two other closed systems in other cities, where it's been ever since. By careful adjustment of antenna patterns, adding PL encode to the output of all three repeaters, and other methods of cooperation, the sharing is working rather well.

Closed and open systems cannot share channels where there are any common coverage areas because the public system users don't know how to act on a non-public system. They won't respect the FCC rules allowing closed systems, nor the property rights of the private station's owner.

The primary reason that I continue to do maintenance for several open repeaters in this area is so that the howling masses will have somewhere to howl - and they'll leave the closed and experimental systems alone.

In response to Keith Wyatt vis a vis my post on the value of C.W.
as a communications medium. I will not waste the bandwidth reposting
my original and his reply if you are reading this it is likely you
read those posts also.

My Wyatt does not address any of the technical or operational
challenges presented he replys with the usual quasi religious
rantings.

I am accused of whining for a no code HF license when I specifically
stated that I had passed slow code and would continue because, "them's
the rules". Anyone fluent in the English language who actually read
my original post would understand I did not advocate changing
anything just questioned the awe that C.W. is held in.

Since neither Mr. Wyatt nor Mr.(Perhaps Dr.) Hermann chose to defend
on technical grounds I must conclude the medium is as technically
indefenseable as I had theorized.

For extra credit the interested student can read about 14th century
anatomical studies in Italy and draw parallel to the current code
no code debate. A well reasoned treatse of no more than one page
will count as a quiz.

#1 If more motorists were required to pass a motorcycle test, far fewer motorcyclists would be killed on the highways. (but that fact is meaningless as it relates to ham radio...as is your analogy.

#2 A minority of hams use Morse? A pretty sizeable minority. Morse is second in use worldwide only to voice. In a distant third place (on HF) are all other modes combined, including "modern" digital modes. Now THAT'S a minority. But so what. Morse is required because regulatory agencies around the world (ITU), and probably a majority of hams around the world, believe it is important for us to know Morse. When you convince them otherwise (probably by demonstrating that another mode has achieved the same utility of use and availability worldwide now enjoyed by Morse), then the rules will probably (should probably) be changed.

Larry Roll (Larry.Roll@ssalpha.com) wrote:
: Greetings All:

: Just to add a little food for thought, I've seen a lot of postings
: lately regarding proposed changes to the Amateur licensing testing
: structure. One proposal would have the code/theory tests combined
: so that a passing grade could be achieved based on overall questions
: answered correctly, whether they be from the code or theory portion
: of the test.

: On the face of it, this may seem like a reasonable idea; however, it's
: intent is to effectively eliminate the need for code testing. Nice
: try, but no cigar!

Why no cigar? Besides, I gave up the habit over two years ago.

: The one thing I can't understand is...WHAT'S THE PROBLEM HERE?

: 5-wpm code is grindingly slow...you can literally look up the characters
: in a book as they're being sent. 13-wpm is a good, slow, steady rate
: for casual rag-chewing. 18-wpm is a good, slow, "armchair" copying
: speed for low-volume traffic handling. And 20-wpm is just the
: beginning of what I'd call "higher speed" morse operation. None of these
: speed levels are at all difficult for the average person to attain
: with a little practice. The best way to get this practice is to use
: CW on-the-air.

You are right. If one wishes to master a skill, usually it requires
practise. However, why should one be forced to learn Morse code in order
to have access to the HF amateur frequencies? The only mode that
requires skills testing is the Morse code. Since other modes are not
required to be demonstrated, what is the justification for doing so
singularily for Morse code?

: I'm getting quite bored with this fallacious connection the No-Coders
: keep trying to make, between the Morse Code and "low technology."

I beg your pardon? It is the pro-code testing crowd that crows about the
low tech capabilities of CW operation.

: To the No-Coders, I say...PLEASE...come up with something new if you're
: going to persist in your futile attempt to prove your point. Those of
: us who know better find it way to easy to deflate your arguments, since YOU
: JUST DON'T KNOW WHAT YOUR TALKING ABOUT!

It would seem that short of threatening you with a chunk of 2 by 4, you
refuse to see the merit in no-code arguements. Therefore, it is not

surprising you feel that you are omnipotent and are able to judge who is or is not competent in discussing this topic. To each his own.

: BTW...how many of you high tech, computer-geek No-Coders out there
: can type more than 40-wpm? (I type about 90-wpm!) Anytime you want
: to add typing skill testing to the Amateur licensing structure...go
: ahead...make my day! At least that way, when I'm having a live "keyboard
: to keyboard" chat on packet, I won't have to put up with two- or three-
: word answers to my questions, and have to wait several minutes for them
: to be laboriously pecked out! Talk about your "high-speed" digital
: communications! Sheez!

Again, whether I can type or not, or in like manner whether anyone is able to send and receive in Morse code, is not germaine to ensuring that an individual can operate an amateur station. Therefore, so far as I can determine, the only arguments in favour of Morse code testing seem to be that "I had to do it, so do you" (Oftentimes couched in the "standards" arguement) and the other being it is fun. (I really don't wish to get into the "international goodwill" arguement because that seems to peculiar to the US regulatory regime and I am reluctant to discuss for what is really an intra-US concern and does not apply beyond US borders.)

With respect to the first arguement, standards change all the time. The conditions that we live in as a society have changed and there is no point in trying to avoid accepting the change. Under those circumstances, it would be unnacceptable to demand that individuals must demonstrate skills and abilities in the same manner previously. It just would not be acceptable to the public at large.

On the other hand, if Morse code is so much fun, then testing is not required because everybody would be flocking to it and learning it and using it. However, I suspect that many who advocate for the continuation of Morse code testing believe that it is necessary to do so, otherwise their beloved mode would be relegated to individuals whose have a specialized interest in that mode - in similar fashion to those who are members of SPAM, the Society for the Preservation of Amplitude Modulation.

: 73 de Larry, WR2F

: ... Any idiot can push a button and talk. And most idiots do.

Perhaps this is so. However, it is even a greater tragedy when we insist on continuing to determine the competence of the individual for a skill when it has no bearing on the operation and needs of the individual and its original intent is lost in time and technology.

73 and live better digitally

I run all the digital modes (including CW). RTTY also loses/garbages characters
without much provocation. An unknown language is an unknown language whether
it's being printed on your screen or you are receiving it by ear. You fill
in the blanks as best you can whether its RTTY or CW. I do agree The TOR modes
are more efficient than either RTTY or CW. I also agree RTTY is better than
CW under good condx, under bad it's a tossup.

>AS for being a lid filter anyone who believes that hasn't been on
>parts of 75 or 20 meters.

You apparently have not spent time in the CW subbands. SSB is a zoo.

>In closing I must agree with Gary Coffman that it smacks of hazing.
>"We had to do it so you have to." I passed slow code and I will
>pass more because them's the rules but I doubt I will change my
>opinion.

I don't know if it's hazing so much as out of step with the times. In the days
when CW was all there was it had its place. Now it's a bit out of sync to
have it as a license requirement. Better technical (written) testing in all
modes allowed in amateur radio would probably be better. Also more
concentration on operating technique.

: Yes. The explanation is that your CD player is a cheap piece of crap.

When this is offered as an explanation to your neighbor, expect friendly cooperation to evaporate quickly. In reality, his CD player was designed to have wonderful sound and reliability. Unfortunately, they put the engineering into those areas and not into filtering and shielding. :-) A bit more diplomatic, less insultive of the consumer's choice of products and much more likely to leave the door open for continuing discussion about EMI cures.

Right. Until the next time the store was 30 cents cheaper on a
600 dollar purchase.

Let's be real: the 2 meter antenna being returned is nothing
more than USED equipment. It is out of package and the store
almost certainly will not be able to resell it at even the
original (minus 15%) price.

BTW: some people may not realize it (I know, it's hard to believe),
but some of us would have kept the 2m antenna as a spare. And yes,
it WILL work on the dual-band radio (certainly for the design band
and maybe for 444MHz), contrary to what some "experts" have said to
me in the past.

Let's hear some more Field Day stories now.

In Indiana we pay $2 per year, every year. A bargain in my mind, if
only because we get a new plate every year and the common folk get
only a little sticker with the new expiration date. The fee has
been $2 for as long as I have been getting plates (30 yrs).

From: ham@wam.umd.edu
Message-ID: <3srp59$j20@cville-srv.wam.umd.edu>
Source record: 243561

It was GREAT! I've never been involved in a 6m E-skip opening before (only been on 6 for a couple of months, and with any conviction for about 3 weeks); this one started locally before 0030z (that's when I hit the switch, and beacons were already strong) and held on until a little past 0330.

The link between the mid-atlantic states (DC, MD, VA) and the Midwest (IL, IN, WI, IA, NE, MO, SD) was incredible! My 8 watts were more than enough to get 59/599 reports from more than a few people (probably helped by their antennas, too :-), and the anticipation of the band just shutting down suddenly simply made the experience that much more intense.

Also heard K7LR (?), DN45 in Western Montana, but that path lasted for about 5 minutes and the pileup had already begun when I got there. A couple of other locals did, however, work him.

I snagged 13 new grid squares to bring my total to 21 - it was a good night. See you during the next one! Maybe tonight?

PR>73 de Bill KB8USZ pruth@ocvaxa.cc.oberlin.edu

Bill, I had some RFI problems here when using a 130 foot end-fed wire antenna. Recently I buried 100 feet of co-ax back into the woods to feed a G5RV dipole well away from the houses. All of my RFI has disappeared. Get the antenna away from the houses or reduce power and you will do fine. You don't always need 500W. You should see what can be done with 5 watts! Even with a compromise antenna in an apt complex you can work a lot of DX.

Hi Scott!

Welcome to 6 meters and Es season. You need to work 'em while they're hot, since by 1 Aug they'll quieting down for a while with maybe a breif return near Christmas until next mid-May.

Europe has been worked by quite a few northeastern ops this summer so far. CT1, CT3 , EH8, PA0, SM7, G, GZ, 5T6E, etc. have been reported on my local DX packet cluster. I worked OX3LX on 22 Jun about 0130Z and havbe heard him a fem more times since. Usually around 50.106 to 50.110 cw or ssb. He's in GP36. KB5IUA (EL29 - Texas) reports having worked many Europeans this season as well.

With all the new 6 meter activity worldwide, this should be more and more fun every year until the next sunspot peak, which could be the most fun on 6 ever.

Cheers,

Mike
WA8MSF@aol.com EM79sd - JST-245 w/2x3-500Z + M2 6M2WL @ 120'

P.S. It was probably N7ML (Mike Lamb) that you heard in DN45. I hear him alot lately in Ohio.

>it works and meets all applicable specs. The VEs could provide the
>necessary test equipment.

You're going to require this for the *initial* HF license? That means
you're going to require applicants to be able to build such a rig and have
it work the *first time*? After all, before they get a license, it would be
illegal for them to build and use such a transmitter, so they couldn't
practice or test it ahead of time. That's a pretty darn stiff requirement,
Jeff. Did the first rig you built work within spec the first time you
turned it on?

I gotta point out.....
Saying the CD player is crap because it fails when your are on
Mount Wilson is kinda like saying Tupperware is crap because you
can't use it in the oven. C'mon now....

>

Hi Brian, et al.

Brian,
I think you're pretty narrow-sighted if you think that CW is an attraction (or even an interest)
to any but a fairly small percentage of the newer hams and potential hams. I know that CW was
not my primary interest when I got started, about 23 years ago. I learned Morse because it was
required, and enjoyed a number of CW contacts as a Novice. However when I upgraded to Advanced
and was able to get a sideband rig, that's the part of the band I headed for. Several times
over the years I've had periods of activity on CW, but it's surely not even as high as a
secondary interest now - or in probably the last 5 years or so.

There are so many other areas where amateurs use radio to accomplish different goals that once
the initial hurdle of getting a license is overcome, there are a lot opportunities open for
different applications of radio, most of which don't require (or benefit from) Morse skills.

The horizon is broader than a 100 Hz bandwidth signal...

73, Bob, KD7NM

At one time Icom offered a more efficient speaker for the Ox-AT series radios. The original speaker (and the audio amp, for that matter) were not great in that regard. You might want to try replacing the speaker, in the event that yours is of the original variety.

Hope that helps1 73, Bob

: Hugh, how would eliminating the testing eliminate the ability for those
: people to operate on CW?

: It's not like they are asking for an HF voice only license.

Well, actually, considering the number of folks now who take the code test to upgrade, then immediately throw away their keys...it's a good bet that a considerable majority of them _are_ asking for "HF voice-only licenses." But that's somewhat beside the point. "Fun" or not, the point is that Morse is required because it is deemed an important skill in international communications. The other point is that few people would make the initial effort to learn Morse unless it was required. It's a bit like the alphabet...it's required because it is useful...but few kids would learn it unless it was required.

You can hold a different opinion about the usefulness of Morse in international communications, and argue about that. But the rest of these claims and counter-claims, accusations and counter accusations of motive, and other benefits/counter benefits of Morse are just noise. Until there is some common understanding of what we are really talking about, this discussion will go nowhere.

6057. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-28 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.uJTF8c1w165w@GRAFex.sbay.org>
Source record: 243580
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your

system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE
and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

6059. July 4 Special Event Station

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-28 00:00:00 UTC
From: geoff@nntp.cadence.com
Message-ID: <DAw6Mt.u3@Cadence.COM>
Source record: 243582

Members of the Santa Cruz Amateur Radio Club will demonstrate ham radio at Wilder Ranch State Park on July 4. A special event station, K6BJ, will be operating on 40 meter CW (7040 kHz +/-) between 1700 and 2300 UTC. Local amateurs in Santa Cruz, California, may also be able to reach the station on packet at 145.01 MHz. Vintage radio gear and other artifacts will be displayed for the visiting public. Attendance at the annual July 4 special park programs averages several thousand people.

Santa Cruz may be home to the only state park in the nation with an amateur radio heritage. Melvin Wilder became a ham in the early 1920's. His station, W6CEH, was well known on the central coast on 160 meters. His QSL card carried the moniker "The Downtrodden Farmer".

Melvin Wilder was an innovator. Around 1892, he installed a hydro-electric system and wired the house and barns. A huge barnyard arc lamp deceived the cows by creating an early artificial sunrise. Wilder was one of the first in the State to bottle milk in glass and one of the first to utilize delivery trucks, rather than horse-drawn wagons.

The Santa Cruz County Amateur Radio club, founded in 1916, is on of the oldest in the nation.

Wilder Ranch State Park is located two miles north of Santa Cruz on State Highway 1.

>What's the best (legal) way to shut these guys down nowadays? Anyone had
>any recent experience with this?

If this station is indeed an illegal CB'er running high power, I would call the call the FCC again. They might be more interested now, especially if you check with other neighbors to see if they are also experiencing interference and have them call the FCC and complain.

The following is a QST

Is the FCC on its way out? One group of experts says its time
for the Commission to be replaced by an office in the White House.

Find out how this could affect ham radio on Newsline report number
932 coming your way, right now:

(*****
FCC RIP -- NOT YET

Is the FCC on its way to oblivion? A think tank with ties to
House Speaker Newt Gingrich released a proposal to dismantle the
Federal Communications Commission and replace it with a small
executive branch office. The plan would turn over the nation's

airwaves to broadcasters, cellular companies and other current holders of FCC licenses. Future licenses in all services would be sold to the highest bidder.
How could such a sweeping change impact on Amateur Radio?

Whatever support amateur radio gets from the FCC now would be a thing of the past if the Commission is dismantled. That's one opinion voiced by an opponent of the Progress and Freedom Foundation's plan. The foundation proposes to drastically reduce the Commission's staff which numbers about 2,200. Perhaps most significant to amateur radio all FCC rules and regulations including Part 97 governing the amateur service would be phased out. The foundation's idea is getting thumbs down from Alabama ARRL Section Manager Tom Moore, KL7Q.
The Foundation proposes setting up a new office of Communications. It would oversee privatization of the airwaves. Many federal laws would be repealed, which must of the FCC's regulatory responsibility being transferred to the states. Anti-trust regulators would take over some functions. Moore believes amateur radio would be a loser under the think tank's plan.
Hams aren't the only ones who don't seem to like the idea of dismantling the FCC. The proposal is also drawing criticism from Commission Chairman Reed Hundt.

And the FCC is far from being down and out. Representative Edward Markey of Massachusetts, the senior Democrat on the House telecommunications panel says that Congress is considering legislation that would give the FCC even more power and influence than it has right now.

(*****
BALTIMORE FOB CLOSES

Meanwhile, further cutbacks are taking place at the FCC. This with word that the Commission is closing its Baltimore field office effective June 19. Baltimore is being consolidated with the nearby Laurel, Maryland facility as a part of an ongoing government austerity move.

(*****
FCC HOME PAGE

And the Federal Communications Commission has set up a FCC Homepage as an entry point to the Commission's new on-line resources. The page features selectable buttons to go directly to high interest items such as the Daily Digest, the Commission Agenda, Auctions, and current rule makings.
To access it, simply type http://www.fcc.gov. Once on-line, there also is a button called Getting Information. Clicking on it provides a tour of what information is available and where it can be found on the site. It provides links to available on-line

documents. There also is a link to the FCC telephone directory. A general mailbox for electronic mail to the FCC is also available on the Internet. Its simple. Type fccinfo@fcc.gov.

(*****
ARRL RESPONDS TO RFI PROPOSAL

The ARRL has commented on an FCC proposal to deregulate the equipment and testing requirements for personal computers, peripherals, and individual components as outlined in ET Docket No. 95-19. The proposal made in February would not change the substantive regulations governing unintentional emissions from Class B digital devices, and there is no proposal in this proceeding to increase the amount of permitted RF energy from personal computers, peripherals or their components. Theoretically says the League radio amateurs will not be affected by this proceeding. This, not withstanding the fact that the Commission's certification procedure is specifically intended to ensure that unintentional radiator devices not cause interference to radio services such as broadcasting, aeronautical and maritime communications, and the Amateur Service.
But the League did express concern that the FCC was proposing to give up oversight that in the past has kept interference from Class B computing devices to radio receivers within practicable limits. This is a special consideration now that many radio amateurs have P-Cs as permanent parts of their stations. The League said it was important that the FCC reaffirm its intention to increase enforcement against noncompliant devices.
The League said it is the concern of the amateur community that new testing procedures could allow on the market more devices that either are not tested, do not meet RF emission requirements, or both.
Finally, the ARRL also noted that since Class B PCs can malfunction due to close-by RF fields, that every unit carry a Declaration of Conformity to identify where the owner can go for assistance in getting the device to function properly in the presence of an RF field.

(*****
NEW SAREX LAUNCH DATES SET

NASA mangers have set new launch dates for two Shuttle Amateur Radio Experiment missions scheduled to fly this summer. Space Shuttle Discovery on Mission STS-70 is now targeted for launch on July 13 and Endeavour is set to be launched on Mission STS-69 on July 30.
The new target launch dates for Discovery and Endeavour were established after the launch team finished assessing the impact of a decision to roll Discovery off Launch Pad 39-B.

As previously reported, the rollback was required in order to make repairs to the foam insulation on the external tank caused by woodpeckers eating away the outside foam insulation. Also, there is a SAREX operation scheduled for the STS-71 Mir Rendezvous mission which should be underway as this newscast goes to air.

(*****
NH TOWER BILL SIGNED

Here is a follow up to a story we reported three weeks ago. Word that New Hampshire Governor Stephen Merrill has signed into law a bill protecting amateurs' rights to antennas.
The bill, HB 379, earlier passed both the state's House and Senate unanimously and was signed by the governor on June 5th. It was originally written to include slightly stronger language regarding antennas than that contained in PRB-1. The language was then fine-tuned at the suggestion of members of the legislature who are friendly to Amateur interests.

(*****
3rd PARTY TRAFFIC FOR SPECIAL OLYMPICS

Some international third party traffic will be permitted to and from the upcoming Special Olympic Games. This, as a result of efforts made by Peter Vekinis, KC1QF to the appropriate authorities in Germany, Ireland and Greece. All have agreed to permit 3rd party messages for the duration of the Special Olympics, to be carried by licensed radio amateurs for the benefit of families and friends related to the event. Messages are limited to either voice or data, maximum of 2 minutes in length, between radio clubs in the countries concerned and must only be a personal or technical nature or related to the Special Olympics.
The games will be held in Connecticut from June 26th to July 7th.

(*****
ARIZONA 2 METER HIGHWAYS

A couple of road stories for you. The next time your in your local magazine shop to pick up a copy of the June-95 issue of Arizona Highways magazine. WA2RCB says via packet that there is a very good article in there about ham radio operations in that state, along with a state map keyed to show many 2 meter repeaters.

(*****
70+ BIKE USA

The 70 Plus, Bike Ride Across America that starts on July 27th is looking for hams who would like to provide communications

support and possible participation in the ride! Joe Walker and three other 70 plus seniors are going to ride their bicycles across America, 2900 miles in 8 days and they are also looking for a forth rider. Shirley Landau is doing the coordinating for the event. For information contact her at Ride Across America, POB 17867, Encino, Ca 91416. Or call Shirley at area code 818-774-9083.

(*****
REACT COFFEE

And Hal Grunenwald of Central New York REACT says via America Online that over the Memorial day weekend his group served over 1200 cups of coffee, 8 gallons of orange drink and 150 dozen donuts as a courtesy to travelers inn the area. Hal notes that this is not a bad record for a small REACT team. We at Newsline agree.

(*****
LOST SATELLITE LOGS

VE2VB, of Quebec Canada has reports that he lost a computer file containing logs of some of his recent satellite contacts. Benoit says that he made about 30 contacts on AO-10 and AO-13 in the month of April. He asks anyone who may have worked him during this period to contact him so he can build his log up again and issue QSL cards to those who need them.
Benoit can be reached on packet radio at VE2VB at VE2CLJ or via the Internet at: ve2vb@mtlgw.ampr.org. His postal address may be found in any Callbook from 1987 on.

(*****
HIGH SCHOOL STUDENT PAYLOAD LAUNCHED

A suborbital space payload, the first built and managed by junior and senior high school students, was successfully launched on a NASA sounding rocket on Friday May 12th, from NASA's Wallops Flight Facility, Wallops Island, VA.
The launch culminated a year-long aerospace course that took 79 Florida students in the 1993-94 school year through an academic program that taught them hands-on rocketry, including payload development, data analysis, flight electronics, flight dynamics, data transmission and optics.
The students were from Cocoa, Melbourne and Palm Bay High Schools and Southwest Junior High in Palm Bay, FL. The project is a cooperative venture between NASA, the State of Florida's Technological Research and Development Authority and the University of Central Florida.
The rocket, a ten-foot tall Super Loki-Dart flew to 45 miles altitude to transmit data back to Earth. Its mission is to prove the value of small, inexpensive meteorological rockets as tools in remote optical sensing.

(*****
DX

In DX, Tunisia as 3V8BB is currently active again. This
time activity will be on CW, SSB, RTTY and the satellites.
3V8BB was heard on 14240 kHz SSB around 2230z, 14030 kHz CW
around 2315z and operator Mike, JA2PDQ, was heard on RTTY
around 14083 kHz between 0030 and 0130z. Activity is to last
until the middle of June. QSL via JF2EZA.
Also KF7AY, reports that members of the Page DX Association and
the Central Arizona DX Association will be traveling to Vietnam in
January of 1996. Tentative dates of operation will be January 23rd
through February 2nd of next year. Plans call for an emphasis on
the low bands from the coastal city Nha Trang, with concentrated
top band activity during the 160 meters contest.
The primary mode of operation will be CW, but there will also
be RTTY and SSB activity on 40 through 10 meters, plus the WARC
bands. Permission and logistics permitting, there may be a limited
first time Island On The Air effort from the Island of Hon Tre,
which is part of the Mein Trung group in the South China Sea. No
call sign has been issued as of yet.
As with previous operations, the Vietnamese government will
likely assign fixed frequencies and these will be published well
in advance.

(*****
YHOTY
And finally, a reminder that the nominating period for the 1995
Young Ham of the Year award closes on June 30. That's if you are
one of those who requested a nominating form but have not returned
it along with the necessary information on your nominee, please
consider doing just that right now. This is because the judging
committee will be scattered across the USA and each nominating
package must be duplicated so that each person judging has the
same information.
The Young Ham of the Year award is open to United States
licensed amateur radio operators age 18 or younger who have
made significant contributions to the nation, their community
or the state of the art in Amateur Radio. Nominating forms
are available by sending a self addressed stamped envelope to
the Young Ham of the Year Award, in care of Newsline at 28197
Robin Avenue, Saugus California 91350. Or you can download the
form from the ham radio files area on GEnie or America Online.

6063. bicycle-mobile info

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-29 00:00:00 UTC
From: neil_fullagar@ccgate.apl.COM
Message-ID: <9505298044.AA804456712@ccgate.apl.com>
Source record: 243337

Someone asked for some bike-mobile setup info. Sorry, I don't know who it was. It *think* it was on this list... My finger was just too quick on the delete key.

Short answer about my setup, followed by some previously posted material: I use a Kenwood TH79A with a headset (I do NOT use VOX and thus far have had the PTT clipped to my jersey.) The headset has a single earpiece and doesn't even block outside sounds from that ear. I have an NMO mount bracketed to the right rear of my Blackburn-style (but not brand) rear carrier. I use a Comet B-10 dual band antenna, partly because the small size is convenient and partly because I don't *want* a bunch of gain - the front-end of the HT has a hard enouugh time picking the signals apart in the Bay Area hills as it is. The same antenna travels with me for use (on a mag mount) in rental cars.

What follows: Info on the bikeham mail list, then info on bike mobile demos and discussions at various events, and about Bicycle Mobile Hams of America.

73 de KE6NCX

****
The following is available from cycling.org:

Info regarding the BikeHam Electronic Mailing List
Submitted by: Wayne Day <wday@dfw.net> Jan 1, 1995

The BIKEHAM@CYCLING.ORG mailing list is chartered for the discussion of topics related to amateur radio, also known as "ham radio", and bicycling, such as operating a ham radio station while bicycling or using portable equipment transported by bicycle while touring. Also, information about the Bicycle Mobile Hams of America (BMHA) will be available through this list. Further info about this list may be obtained from Wayne Day, KF5ZC, wday@dfw.net or 76703.376@CompuServe.Com

All administrative actions for the BIKEHAM list (such as routine subscribe/unsubscribe requests) are handled automatically by way of a special e-mail address on the list machine, namely:

majordomo@cycling.org

You ask Majordomo to perform various tasks on your behalf by sending e-mail to the address above containing one or more appropriate commands as listed below. Note that the commands must appear in the BODY of your message since the Subject line is ignored, and that the last command in any request should be the END command (this prevents

Majordomo from attempting to interpret any signature lines you might
have at the end of your message).

Command Result
------- ------

SUBSCRIBE list-name Put your address on `list-name'
UNSUBSCRIBE list-name Take yourself off `list-name'
END Stop processing commands (useful for
preventing Majordomo from interpreting
your signature lines as commands)
HELP Obtain help on using Majordomo
INFO list-name Retrieve the info file for `list-name'
WHICH Ascertain which lists you're on
WHO list-name Ascertain who else is on `list-name'
LISTS Show all available lists

Note: Commands can be typed in either upper or lower case.

****

The Bicycle Mobile Hams of America continues its policy of presenting
informational programs for hams and non-hams alike -- in particular, those
who ride bicycles.

Here's the 1995 slate:

April 28-30, Dayton Hamvention. BMHA presents its sixth anual forum,
where members will demonstrate special equipment for bicycle-mobile
operation. Forum coordinators: Mike Nickolaus NF0N, and Bob Pulhuj,
KE8ZJ. For details see he official Hamvention program book or write to
BMHA at the address below.

May 26-29, GWBR, Paso Robles, CA. At the Great Western Bicycle Rally,
BMHA, with Ken Wahrenbrock, KF6NC, as moderator, will present a
demonstration of equipment and techniques for bicycle-mobile operation.
Tailored to an audience of non-ham cyclists, the program will stress the
advantages of using amateur radio for communication on group rides and in
emergency situations.

June 16-19, GEAR, Amherst, MA. At the Great Eastern Bicycle Rally,
BMHA will present a program similar to the above, again with special
introductory demonstrations for the non-ham cyclist. Program chair John
Allen, AA1EP, has recruited several bike-mobilers for this presentation.

October 20-22, Pacificon, Concord, CA. At the west coast's largest
gathering of hams, BMHA will present a program/demonstration of bicycle-
mobile VHF and HF equipment and techniques. Neil Fullagar, KE6NCX, will
coordinate this presentation. [Neil adds: I *hope* to show bike mobile
HF. Thus far I don't *do* bike mobile HF. But I certainly welcome others
joining me for that part - and other parts - of the program! Email me,
please.]

The Bicycle Mobile Hams of America, founder in 1989, has over 390 members in 43 states and six countries. Annual dues are $10. For more information and a sample copy of the newsletter, send a SASE to BMHA, POB 4009, Boulder, Colorado 80306.

>are people who have the equipment and the savvy to do it all with a dummy
>load and not break any laws the first time, but I think they're few and
>far between.

Fill a quart can full of oil - wire up several high-wattage non-
inductive resistors. There's your dummy load.

I've already posted an *easy-to-build* watt meter over on .homebrew.

An RF probe for your multimeter takes 2 minutes to make.

The ARRL Handbook has an entire chapter devoted to building your own
test gear, Rich. Part of the fun of homebrewing is also using test
equipment that you've built.

This type of hands-on experience will make the technical questions
on the exam come alive.

6067. Needed: HomeBrew Radio and Antenna Info + A Thank you Letter

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-29 00:00:00 UTC
From: av440@freenet.Buffalo.EDU
Message-ID: <199506292327.TAA03141@freenet.buffalo.edu>
Source record: 243341

Hello Again!
WOW! First outta the chute ide love to thank the NUMEROUS resopnces to my first message on this Mailing list! I could not beleive the overwhelming responce. I Posted that plea on one of the USENET groups Worldwide and A Local one, Recevied no responce what so ever. I put it on the maling list and in one day received 20mails! Then i went on a kinda Vacation of 2 days and came back to find the original 20 plus another 30! within 3 days of posting, some only miniutes after posting the message. So to all of you who Replied Thank you. To those who have not sent something yet and are going to, I cannot wait to hear your Suggestions and advice...

Now to my Next Problem :) Sorry but im a "B.O.B." Of problem and questions. However this is gonna be short adnd i hope clear, in my 1st letter i wanted to get some info on a range of radio from 160m to 23cm this was perceived as looking for a radio that covered 160m to 23cm. I was aware that there was as of yet no radio that covered the 160 to 23cm spectrum, what i wanted was like a 16-10m a 6m a 2m radio, like info on the best preformance/cost radios for single or mutliband radios.. well i got some prices and well the not so shocking conclusion came up, im to darn poor to buy one of these 200 - 5000$ rigs! heck i went so drastic as to say i might just need to build my own! Thats what im gonna do! im gonna build my own antenna, radio and whatever, now Im just asking for a push in the right direction, I have some old CB parts, now i know CB is not in the ham radio spectrum but i have a microphone witch is used on ham rigs so i can go SSB along with CW, all i want is basically (if you know of them)
1) magizines or books that have Step by step instuctions and of course parts lists

2) Mail order companys that sell parts..
3) anything elce you can give me in advice or online pointers to makeing my own equipment

4) please, please dont say check the rec.radio.amature.homebrew group... i did that and guess what? No responce, this was about a week ago and i wanted to be on the air oh lets say march 15th 1995 (look me up in the FCC callbook, 5/15/95 was the day my Call was issued :))

Thanks for the Help and Advice in advance!
tks & 73 de KB2URI!
Tom.

p.s. why the heck dose the ARRL want $30 for there handbook? hmm? So much for getting that book eh'? Maybe i could call some used bookstores and some ham stores? Advice on books, Radios, Life, the World whatever is

also wanted! I need all the help i can get! Thanks, Tom...

6072. Need Info aboutYagi vs Log Periodic

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-29 00:00:00 UTC
From: ke4hw@aol.com
Message-ID: <3sv2et$96c@newsbf02.news.aol.com>
Source record: 243346

Does anyone have a factual opinion concerning the pros and cons when comparing an HF yagi antena versus a log periodic.
My old yagi has about had it, and I'm seriously thinking about a replacement. An ad in the CQ magazine caught my eye re a Cushcraft log periodic which would fit in my limited turning radius. I saw also some advertising for KLM log periodic antenas, but am not sure whether they would fit in my limited area. I presently use a KLM34A, which has been a very good antena until recently, but now needs an overhaul.
Leaving financial considerations aside, what type antena would be operationally more effective. I notice that our military services use very large log periodic beams.

gregory brown (gbrown@unlinfo.unl.edu) wrote:

: : It's not like they are asking for an HF voice only license.

: Well, actually, considering the number of folks now who take the code
: test to upgrade, then immediately throw away their keys...it's a good
: bet that a considerable majority of them _are_ asking for "HF
: voice-only licenses." But that's somewhat beside the point. "Fun" or
: not, the point is that Morse is required because it is deemed an
: important skill in international communications. The other point is
^^^^^^^^^
: that few people would make the initial effort to learn Morse unless it
: was required.

Just because the ITU treaty still includes a requirement that ham
have the ability to use CW does not logically lead to any
conclusion that the ITU implies it is still an important
skill today. The ITU requirement can and probably will change, it is
more just a matter of when.

: It's a bit like the alphabet...it's required because it
: is useful...but few kids would learn it unless it was required.

Poor analogy as without the alphabet, the entire ability to read and progress
educationally is lost. That leads to extremely poor employment
ability. The CW requirement shouldn't be just a means to force others
to learn CW just to hold on to and/or foster continued use of the
CW mode. There is ONLY one possible reason to retain CW and
that is if a credible case can be made that all hams MUST know CW
or there will be a marked decline in emergency preparedness. I have
yet to see any such justification. The occasional reference to a single
CW contact during an emergency does not justify all hams knowing CW
anymore than the prospect of saving someone's life using CPR
mandates that all employees of any company must know CPR.

: You can hold a different opinion about the usefulness of Morse in
: international communications, and argue about that. But the rest of
: these claims and counter-claims, accusations and counter accusations
: of motive, and other benefits/counter benefits of Morse are just
: noise. Until there is some common understanding of what we are really
: talking about, this discussion will go nowhere.

I agree completely. See my comments above.

I guess I'm confused by what you say. First you say profits are used
to defray dues, and then you say profits are very low because the
books are virtually sold at cost. Which is it? If the Handbook
sold for $80 (assuming no drop in number sold, for the moment) then
maybe we wouldn't have to pay any dues at all! Please clarify: is
the League subsidizing the publications or vice versa?

And we all know about the colleges where the football
program became an end in itself and failed to significantly
fund other sports. Example: Univ. of San Francisco.

Again, if the Handbook is such a cash cow, it should be worth
a lot of money to a commercial publisher.

> - some stations using Beam antennas

Our FD station (Lynchburg Amateur Radio Club, K4HEX) setup had similar problems. We had a CW station and an SSB station, plus the "free" novice/tech station and a 6m/2m VHF setup. The CW station fed into a big (full-size for 80m) delta-loop, the phone station used a dipole (again, roughly full-size for 80m), the N/T station could use either a delta-loop or Hustler 5-band vertical, and the 6m/2m setup used a 6m beam, 2m beam, and 2m vertical.

We had trouble with interference as well, but here's some ways we minimized it:

- Run the wire antennas in different directions. I don't know if that was intentional or not, but I think it helped.

- Ground all the stations the best way you can. The phone station was blowing the hell out of the VHF rig until we grounded it.

- We had tuners on all three HF stations, not relying on internal tuners (which all three HF rigs had) except for the N/T's vertical.

- Keep the stations off the same band simultaneously, and if you can do it, keep them off harmonically-related bands simultaneously (i.e., 40m and 20m). Yeah, I know, they're *all* harmonically related more or less, but at least keep them both off the same band. We had all three of ours on 40m simultaneously at one point, and the CW station was the only one that got through.

You realy got it wrong, KE6PTT is NOT the callsign in question, it is my
callsign (the orginal poster of this thread). I found the callsign in
question in the FCC data base, but many people think that the person is using
someone else callsign.

>> of the one in question.

Since the calls are issued in sequence I would have thought that it
should still be in the database (my old General call from 1987 is,
even though I upgraded a few weeks after getting it) - unless it's
a "rude" one that they skipped over, or perhaps if you turn in your
call and ask for another one they remove the old one, or someone
dies...

>> Also from this persons operating practices and question it looks like
>> he has not even studied for the test.

Plenty of people pass the tests without studying for them, and there
are not many questions on the test about operating practises anyway.
Just because someone sounds like a lid doesn't mean that he or she
doesn't have a valid license (regardless of its class).

>>Transmitting Uses Up Antennas!

Unless it's a Mosley!

GHY> E = MC^2 + a bunch of higher order terms.
GHY> Even though these higher order terms are very very small (compared to
GHY> MC^2), it is THESE terms which cause the problems with tranmission
GHY> through an antenna element and the subsequent and continued
GHY> degradation in performance throughout the life of the antenna.

K = (gamma)mc^2 - mc^2; gamma being the reciptocal of the square
root of 1 minus the ratio of the object's
velocity vs the speed of light.

Since this applies to objects with *mass* in motion and we know EM
waves propagate at c, then they must have no mass and this doesn't apply
to the "burning" up of antennae. Then again......

>Come over to California and pay our fees, Geez, talk about fees!
>73, keith

Our California "registration fees" are outragous - but they are calculated differently. There is no extra annual charge for having ham plates. Were we get stuck is with the vehicle license fee or VLF. I drive a 92 Escort that costs about $40/yr for registration. But the VLF brings my annual bill for tags up to about $180. The VLF is a property taxes on our cars - since it is based on the value of the car it deductable on your income taxes as "other taxes paid" even though its called a fee.

I know this doesn't make you feel any better but many people don't realize that a majority of their annual registration cost in California is actually a "tax".

Jeff Stillinger (js@ibbs.anaheim.ca.us) recently wrote
in <12@ibbs.anaheim.ca.us>:

: For example, dose anyone know why the California 440 repeater band is closed
: to the public by most owners? Cross ref a repeater list sometime. You will
: discover that most of the 440 repeaters are being used as control repeaters
: for 220 Mhz and down. Now look at the FCC regs regarding control of
: repeaters. You will notice that those regs are complied with. Would you
: open your control channal up to the public. I think not.

: My whole point here is simple. For people that have had ham licenses for 5
: years or less, shut up and learn. For the older hams, shut up and teach.

Why do you condone the wasteful use of repeater channels for the sole
purpose of controling a 2 meter repeater? All that is required is a
single receiver above 222.000 MHz. The only control function required is a
way to shut off the repeater transmitter .. nothing more.

222 and above repeaters may use their own receiver as a control
frequency. Today most control is really done over wireline circuits.

Sorry I will not shut up! Please encourage new and old to always ask
questions. The 440 band is open to all users while many repeaters are only
open to their members. This is a distinction most new amateurs can grasp.

Join and participate in the sponsoring club. Not all that difficult is it?

6098. Shoddy work by RF Concepts

Date: 1995-06-29 00:00:00 UTC
From: dave@boi.hp.com
Message-ID: <DAx6o3.H8o@boi.hp.com>
Source record: 243372

This is a note on customer dissatisfaction re: the service department at RF Concepts (a subsidiary of Kantronics).

My dad's RF Concepts 2-217 2m amplifier, when new, appeared to meet its power output specification, and given the signal he was feeding it put out ~100W. In time, though, the output drive degraded to ~30W. Thinking that the RF Concepts service department would be of the most competent help, he looked to them for service. Here's what he experienced:

1) He tried for about a month of phone calling to talk with RF Concepts -- the phone was always busy. Either they are:

a) swamped with customer calls (to this extent, not likely),
b) have employees using the line for personal calls nearing 100% of the time (maybe), or
c) they take the phone off the hook so they can't be bothered by customers (this one's my guess).

Dad finally had to write them to get return authorization.

2) Upon receiving the repaired unit (and $142 later), several things were disappointing:

a) Given the same input that originally yielded 100W output, the amplifier now puts out only 60W.

b) They seeming hire apes as technicians -- the top cover of the amplifier is dented and scratched and the chassis corners are deformed where the tech used pry tools to disassemble the enclosure. It looks like he didn't find all the screws and decided to force his way in.

c) One bolt was missing, and the mating nut was rattling around on the inside of the amplifier when Dad got it back.

d) Dad's really good about keeping the original packaging material for all products he buys. The amplifier was no exception, and when it came time to send it back, it went to RF Concepts packaged in the original container, complete with form-fitting styrofoam pieces. When RF Concepts returned the unit, it was unsecured in a big, dumpy box stuffed with styrofoam peanuts. This is obnoxiously sloppy work, and particularly annoying to one with Dad's exacting habits.

Now Dad's wondering if this is repair nightmare is just an anomaly and if he should ever send the unit back to them for further work . . .

What are other folk's experiences with RF Concepts?

Dave

: gregory brown (gbrown@unlinfo.unl.edu) wrote:

: : "Obsolete. a) no longer in use. b) of a kind or style no longer
: : current."

: : What you mean is "Morse is not current state-of-the-art technology."
: : So what? Neither is SSB, ATV, SSTV, RTTY, AMSAT, FM, internal
: : combustion engines, sail boats, lawn chairs, or sex.

: Yes, but in many cases these modes are economically desirable. This
: will change with time, as new equipment becomes cheaper.

I think that was my point. The current, nearly universal access to CW
(manual Morse) technology is one of its great "superiorities". The
time WILL come when newer technologies/modes are cheap, available and
in widespread use, but that time is not _now_.

: : : Mathematically, CW is dead.

: : Huh? I think we'll all have to think about that one for a while.

: CW is no better then any other digital mode, mathematically. That's
: all it means.

Oh. I get it...I guess. I guess that means I'm "mathematically dead",
too. Fortunately, I don't need to justify my value mathematically
(nor does Morse, all the discussions here not withstanding.)

: I would rather talk to those people that are using other modes.

No problem!

: If
: your aim is communicating, why not use the land lines already in place.
: I can make up a 900 number that would act like HF CW or SSB voice. You
: could go up or down in freq by using the keypad. We could even simulate it
: with some changes in IRC.

Well, let's not get silly. We are all familiar with the basic
purposes of the Amateur Radio Service--no need to repeat them. But
the ability to communicate (emergency communications, international
goodwill, etc.) is as fundamental in these purposes as advancing the
(technical) art.

: My aim is to design, build and experiment, so I
: can advance my own knowledge.

Excellent!

Few of us are in a position to actively fulfill every one of the stated purposes of Amateur Radio. Can I design digital circuits and contribute to cutting-edge state-of-the-art advances in technology? Not on your life. But even though I don't have your technical abilities and interests, I do hold an Extra Class license and I DO actually UNDERSTAND the theory I was tested on. A basic understanding, at least, of electronic theory is important. That's why we're tested on it.

The ITU (and signers of the treaty re: Amateur Radio) view Morse ability as an important (essential) skill in the area of international communications (HF). That's why it is required. You may choose not to USE it (as I have "chosen" not to design digital circuits), but you must still demonstrate a basic understanding of it on the exam.

Why speed tests??? It's all part of the incentive licensing structure philosophy. If you demonstrate increased skills and knowledge, you receive increased privileges. 5WPM=Ohms Law. 13WPM=rectifier basics 20WPM=practical op amp circuits. Well, you get the idea.

"Encouragement and improvement of the Amateur Radio Service through rules which provide for advancing skills in both the communication and technical phases of the art."

"Self-training, intercommunication and technical investigation..."

: : operator). But I have a real problem with a guy who consistantly
: : miss-spells "Amatuer" (sic).

: Excuse me, but beign an engineer the spelling part of my brain was
: damaged somewhere in E&M class, and I haven't upgraded my news reader to
: work with ispell yet.

Must have been an exposure to some stray Morse! Probably from one of your fellow students toying with ham radio. Thank goodness your technical skills weren't effected!

> : BN> there's a kid in the area that's been coming to the exams for a few
> : BN> months now -- has trouble memorizing things that just have to be
> : BN> memorized like term of license, grace period, band designations and so

Some things you can get away with using rules of thumb. For instance, the Novice segments for HF are near the center, about 50KHz wide, etc. For things like band allocations, using any trick to get past the test is an O.K. thing in my book. After all, most people will just look this stuff up when then need to know it. With that in mind, the tricky questions have a limited set of answers from the question pool. Perhaps someone can look at the areas where he is having problems and devise some mnemonic or memomorization aid. The entry licenses are intended to get you on the air, after all, without doing any major damage. Once you're on the air, then he can hone his understanding of the details.

Great. I liked it so much I bought another one. I might even
replace my FT-211RH with one before the model is discontinued.

For anyone interested, I called Yaesu and they gave me the cloning
pinout. It is a 2 wire cable which connects the ground and PTT
lines (pins 3 and 5, page 44 of the manual) of each radio together.
I tried it and it works just fine. Yaesu recommends using the
proper RJ45 plug to avoid any possible damage to the radio's
connector.

: license then. You can design and build almost anything you want that
: soea not transmit RF without a license! You can transmit into a dummy
: load if you don't wish to communicate via RF (your stated goal)

Kind of hard to test equipment without a channel. So some
communication is required, but it is not why I am a ham.

: NILARIOUS! You still didn't answer the QUESTION Gary! I can see why you
: don't operate a radio now. ZERO ability to communicate.....
: and you say it is due to your desire to experiment? I say that is an
: excuse for your inability to communicate effectively in wetware
: regardless of the medium.

My name is not Gary. You commented my message with my intials,
and you didn't notice there was no G? Your personal attacks are also
taking this thread into a non-productive dead end.

: SCM>: SCM>In the mean time, for talk, the internet is a much better
: SCM>: SCM>way to go,

: SCM>: ROTFLL! I am surprised to hear you say THAT! Maybe you have never tried
: SCM>: ragchewing with someone half way around the world on SSB or CW!

: SCM> No, I have never tried it.

: Again, I am chuckling right out loud because you have spent DAYS on here
: talking on and on and giving your opinions about something that you
: have never even done ONE time! Hilarious!

I'm sure there are many things you have similiar opinions on from
the same vantage point.

: I've watched other do it, and I find
: SCM>that it looks like someone elses hobby, not mine. Also, if you like the
: SCM>challenge included in those mode, I'm sure we can make an internet app
: SCM>work the same way.

: Kind of like designing a mechanical horse!

The only reason this wasn't done was due to expense. Getting on the
Internet is pretty cheap compared to the types of expenditures most hams
lay out for HF.

: SCM> Actually, I got into this thread to respond to claims that CW
: SCM>is a superior mode to all others.

: Well, for certain things, it is. But how would you know that, since you
: have never tried ANY of them? No flame intended, just wondering aloud!

Because OOK modulation is equal to the non-coherent BFSK in
preformance. Since NCBFSK is the one of the worst keying methods, OOK, is
surpassed in performance in the same manner.

The idea of operating in a high class like that is to be the only one in it and thus assure yourself of winning your category. The 24 doesn't mean they had that many transmitters on all the time, just that there were that many on at some point in the contest. Usually what they do is have everyone key up their HT at once for a few seconds! Probably they only had a few stations operating continuously, like all the rest of us. Look at the scores in QST, they're not much higher (and in many cases are LOWER) for teams operating these huge numbers of transmitters than what most 2A and 3A groups have.

Why not cut this guy some slack? At least he's trying to learn and wants
to learn. It's the schools' fault that nobody learns how to spell
anymore; they let the kids get away with misspellings and bad grammar to
encourage their "creativity" and not to stifle their precious "self
esteem"! Bad spelling has nothing to do with no-code.

>What should one do about such a person ?.

1) Is it a local callsign? (eg: Could it be someone from another country, operating with reci. privs?)
2) If it's local, and not in the callsign lookup you did, it's (probably) not valid - giving the 'allowance' for typos, etc from the FCC.
3) What would I do? Time to call out the fox hunters, and have a whale of a time. Rules are simple. The first group to find the fox, wins. ;)

To all radio amateurs

SB DX ARL ARLD034
ARLD034 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, and the OPDX Bulletin. Thanks to all.

HEARD ISLAND, VK0. The Australian Antarctic Division has issued a permit allowing a full-scale amateur radio operation, so plans are in place for this all band, all mode operation, including RTTY and satellite. A multinational team will sail from western Australia November 1, 1995, and expect to arrive at Heard on about the 12th. Departure from Heard will be on December 1. DXpedition organizers are 3Y0PI veterans K0IR, KK6EK and ON6TT. Other team members include HB9AHL, N6EK, PA3DUU, K5VT, DJ9ZB and JH4RHF.

JORDAN, JY. King Hussein, JY1, was on the air Thursday and Friday last week. List operations headed by Mary, WA3HUP, and Amir, 4X6TT, were on 14240 kHz starting at 2130z. QSL JY1 via WA3HUP.

TUNISIA, 3V. OE6EEG plans to operate club station 3V8BB during the first two weeks of August. Some RTTY is possible. QSL via JF2EFA.

UNITED ARAB EMIRATES, A6. Don, WB2DND, will be active signing A61AD between July 24 and 28, and again July 31 through August 2. Don's forte is CW.

CHAGOS ISLANDS, VQ9. Press, N6SS, is planning a 4 month stay on Diego Garcia and operating from club station VQ9SS. A 160 meter antenna is in the works. QSL via N6SS.

TOKELAU ISLANDS, ZK3. Ron, ZL1AMO, is signing ZK3RW with most activity being on 80 through 17 meter CW. Check 3505 kHz around 1016z, 14025 from 2300 to 0230, and 7005 at 0530. Listen on 14195 kHz for SSB. It has been reported that Ron will be there for about three more weeks. QSL via ZL1AMO.

WAKE ISLAND, KH9. AL7EL, WB2DND, KC7V, K4HQI, and possibly others, are planning a DXpedition scheduled for some time this fall. Three stations are planned and some action in the CQWW SSB Contest in October is possible.

COCOS ISLANDS, TI9. Jose, TI2JJP, may return to Cocos for about 15 days starting about October 9 or 10.

ANGOLA, D2. Peter, ON6TT, will be leaving for D2-land this week for a Red Cross mission for the next 2 months. Further details as they become available.

Well, lets see, what kind of parts are you going to make them use?
And old 1625 tetrode with the base knocked off to gain access to the
screen grid? What chassis materials (if any) are required. Transistors
ok as long as they are point contact germanium? How about capacitors.
Waxed paper and glass too modern, should we use Leyden jars instead?
Perhaps IC's would be acceptable if the were connected with Fahenstock
clips. (So they don't "just snap in".)

> I'd like to see this even applied to the Tech examinees, where they
> would be required to provide a homebuilt VHF or UHF rig.

Lecher wires to tune the grid and plate. At least you'd know what freq.
you're on.

> I believe the extra 5 to 10 minutes necessary per examinee would be time
> very well spent.

Only 5-10 minutes to demostrate that the rig works at all, or to spec all
the performances. Such as spurious radiation, phase noise etc? Or just that
it doesn't set the examiners table on fire?

> To those who will balk and say that they aren't going into ham radio
> to build things, I ask them to explain why they're being tested on
> basic electronics (Ohm's law, reactance formulas, resonance formula).

They ask these things because they have some bearing on electronics in
general... The same reason they ask about regulations. You know, band
edges. That sort of stuff.

>
> Jeff NH6IL

Besides, even this wouldn't work. Not 20 minutes after the FCC released
the R&O, Gordon West and W5YI would have License Transmitter Kits on the
market.

Besides which, I thought CW was supposed to act like the lid filter. How
can soldering a few parts together from a Gordon West kit do that?

It's called RG-6 and even Radio Shack carries it. And with the correct type-F connectors too.

> I don't think the cable companies even use it. It's sort of
> expensive.

No, the cable companies *DO* use it. It is cheaper than losing signal to pirate couplers. They just don't always use it inside the house. (Or in condo/apartments built with distribution systems.)

> It could also be her cheap TV and there is nothing that can be done

Many of yesteryear's novices were building their stations while awaiting
the 3 or more months for their ticket to arrive, so the concept of a
newcomer building a rig is not new.

No license is needed to build and tune up the rig (using a dummy load).

No, my first radio didn't work, but trouble shooting is a very valuable
part of the process of learning. Sure teaches you patience!

Actually, this is the whole problem. What most people forget (or never knew) is that E is ONLY APPROXIMATELY EQUAL to MC^2. In fact, if you go back to Al's original work on the subject you find that

E = MC^2 + a bunch of higher order terms.

Even though these higher order terms are very very small (compared to MC^2), it is THESE terms which cause the problems with tranmission through an antenna element and the subsequent and continued degradation in performance throughout the life of the antenna.

It has something to do with the process of Cold Confusion - which so far has never panned out as an energy source, but sure causes havoc with antennas.

;-) ;-) ;-)

Curtis & Hugh,

I am not a bitter ex-Radio Shack employe, just an ex-Radio Shack employee from the '70s. In those days RS made some quality products. However, since they went to Korea, things have changed.

Hugh works for Radio Shack so he tends to be blinded from the truth. Time and time again we hear from ex employees on the Internet that they left the place because they just could not continue to sell those products and still sleep at night. If Hugh wants to continue to push that stuff on unsuspecting consumers, then so be it, that's his choice. However, I would make it easier on yourself, sell the rig for what you can get for it, and buy something with good quality and support from a bonafide ham radio manufacturer and retailer.

Regards,

Duffy - WB8NUT

The Manual for the HTX-202 shows the resistance value for connecting
the radio to a TNC, use the same resistor value, and it should work.
It is considerably lower than the Icom, but can't recall right off what
I used.

: books are virtually sold at cost. Which is it? If the Handbook
: sold for $80 (assuming no drop in number sold, for the moment) then
: maybe we wouldn't have to pay any dues at all! Please clarify: is
: the League subsidizing the publications or vice versa?

Rick,

You are probably confused because you are adding things to what I have said
and then asking me why I said them. My statement that books similar to the
Handbook sell for $80 does not mean that we are selling them at a loss.

Our book "profits" are used to help fund ARRL Membership services. Our
books do not sell for the same price as their commercial equivalents. Some
of our publications cost more to edit and produce than we make from them;
others produce more revenue than they cost. Overall, our book publications
do fund Membership services. I don't know how much profit commercial book
publishers are making because I don't know what it costs them to
write, edit, produce and print their books.

In one of the electronic classes I had, the instructor always assumed
you were familiar with the section we were working and often just put
E= as one of the questions. Most of us would answer it with whatever
formula we were studying at the time, However one Guy would always
answer it

E=MC^2

The instructor always counted it wrong, then one day the missed
question was the difference between and A and A-, the student decided

to argue, The instructors answer, All this time if you would answered with E=Mc^2 .ie lower case C since it is a constant, I would have given you credit for them, however your answer is not correct for any question.

BTW the guys first name was Curtis ;-)

I guess us Cheeseheads have it lucky. $10 when you get the plate, no additionalannual fee.

Of course, in an effort to stick to his "no new taxes" pledge, Republican Gov.
Tommy G. Thompson just raised the regular annual fee from $45 to $55 for
passenger cars.

Richard Karlquist (rkarlqu@scd.hp.com) wrote:
: 1. How much of the publishing profits go to subsidize membership
: services vs. being reinvested in the publishing empire? Ever heard
: of charities that raise money and then use it as seed money to pay
: fundraising costs to raise more money? We need to guard against
: this tendancy.

I think someone had previously answered this question. I think the
answer was something like 30% of the membership costs are covered by
the publishing operation. Anyone got better/more accurate numbers?

: 2. If the publication arm were sold (minus unprofitable publications
: like QEX), a large sum of money might be realized. This could
: be added to the ARRL's endowment fund and might earn more investment
: income than the present publishing profits that subsidize membership
: services. (Certainly would have in this year's stock market!).

Yeah..for how long. The publishing operation yields ton's of benefits.
1) QST is cheaper to produce since you have all of the book editing
staff/technology in house as well.
2) A multitude of topics are covered by league publications at a
price considered reasonable by hams(and almost for free by the
general public!) As you've said yourself, this allows publications/
books that are of interest to a minority to be published and
subsidized by the more popular publications.
3) Other programs of the league can be afforded due to profits from
the publishing arm.

: 3. If most of the ARRL's income is from publishing not membership
: dues, guess who has the most influence in setting league policy,
: the publishing management (and advertisers), or the members? This
: is analogous to the control of newpapers by the advertisers, not
: the readers, since the former pay most of the costs. You do know
: that the is no such thing as a free lunch. Another example is the
: AARP.

BS. The part of the operation that gets the most attention is any
member who chooses to yell at their respective director. End of
story. This is an inverted pyramid with the members on top!
Members elect/control the Board. The Board sets policy, i.e. controls
all operations of the league professional staff. The professional
staff performs tasks for all who task them within their area of
responsibilities. NOT the other way around. How can the publisher
of QST TELL the board his priorities? He can suggest them, just
like any good employee who knows their job, but the management is
still the management, and in this case its' the BOD.

Perhaps the biggest difference between the ARRL and a normal corporation is the level of involvement of the BOD. In the companies that I've worked for, the BOD's typically meet a couple times a year, and their only real interest is maximizing their own profits. The ARRL BOD is essentially in constant session thru email, and constantly (hopefully) hearing from their constituents. The world of amateur radio is a moving target in the 90's. There is new development with major impact to our hobby almost on a weekly basis. The board, via the executive committee are CONSTANTLY having to moves one way or another to adjust the leagues course on just as often a basis. There isn't any rest for the BOD...it's a full time volunteer job.

Peharps, that last statement is the other major difference. The directors, and all other elected/appointed league officials are volunteers! The BOD doesn't have a profit motive at the center of it's motivation. Obviously, they want to keep the league solvant, but they are more interested in figuring out how the league should perform to maximize the benefits of their members.

(Note: these are observations made while serving as a Director's cabinet member, and section manager, i.e.my own interpretation of what I've seen.)

: -Tom R. N1OOQ randolph@est.enet.dec.com

If your objective is simplicity, then go for signals mirrors, smoke signals or drums. In those instances, you do not even need a radio.

The selection of CW would seem to preclude, indeed deny, the opportunity to use more advanced technologies that are available to amateurs. Since necessity is the mother of invention, it would be more suitable to use the available technology and if there are problems with using that technology, then modify it so that its use is easy, or enhances that capability of the station under similar circumstances. The selection of CW would seemingly be selected for one purpose in mind, being the simple solution. Regretably, it would not encourage the individual to seek a better solution. In other words, its a dead end.

In the case of McGraw Hill, especially if you guage it by the quality
of the material, the answer is (1) alot and (2) not much.

Some of the least usefull books (and magazines) are published by them.

I'm planning a trip to England and Scotland this fall. I'll be sending inquiry to ARRL for info about reciprocal licensing or any permits meeded (though please feel free to inform me on that, too) but I'd appreciate some other information. I don't think I'll be taking the HF rig, so I'm looking at 2m. (Is there a 70cm ham band in the UK?) The ARRL repeater directory lists repeaters in many countries, but I don't find England. Source of info? I'm certainly willing to buy a directory if I can do so fairly readily. Of course, recommendations from people with local knowledge are always good. About the only place I know for sure I'm going is Cambridge - I may post some more specific questions when I know more.

I understand that most (all?) repeaters there use 1700 (or is it 1750?) Hz tone burst activation and of course my US-featured radios don't do that. I'm not sure I can whistle reliably enough. I know that most of the feature differences in the USA/European/Asian versions of popular units are implemented in firmware and/or with jumpers/diodes. Anybody know how to make a TH79A or a TM742A (both Kenwood) do the Continental? Anybody homebrewed a solution, or know of something commercially available?

Any special events I should know about in September?

If the applicant doesn't do it by himself, unaided, it isn't much of a test requirement is it? Of course, if we allow supervision, this would be a fine business opportunity for a ham to set up outside the VE session with a stack of one transmitter crystal kits and a soldering station. "Ok, put this one there with the flat side left. Put the little striped ones there and there, make it match the example in front of you. Put the flat thing with two wires on the bottom there. The thing with the screwdriver slot goes there. OK, here's how we solder... OK now you try the last one. Now let me show you how to peak it up -- see we hook it to the meter here and tweak the screwdriver thingie until the needle goes up to here. Congratulations, you've just homebrewed a rig, that will be $100 please. Yes, I guarantee it will pass, or come get another one or your money back."

>AND the first of whicj
>(building a transmitter) isn't illegal at all for anyone, ham or
>non-ham.

But Jeff wanted them to bring it in and show that it *works*. I suppose there are people who have the equipment and the savvy to do it all with a dummy load and not break any laws the first time, but I think they're few and far between.

I just built a cable for my TNC and HTX-202...had to drop to 2.2K ohms
to get reliable keying on the HTX-202, but my 3AT was keying fine at
4.7K. I have heard of needing to change down to 1K, but I can't
substantiate the report.

I believe the more appropriate Python quote would be:

"This isn't an argument. An argument is more than the simple gainsaying of everything the other party says."

"No it isn't."

[Followups to .policy, though I considered alt.fan.monty-python]

Sure, NASA Tech Briefs frequently describes government-held patents, which
they license to private businesses for a fee. But they can't patent NVIS,
which is the technique of radiating signals at high elevation angles to
achieve short-range communication. This has been done since the dawn of
radio.

There was an excellent introduction to the topic in QST a few months ago.
I don't recall the exact issue. (February?) Author was Ed Farmer.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 JUNE AND FORECAST FOR 01 JULY - 03 JULY

1A. SOLAR SUMMARY
Activity: very low.

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 78/17

GOES satellite data for 29 Jun
Daily Proton Fluence >1 MeV: 2.2E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 4.3E+07 (normal)
X-ray background: A3.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Jul 02 Jul 03 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Jul: 82/23

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet up to 09UT and unsettled to
active thereafter.

Estimated Indices : A K Observed A Index 29 Jun
Learmonth 15 2224 3433
Fredericksburg 12 05
Planetary 13 07

Observed Kp for 29 Jun: 2111 2233
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Jul 12 Quiet to unsettled
02 Jul 6 Quiet
03 Jul 6 Quiet

SB DX ARL ARLD035
ARLD035 DX news

The ARRL DX Advisory Committee (DXAC) voted 15 to 1 to suspend further study of the status on Aruba until the Netherlands and Aruba have announced a change in the current move towards independence for Aruba originally slated for 1996.

In the same ballot, the DXAC voted 9 to 7 against recommending the addition of Scarborough Reef to the DXCC countries List.

Those who voted against the recommendation cited membership opinion within their respective divisions. Some went on to state an opinion that the rocks that comprise the reef do not constitute islands, and for that reason no operation from the reef can be considered ''land based.''

Those who voted in favor felt that Scarborough Reef meets the criteria that were in effect at the time the petition was received. Several cited membership opinion in their divisions.

In membership correspondence to the entire DXAC, 157 persons (72) were against adding Scarborough and 61 were in support of new country status.

DXAC Chair Garth Hamilton, VE3HO, stated, ''The Minimum-Size Rule was not applied to this petition. DXAC members made a judgment in accordance with the DX communities they represent.''

6140. Multi Band Wire Antenna Help

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-30 00:00:00 UTC
From: lewis@phoenix.phoenix.net
Message-ID: <lewis-3006952032530001@199.3.234.108>
Source record: 243249
Cross-posted to: rec.radio.amateur.antenna,alt.radio.amateur.club.clarc,rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I want to put up a trapped wire for 80 - 10 meters. Space is a major problem. I own the house but the lot is small and the deed restrictions are large. I have no large trees to run a wire up to and the house is only about 23' tall at the peak.

The question I have is can I put the wire up with a minimum ground clearance of 15' and use it as a modified sloping inverted vee with out too many problems? I want to tie to the chimney and the top ot the garage in one direction and the chimney and a elevated swallow house pole on the other leg. This will give me about 60 degrees of seperation with the 'point' of the vee pointed upward to the east and the other two legs pointing nortwest and southwest.

Will the wire be omnidirectional in this configuration or directional? I am a neopyhte at this and really need a little help. I am studing to take the ham tests and getting my 'shack' in order for the day when the ticket finally comes in.

Thanks for the help in advance.

Lewis Stephens

6141. This Week in Amateur Radio #118 (for air through 7/7/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-30 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <Bczcnut.sanderman@delphi.com>
Source record: 243250

Here is a summary of news items covered on edition #118 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 7-Jul:

-

1. Shuttle Mission STS-71 Carrying SAREX Docks with Mir
2. FCC Reorganization Closes Baltimore Office
3. Third Party Agreements Signed for Special Olympics
4. Magnetic Tape Recording Inventor Becomes a Silent Key
5. AMSAT Announces Board of Directors Nominees
6. House of Representatives Bill Confuses Vanity Call Sign Cost
7. Repeater Operating Tips for this Fourth of July Weekend
8. Weekly Propagation Forecast with George Bowen, N2LQS
9. "The RAIN Dial-up" from Chicago
10. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
11. "Amateur Radio Newsline" - Edition #933 from Los Angeles
12. Upcoming Special Event Stations
13. Your Voice Needed for "This Week in Amateur Radio" ID Breaks

-

Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community. Funding to access "The RAIN Dial-up" was provided by a grant from the Eastern New York Chapter 95 of the Quarter Century Wireless Association.

-

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM or SANDERMAN@DELPHI.COM.

6142. CW

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-30 00:00:00 UTC
From: rfpwr@aol.com
Message-ID: <3t2ena$670@newsbf02.news.aol.com>
Source record: 243251

On the basis that packet/Amtor/Pactor/RTTY require a degree of technical knowledge to properly set up an HF station, but little, if any, "operating" skill in the traditional sense, I might support some form of digital only HF license with no code exam.

For those who argue that CW and SSB are inherently inferior to Amtor, Pactor, packet, or RTTY, I say: theory is one thing, reality is another. What communication is one trying to accomplish? Field Day is an emergency exercise in contest disguise. Well equipped Field Day stations with proficient CW operators can exceed 100 exchanges per hour. How many Field Day entries will make 100 valid packet HF contacts in 24 hours? I have seen SSB rates of 200 per hour during Field Day. Today a contest; tomorrow health and welfare traffic during a disaster.

Yes, I know the Coast Guard dropped CW in favor of modern digital modes. I also know that CW is almost obsolete commercially. In spite of that, CW is capable of fairly high data transfer rates, in the hands of proficient operators. Also, some good ops can:

1. Work 2 stations simultaneously on the same freq.
2. Selectively hear and work 1 station amid several others on the same freq.
3. Copy stations that others with poorer "ears" cannot hear.
4. Work CW at 30 to 60 WPM and carry on a conversation with someone in the shack.
5. Use 2 receivers tuned to different freqs with split phones and copy 2 sigs simultaneously.

The theoretical texts on radio theory do not address the above.

My point in this discussion is not to build up traditional CW and phone ops as "superhams" or to belittle packet/Amtor/Pactor ops as inferior. As stated earlier, I work all modes. There is room for us all in amateur radio. Traditional SSB and CW comms will be with us for a long time. Technology will advance. Someday a computer might win an HF CW contest. Compromises will be made. We will all have to deal with it. For the common good, let's put an end to the petty bickering on this issue.

Chas N8RR

6143. ARLB066 Vanity call sign fee set

QST de W1AW
ARRL Bulletin 66 ARLB066
From ARRL Headquarters
Newington CT June 30, 1995
To all radio amateurs

SB QST ARL ARLB066
ARLB066 Vanity call sign fee set

The Federal Communications Commission has adopted a fee for amateur
vanity call signs of three dollars per year, to be collected for the
entire 10-year term at the time of application for such a call sign.

The beginning date for these fees is September 18, 1995. These fees
are the result of a mandate from Congress that the FCC collect fees
to recover some of its regulatory costs.

The FCC said that the revenue requirement for amateur vanity call
signs is 840,000, dollar(s) and estimates that it will process 28,000
applications for them.

No start date for applications for vanity call signs has yet been
announced, and the necessary FCC Form 610-Vs have not yet been
released. These fees apply only to vanity call sign applications,
not to any other amateur license transaction.

ARLP028 Propagation de KT7H

ZCZC AP96
QST de W1AW
Propagation Forecast Bulletin 28 ARLP028
From Tad Cook, KT7H
Seattle, WA June 30, 1995
To all radio amateurs

SB PROP ARL ARLP028
ARLP028 Propagation de KT7H

Average solar flux was unchanged last week from the week previous, and geomagnetic indices have been quiet, with K indices between zero and two. The most disturbed day last week was June 26, when the A index reached 16 and the K index went briefly to four.

Geomagnetic conditions are expected to enter a very quiet period for the next couple of weeks. This should produce stable conditions, although solar activity is low enough to depress propagation at higher frequencies. Look for a rising solar flux which should peak at 90 around July 13 or 14. The next period when the K index rises above 3 should be around July 16.

With Summer here, expect some sporadic E skip propagation on 10, 12 and 15 meters over distances of 500 to 1000 miles. 20 meters should be the best band overall, peaking after sunrise and again in the late afternoon and early evening.

Sunspot Numbers for June 22 through 28 were 27, 34, 19, 17, 18, 13 and 13, with a mean of 20.1. 10.7 cm flux was 73.1, 71.9, 71.1, 70.8, 70.9, 72.3 and 74.5, with a mean of 72.1.

The path projections for this week are from Pittsburgh, PA, Jefferson City, MO and Maui, HI to Tokelau (ZK3).

From Pittsburgh 80 meters looks good from 0600z to 1030z, and 40 meters from 0500 to 1130. Check 30 meters from 0400 to 1230 and 20 meters from 0230 to 0800 and 1030 to 1330. 17 meters should be open most days from 2130 to 0100, and on some days 15 meters around 0230.

From Jefferson City check 80 meters from 0530z to 1130z, 40 meters from 0500 to 1230 and 30 meters from 0400 to 1330. 20 meters looks promising around 0130 to 0700 and 1200 to 1330. 17

meters should be open most days around 2100 to 0530, and on some days 15 meters may open around 0330 to 0430.

From Maui 80 meters looks quite strong from 0530z to 1630z and 40 meters from 0330 to 1830. On some days 30 meters may be open around the clock, but the best bets are around 0500 to 1430. The weakest period for 30 meters may be around local sunrise on Maui. 20 meters looks good from 1800 to 0900, 17 meters from 2000 to 0700 and 15 meters from 2200 to 0600. 12 meters looks best around 0130 to 0530 and 10 meters from 0300 to 0430.

GC>blindly to nediocre methods, we hamper the implementation of better
GC>ways.

Oh, yes, you bet it is! I call a person not being able (or willing) to copy 13wpm code a possessor of a most mediocre mind, unless this very person suffers from a severe illness that makes copying impossible.

Excellence is the ability to surpass obstacles in a superior way. Is it an obstacle to hook up the TNC to a computer, start the software and stare onto the screen? I don't think so.

Anyone complaining about the code test for HF-access today can get a ham-ticket without code. You can use all your digital stuff, even make intercontinental contacts by means of satellites or VHF-DX. So, what is it that makes all these digital whimps want to conquer the HF-bands without wanting to spend a fair amount of learning CW? It is the whining of a mediocre community wanting to achieve the status "excellence" without working for it. The biological term for this is "parasitical behaviour", I think.

Stay mediocre, stay among yourselves and leave us alone!

Okay, I know what grid squares are (such as DM79), and I have the ARRL Grid Locator map, but sometimes I see people give their location as DM79fd or something similar. I am pretty sure that the last two letters just narrow the location down some, but exactly how is it done? Are there 26 subdivisions along each side of the grid, or is it something easier, like 10 or 20? Are they labeled starting from North and West, or something else? Please tell me all there is to know!

Thanks and 73,
Russ KI7FL

No, take it from me, you *will* have problems.

>Would a rooftop vertical or
>horizontal wire eliminate the problem?

Difficult to know for sure, but probably not. The best remedy is not to
alert the neighbors to the fact you are a ham. For this reason, I have
never used an outside antenna in a condo, townhouse or apartment.

>I can use 100w output without producing RFI,

You are luckier than most. In situations where neighbors are so close,
100 watts is often more than enough power to cause serious RFI.

>but would like to utilize QRO when needed without bothering the neighbors.

The only way you are likely to accomplish this is to "RFI-proof" every item
your neighbors own that dispolays susceptibility to RF. Even if the cost
wasn't a concern, the legal liability is.

If the neighbors already know who you are, you are probably stuck with the
100 watt output.

A lot of questions about how to listen to the Atlantis on Radio...

Went to NASA's homepage. Got this path for you all on WWW.

http://www.nasa.gov/sarex/sarex.html

I found the document STS-71P.TXT that had the following information:

Shuttle Amateur Radio Experiment-II (SAREX)

Students in the U.S. and Russia will have a chance to speak via amateur radio with astronauts aboard the Space Shuttle Discovery during STS-71. Ground-based amateur radio operators ("hams") will be able to contact the Shuttle astronauts through a direct voice ham radio link as time permits.

Space Shuttle Pilot Charlie Precourt (call sign KB5YSQ) and Mission Specialist Ellen Baker (KB5SIX) will talk to students in five schools in the U.S. and Russia using "ham radio."

Students in the following schools will have the opportunity to talk directly with orbiting astronauts for approximately 4 to 8 minutes:

* Forest Avenue School, Hudson, MA (N1QEQ)
* Suffolk Community College, Seldon, NY (N2XOU)
* Benbrook Elementary School, Benbrook, TX (N5SVW)
* Redlands High School, Redlands, CA (KO6FP)
* School Number 3 Yessentuki, Yessentuki, Russia (YA6HZ)

The radio contacts are part of the SAREX (Shuttle Amateur Radio EXperiment) project, a joint effort by NASA, the American Radio Relay League (ARRL), and the Radio Amateur Satellite Corporation (AMSAT).

The project, which has flown on 17 previous Shuttle missions, is designed to encourage public participation in the space program and support educational initiatives through a program to demonstrate the effectiveness of communications between the Shuttle and low-cost ground stations using amateur radio voice and digital techniques.

STS-71 SAREX Frequencies

Important Note: Since the flight will be the first Shuttle-Mir docking mission, and SAREX and Mir amateur radio stations usually share the same downlink frequency (145.55), the SAREX Working Group has decided to make the following SAREX frequency changes for the STS-71 mission:

For STS-71, SAREX transmissions from the Space Shuttle may be monitored on a worldwide downlink frequency of 145.84MHz.

The voice uplink frequencies are:
144.45 MHz
144.47

The crew will use separate receive and transmit frequencies. Please do not transmit on the Shuttle's downlink frequency. The downlink is your receiving frequency. The uplink is your transmitting frequency.

Note: The astronauts will not favor any one of the above frequencies. Therefore, the ability to talk to an astronaut depends on selecting one of the above frequencies chosen by the astronaut.

Additional Information for Amateur Radio Operators

Several audio and digital communication services have been developed to disseminate Shuttle and SAREX-specific information during the flight.

The ARRL ham radio station (W1AW) will include SAREX information in its regular voice and teletype bulletins.

The amateur radio station at the Goddard Space Flight Center, (WA3NAN), will operate around the clock during the mission, providing

SAREX information, retransmitting live Shuttle air-to-ground audio, and retransmitting many SAREX school group contacts.

Information about orbital elements, contact times, frequencies and crew operating schedules will be available during the mission from NASA ARRL (Steve Mansfield, 203/666-1541) and AMSAT (Frank Bauer, 301/286-8496). AMSAT will provide information bulletins for interested parties on Internet and amateur packet radio.

Current Keplerian elements to track the Shuttle are available from the NASA Spacelink computer information system (BBS), (205) 895-0028 or via Internet spacelink.msfc.nasa.gov., and the ARRL BBS (203) 666-0578.

The latest element sets and mission information are also available via the Johnson Space Center (JSC) ARC BBS or the Goddard Space Flight Center (GSFC) BBS. The JSC number is (713)244-5625, 9600 Baud or less. The GSFC BBS is available via Internet. The address is wa3nan.gsfc.nasa.gov.

The Goddard Space Flight Center amateur radio club planned HF operating frequencies:
3.860 MHz 7.185 MHz
14.295 21.395
28.650

Try HAMCOM30. A schematic is in the program's docs on how to build the interface. It is relatively simple (I am in process of building one---in fact the PCB is at this moment being etched in my bathroom!!) to build the interface. It is available, I believe, by FTP at oakland.edu (not quite sure of the name).

gregory brown (gbrown@unlinfo.unl.edu) wrote:
: Shawn C. Masters (smasters@bzy.gmu.edu) wrote:
: : gregory brown (gbrown@unlinfo.unl.edu) wrote:
: : Yes, but in many cases these modes are economically desirable. This
: : will change with time, as new equipment becomes cheaper.

: I think that was my point. The current, nearly universal access to CW
: (manual Morse) technology is one of its great "superiorities". The
: time WILL come when newer technologies/modes are cheap, available and
: in widespread use, but that time is not _now_.

I think it is now. Look around you at the PCs that are regularly
discarded for junk. I've seen Z80 based machines on the curb for years,
and 286 PCs are just now starting to hit the trash heaps. Couple this
with the simplicity of a basic digital setup, and you have a low cost
entry into digital communication.

: : your aim is communicating, why not use the land lines already in place.
: : I can make up a 900 number that would act like HF CW or SSB voice. You
: : could go up or down in freq by using the keypad. We could even simulate it
: : with some changes in IRC.

: Well, let's not get silly. We are all familiar with the basic
: purposes of the Amateur Radio Service--no need to repeat them. But
: the ability to communicate (emergency communications, international
: goodwill, etc.) is as fundamental in these purposes as advancing the
: (technical) art.

I was just showing that rag chewing can be as effective on the
internet. So many people say, who you going to talk to, or how are you
going to communicate. Well this forum seems to have brought more people
and diverse view together then most amatuer communications I've seen. So
if it's quirks of CW and HF you are looking for, I thought I'd let them
know they can be accomodated:-).

: Few of us are in a position to actively fulfill every one of the
: stated purposes of Amateur Radio. Can I design digital circuits and
: contribute to cutting-edge state-of-the-art advances in technology?
: Not on your life. But even though I don't have your technical
: abilities and interests, I do hold an Extra Class license and I DO
: actually UNDERSTAND the theory I was tested on. A basic understanding,
: at least, of electronic theory is important. That's why we're tested
: on it.

While you may not design circuits, you have expanded your
technical knowledge, which is the real root of a lot of the goals in

amateur radio.

: The ITU (and signers of the treaty re: Amateur Radio) view Morse
: ability as an important (essential) skill in the area of international
: communications (HF). That's why it is required. You may choose not
: to USE it (as I have "chosen" not to design digital circuits), but you
: must still demonstrate a basic understanding of it on the exam.

: Why speed tests??? It's all part of the incentive licensing
: structure philosophy. If you demonstrate increased skills and
: knowledge, you receive increased privileges. 5WPM=Ohms Law.
: 13WPM=rectifier basics 20WPM=practical op amp circuits. Well, you
: get the idea.

I think most people are arguing why CW speed tests? I personally
would like to see more incentive for those of us not interested in code.

73,
Shawn

It's interesting in that here we have someone ridiculing us because we choose to use our given senses for communication rather than using a machine. Some of the anti-code folks are so proud of their machines and speak so highly of them to the point were they've lost sight of the fact that they can function just fine without them.

Could it be that they're hiding behind their machines because they've lost all confidence in their ability to functin without them? One wonders...

>If your objective is simplicity, then go for signals mirrors, smoke
>signals or drums. In those instances, you do not even need a radio.

Simplicity + DX does not equate to signal mirrors, Jim. Try working
20M with drums. One wonders why you'd ridicule a mode in which one is
able to construct a transmitter for, and, along with one's mental powers,
work the same station that you want to work with your machine.

>The selection of CW would seem to preclude, indeed deny, the
>opportunity to use more advanced technologies that are available to
>amateurs.

Why use RF when you can use AT&T? You're not using the most advanced
technology if you're not using the telephone, Jim. You're a
techno-anchor advocating fickle atmospheric propagation rather
than fiber optic cables and satellites. You ought to be ashamed
of yourself.

>The selection of CW would seemingly be selected for one purpose in mind,
>being the simple solution.

So complexity is good. I see. Tell me what to do with my scanner
and its blown custom-made no-longer-available IC.

>73 and live better digitally
>Jim, VE3XJ

Does anyone have any experience with the MFJ 812B VHF SWR/Wattmeter which
does 2m and 220? It has a nice low price....does it work well?
Thanks in advance for any replies. Ken..KB1AWV...IQC109@URIACC.URI.EDU

I gather from one of the other posts the callsign he is using is valid, possibly not his own, but stolen.

Three things to do, 1 -- invite the guy to club meetings, breakfast whatever on the air, if he comes, chances are he is just a lid, and will need your help anyway. 2 -- Find the appropriate name in the callbook, and call him by that name on the air while a group is on, see if he answers. 3 -- QSL the address in the Callbook, if he is legit, he will be flattered, if not, the guy getting the card will let you know right away someone is using his call.

>ham rigs so i can go SSB along with CW, all i want is basically (if you
>know of them)

CB sets can generally be fairly easily converted to 10 meters, and with some effort to 6 meters. Other bands will require such extensive alterations that it's probably best to start from scratch. To do the conversion, you need to know how to read and understand schematics, recognize parts, and understand RF layout practices. These skills are essential to any building project.

>1) magizines or books that have Step by step instuctions and of course
>parts lists

The amateur magazines aren't quite this detailed in their construction articles. They generally assume you know how to assemble circuitry without having to have step by step instructions. The two magazines with projects you might want to attempt are QST and 73 Magazine. Kits would fall into the step by step category. The late lamented Heathkits were of this kind. Most of the kit companies today, however, assume you know enough not to need that level of detail, though the Ramsey 2 meter kit approaches the step by step level. (It's not a bargain, though, since you can buy a better used 2 meter radio than what you'd get if you get that kit to work for less money.)

>2) Mail order companys that sell parts..

There is a large list in the ARRL Handbook, and some of the companies advertise in the amateur magazines.

>3) anything elce you can give me in advice or online pointers to makeing
>my own equipment

Post questions in homebrew, but do some of your own homework first.
Reading and understanding the theory and construction practices chapters
in the Handbook should bring you closer to speed. Wes Hayward's _Introduction
to Radio Frequency Design_ should give you more depth, and the old _Solid
State Design for the Radio Amateur_ gives you some practical rule of thumb
design information. You're really going to have to do some studying before
you will be competent to build your own gear.

>4) please, please dont say check the rec.radio.amature.homebrew group...
>i did that and guess what? No responce, this was about a week ago and i
>wanted to be on the air oh lets say march 15th 1995 (look me up in the
>FCC callbook, 5/15/95 was the day my Call was issued :))

Well, if you could spell *amateur* correctly, that might help. :-)
Really, you're less likely to get a response in homebrew if you
don't define the problem clearly. The homebrew group isn't likely
to want to take the time to explain to you which end of the soldering
iron is hot, though even that question might be answered if you
phrase it properly. They will help with real technical problems,
but you should do some of the homework first. I'm not surprised you
got no response to a "how do I build a radio covering 160m to 23 cm"
type of question. It shows you aren't ready to really build something.

>p.s. why the heck dose the ARRL want $30 for there handbook? hmm? So much
>for getting that book eh'? Maybe i could call some used bookstores and
>some ham stores? Advice on books, Radios, Life, the World whatever is
>also wanted! I need all the help i can get! Thanks, Tom...

$30 is an incredible bargain for a technical book, especially one
with the breadth and depth of the Handbook. Typical professional
handbooks run $80 or more. Get a 1995 Handbook. It has been greatly
improved and updated from previous editions. Most of your elementary
questions will be answered by the Handbook. If you get stuck on
something *specific*, a request to the homebrew group will get you
a prompt response.

Source record: 243410

Newsgroups: rec.radio.amateur.misc
From: brian.carling@acenet.com

Jimm Cummings writes:

JC>: Jim CUmmings wrote to Bob Levine:

JC>: JC>: Also, no one can argue the fact that a cw is the most efficient
JC>: JC>: use of bandwidth for a QSO.

JC>: JC>That is no longer the case and is untrue. But if you are not using the
JC>: JC>newer technolgies or trying to keep current in them, it is not surprisi
JC>: JC>that many believe this surviving radio myth (rm).

JC>: Sigh! We have been over this over and over again! Sure you may have
JC>: some oddball mode that is so esoteric that no one has heard of it yet,
JC>: but you will still need a lot more complex gear to run that mode.

JC>Ignorance of technology, like the law, is no excuse.

The why do YOU want people to be ignorant of CW (a form of technology)?

Two rather well know
JC>examples of digital technology that is superior to CW is Pactor and Clover
JC>and others are coming.

They are not "superior" unless you want to compare apples with oranges!

In addition, the complexity of the gear required
JC>is, in reality, not much more than a simple CW rig, modified to shift its
JC>carrier as in the Pactor mode.

Again, you have not justified your anti-CW argument at all by this
comparison.

Carling is entitled to mock these
JC>assertions made by others and myself, as he has demonstrably done so
JC>before, but it none the less does not make it any less true that CW is no
JC>longer on its "it will get through when all other modes won't" pedestal or
JC>more so demonstrate to the world his ignorance.

Well, "Cummings", you certainly know how to be rude to others that
disagree with you don't you!

Your "superior modes" argument is just so much laughable hogwash as
any competent radio amateur knows.

JC>Then Carling should undertake to prove the assertions, finding and
JC>experiments of others are wrong. Otherwise, he is blowing smoke.

No specifics here Jim, what the heck are you talking about?
I don't think you know any more. You are just emotionally upset because
you are frustrated. You need a hobby, like maybe real amateur radio,
using CW ad working DXCC and contests! You are the one missing out.
I can do better and faster than silly Pactor and CLover on my computer
and modem if I want to type and read a screen!

JC>: JC>Where is your proof that the assertion is true? Otherwise, it is usele
JC>: JC>speculation bordering on libel.

JC>: It's only "libel" if you mention an individual or company by name Jim!

JC>: Also, it is only libel if it isn't true! If it's true, it isn't libel!
JC>: He might be right that ham radio manufacturers try to steer the FCC
JC>: rule making process through various means. It seems very likely to me.
JC>: Why is that libelous? Bob didn't accuse them of anything illegal or
JC>: immoral did he?

JC>The original assertion about manufacturers were focused on the Canadian
JC>context. What happens in the FCC with respect to the influence of ham
JC>radio equipment manufacturers, I couldn't give a jot. Besides, Canadian
JC>libel law is different than Canadian libel law, so what applies here is
JC>irrelevant to the US.

WHAT?????? We aren't talking about Canada, and anyway the word libel
means the same in either country. It is a REALLY silly discussion that
has almost nothing to do with the topic at hand.

JC>If you will be kind enough to re-read my quote, I did not say it was
JC>libel, but it bordered on being so.

OK, but read MY quote. I didn't SAY that you SAID it was libel!

JC>It is not libel, per se,

As I said, thank you! So why vring it up? People don't get taken for
court for ALMOST doing something illegal!

JC>However, there was no influence by equipment
JC>manufacturers whatsoever upon the restructuring of the certification
of
JC>the amateur service in Canada.

I think we were discussing the U.S., but no matter. To make such a broad
statement is absurd. You have no idea what influence was exerted, unless
of course you have thousands of spies everywhere listening to every
conversation!

JC>In effect, Duff was engaging in that time
JC>honoured pastime of blowing hot air. The problem was, he didn't
realize
JC>that I would call him on his accusation. Notice how clumsily he
JC>avoided proving his statement.

And I notice that you avoid proving any of yours too!

JC>73 and live better digitally

I do, every day on CW!

Look on QRZ web server at http://www.qrz.com

Under the FTP option go into the files section, then the morse. There are several files here. The ones I'm familiar with that I think do what you want is PROCW and CW104. It has been a year or two since I played with them, but I think they will do what you want.

or if you have a CD go ahead and spring $25 for the CD and get lots of shareware stuff.

I am in no way associated with QRZ, just a satisfied customer.

|>
|> 1. Whatever I am, I am honest.

This assertion can be easily proven false. Anyone making inclusive statements about a large group of individuals, and claiming unflattering characteristics about all within that group is anything but honest.

|> 2. I do not INTEND to upset people.

Did you write this with a straight face ??

|> 3. I am NOT a celebrity.

On this we agree....

|> 4. The ZL posting was genuine.

What's the "ZL posting" ??

|> 5. The real losers are hams who live for the radio.

No, the real losers are the individuals who live to make trouble. You cannot come to a public forum, frequented by a certain group of individuals, claim that this group have sub-human attributes and then expect to be considered anything less than a trouble-maker. More accurately, I agree with the group opinion that you are more of an a***@|*.

|> 5. Burt does not go away if ignored (why don't you practice what you preach?).
|>
|>

Didn't you mean (6) ?? Really a teacher that cannot even count. I agree that you will not go away with simple ignoring. You will however, will refuse to respond to those who turn your (cough cough) "wit" (cough cough) back towards you. So my advice to all those listening, give Burt his trouble maker attitude back, plus.

Oh, yes Burt. I expect you to ignore this as well !!

Special class of AM modulation without carrier or opposite
sideband products
> HT Handheld Transciever
The hand Held Bricks to communications
> LSB Lower Sideband
SSB using below carrier products
> USB Upper Sideband
SSB using above carrier products
> HAM Amateur
One of us
> SIMPLEX/FULL DUPLEX
Usually in regard to FM communications, Simplex is single
grequency operation. Full Duplex is going through a repeater

so that everyone talks on 1 frequency, and listens on a 2nd.
> RTTY Radio TeleTYpe
Using a Teletype(tm) machine over the radio. Usually with a
FSK (frequency Shift Keyed) method rather than on-off keying
> PACKET
Newer communications method. Related to RTTY, but with data
sent in packets and the contents of each verified.
> SWR Standing Wave Ratio
Measurement of match between transmitter and antenna load
> QSL Confirm Receipt
"Q" signal. QSL? can you confirm QSL Yes I confirm
> QST General Call to All
"Q" signal
> QSO Contact
"Q" signal
> CTCSS Carrier Tone Controlled Squelch System
The official name for PL (Motorola's trademarked, Private Line)
Using sub-audible tones to tell a receiver to turn speaker on.
> DXing or "DX" Abbreviation for distance
DXing = Working a distant station
> DTMF Dual Tone Multiple Frequency
Originally developed by Bell Systems and AT&T for telephone
dialing via tones rather than pulses. Suitable for control
of equipment remotely via radio.
> MARS/CAP Military Affiliate Radio / Civilian Air Patrol
Two support groups that use amateurs for members and
frequencies adjacent to amateur band frequencies.
> CQ General Call to Any
Usually used in the HF bands to establish random contacts
> RIT Receiver Incrimental Tuning
A feature in transceivers where the receive frequency usually
track the transmit frequency.
> IF NOTCH FILTER
Special filter to create a notch in the passband to eliminate
an offending station/signal.
> IF SLOPE TUNER
Special method of customizing passband tuning effect.
> FULL BREAK IN/SEMI BREAK IN
When used with CW (morse code) Full break-in means that with
each contact of the hand key the transmitter comes on, but
while the key is open the receiver is fully functional. Semi-
breaking means that there is a slight delay time between when
the key opens and the receiver comes back on. Referrence to
older transmitters where the station was manually switched
over for transmit to receiver modes.
> WORLD BAND
Usually world broadcast range typically 6-11 MHz
> AMATEUR BAND
Band of frequencies specified for amateur radio operation.
Many of them in segments covering 1.8 MHz to GHZ range.

> HAM BAND
Same a amateur band.
> SHORTWAVE BAND
Usually same as HF (see above)

Subject: Transmitting Uses Up

>>Transmitting Uses Up Antennas!

Unless it's a Mosley!

GHY> E = MC^2 + a bunch of higher order terms.
GHY> Even though these higher order terms are very very small (compared to
GHY> MC^2), it is THESE terms which cause the problems with tranmission
GHY> through an antenna element and the subsequent and continued
GHY> degradation in performance throughout the life of the antenna.

>K = (gamma)mc^2 - mc^2; gamma being the reciptocal of the square
>root of 1 minus the ratio of the object's
>velocity vs the speed of light.

>Since this applies to objects with *mass* in motion and we know EM
>waves propagate at c, then they must have no mass and this doesn't apply
>to the "burning" up of antennae. Then again......

>Phil, KE4KRT

True, unless of course the transmitter and antenna are in motion. In this
case, the closer
the velocity of the transmitter approaches the speed of light (c) then the
faster the antenna
would be used up. Therefore, mobile antennae will not last as long as fixed
antennae and
certainly the antennae on the Shuttle, MIR Space Station, and the multitude
of orbiting
satellites will not last as long as their earth-bound counterparts. If any
moving antenna
actually reached the speed of light it would ceaseto function immediately.
I have had this
experience at least twice. ;-)

6184. HTX-202 Low Deviation

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-30 00:00:00 UTC
From: chriss@mdd.comm.mot.com
Message-ID: <chriss-3006950839190001@dynamac04.mdd.comm.mot.com>
Source record: 243418

I recently bought a Realistic HTX-202 transceiver. After a few complaints that my transmitter deviation was low I measured it on an analyser and found the deviation was around 2 kHz. Consequently, I took it back to the Radio Shack store where I tried two other units and they all seemed to have the same low deviation.

Has anyone else experienced this same problem or do we simply have a bad batch? Does anyone know how to adjust the deviation? I have a schematic which is difficult to follow, since none of the components are identified on the circuit boards. I would speculate that the variable resistor just under the back cover is a deviation control since the schematic only shows a single variable resistor in the microphone audio path on the board.

6185. Re: TNX FER FB CW DURING FD

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-30 00:00:00 UTC
From: JHEEDLES <JHEEDLES@mailgw.sanders.lockheed.com>
Message-ID: <3t18h9$jnq@news.sanders.lockheed.com>
Source record: 243419

Hi Paul,

> During my air shifts I was impressed not only by the huge
>number of CW stations on the air (guess the "2 points per CW QSO"
>incentive really works) but by the quality of the vast majority of
>the "fists" running at the 20-25 WPM level.

Our heavy hitter CW operators slow down to that speed since
they tend to get fewer responses if they run their normal speed.

> Exchanges were crisp
>and clean, making operating a real pleasure. N1NH was one station
>which stood out, probably because we worked it on several bands and
>because their category was *24A* (how in the world did you avoid
>in-band interference with that many transmitters?).

1) Three 70 foot towers in a line perpendicular to our primary azimuth.
We basically aim the beams WSW and leave them there. From tower 1
to tower 2 is about 350 feet, and from tower 2 to tower 3 is about
400 feet. The 40 foot novice tower is 50 feet in front and 100 feet
to the right of tower two, This is looking from behind with tower 1
on the eastern, or left side.
2) Antennas with decent front-to-back and sidelobe levels. Primarily
well maintained, well adjusted cushcraft beams. 4 element 20 on CW,
two stacked 3 element 20's on phone. 2 element 40's for both CW and
phone, 4 element 15's on CW and phone, etc.
3) Judicious placement. 20 & 40 CW on tower 1, 20 & 40 SSB on tower 3.
4) Thirteen of the 100 Watt multiband RF Interference filters described
in the June 94 QST.
5) Good transceivers. 20 & 40 CW were IC-781's. There were 3 or 4
IC-765's, an FT-1000, and similar rigs. Narrowband and DSP filters
were also used.
6) We don't.

FYI, we ran a phone and CW station on every band from 160M to 400Mhz,
and a single station on 902MHz (ATV), 1.2GHz, 10GHz, and 300+GHZ(Laser).
We also had a novice, satellite, packet, and natural power stations.
==========

Nashua Area Radio Club (NARC)
Preliminary results from Field day are in!

Total QSO's 6288, Excluding dupes 6201. Score 21,170.

This does not include the 10-12 natural power contacts and the
2M CW contacts. Also not included is the 10 point bonus for each and
every operator who made at least one contact and was a member of the

ARRL. This should give up another couple of hundred points, depending on how many folks belong to the league. If you made at least one contact using N1NH or N1JWA and you are a member of the ARRL Make sure you let Al, WA1TYB, al@simons.mv.com, or myself know within a week or so.

Last year the top three were:
Call Class Q's Score
K6CAB 15A-Battery 3640 30,150
WY8M 16A 5917 21,468
N1NH 14A 5930 18,710

We ran 100 watts on everything from 160M to 2M. 50 watts on 440 MHz.
220MHz, and 902MHz up to light were lower power,

>Jim, VE3XJ

Pardon my density, but what's so wrong about a simple solution that works? Yes there are more advanced technologies available - so what? I don't have a fancy DSP-equipped base station. I don't feel like inventing a digital data terminal that fits in a backpack. I'm not interested in debugging available digital technology to fit this application.

All I need to do is send a brief message, "meet me at X in Y days", nothing more. I have, now, the equipment to do this - a 40m QRP CW rig. It works, it's already invented, it's debugged. Your suggestion to use drums or mirrors is, frankly, plain silly. My contact might be 200 miles away.

Sorry, folks, but sometimes CW is a good choice. Maybe not the theoretically perfect or best choice, but a good one. Why is this so difficult to accept? Why MUST my backpacking trip advance the state of the art of radio? It's a vacation, not a master's thesis!

BTW, I can think of plenty of other places where CW works just fine. For instance, some of my ham friends are into 10 GHz - what's the first transmission they ever made when trying to get going on that band? Their call sign in CW! You guys would no doubt have them hooked up to a DSP system, running some exotic modulation at Gbits per second just to send their call!

In batches. About 2 years ago quite a qroup of 202's showed up with low
audio. Then they got better for a while then down then up.
My experience is from hearing them on air and talking to the owners
as they have been bought from the three stores here.
I think they ought to be sent back and keep replacing them until
they get the msg that we won't stand for it.

>of this is that we have a 2 meter band that is a model for all bands: it is
>full of excellent, well-run repeaters, that have ENTICED THOUSANDS OF
>AMATEURS INTO JOINING OUR **DYING** HOBBY.

Roger, whom would you expect would be most interested in repeater coordinating
but repeater trustees. As far as the problems coordinating repeaters, they are
growing pains from a fast growing hobby not our "DYING HOBBY". The hobby is
evolving not dying. Its up to us the particapants to guide the evolution not
stop it or force it.

Going to the top of your complaint list, SCRBBA has to communicate better and
you can help them learn. Your problem in any action you take is one of

credibility. You have none. SCRBBA on the other hand, by their being and history of being has that credibility. FCC Part 97.205c gives it them. What you have to do is gain credibility with the FCC EIC in your district. You do that by communicating with him and SCRBBA about coordinating a 440 repeater, that is if your serious. Your friends are facts and communication.

First, identify one of the paper repeaters you so often refer to. Then, with a little help from your friends, monitor that frequency, being very careful to keep an accurate log of monitoring times etc. I would think several weeks of monitoring should be enough. Then, send SCRBBA communication of your intent to coordinate a repeater on the unused frequency. If after several attempts on your part they do not respond, now contact the FCC EIC in your district and explain your position, what evidence you have of the open frequency, and your inability to communicate with the area frequency coordinator. If you are patient and have documented all your efforts you may find yourself with a frequency.

In past dealings with several FCC EIC, I have found them to reasonable human beings. If you present them with good factual information the outcome in my case was reasonable. Don't expect things to happen overnight. The Reagan administration did away with many of their field people. Also, they don't have time to play repeater Mom so your not going to be on the top of the list.

Good Luck

6193. Mobile Radio Electrical for Chevy C/K Pickups

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-30 00:00:00 UTC
From: rycj10@email.sps.mot.com
Message-ID: <3t19mh$8v9@newsgate.sps.mot.com>
Source record: 243427

Does anyone have information or recommendations for electrical hookup for mobile radios for late model Chevy C/K pickups? There's nothing obvious under the dash except the cigarette lighter which I used for my 2M rig. I'd like to install some HF gear as well. The firewall is sealed up and I hate to start drilling holes if it's not necessary. I've called Chevrolet about literature on installing mobile radios with no success.

Any help would be appreciated.

>
> Gary
>

Gary thanks for the usual coherent reply.

As the original author, I agree it was a bit strong but the response has been most enlightening. The strongly religious Herman and Wyatt both answered as if they had neither read nor understood my post.

Thinking that perhaps I had not made my points clearly enough I wrote private e-mail to both. I tried to explain that I didn't want a free HF ticket (I actually have HF CW privileges) but was challenging the utility of CW in a changing world.

From Wyatt nothing, not responsive but at least not insulting. From Herman a very full of him self (or full of something) e-mail requesting that I not darken the door of his e-mail but to only respond in news groups. Ok Jeff here it is:

My original post for those who can actually read and understand was a technical challenge to CW as a "can get through when other modes cannot mode" or CW as a lid filter. In fact the ravings by you and Mr. Wyatt do not address any of the issued raised. If the non-responsive replies from you (twice) and Wyatt are an indication of the comprehension of CW ops it proves my point that they copy little and assume much. A quick visit to the May call cdrom shows Herman a general. Why not advanced or extra? Perhaps too technical? Inquiring minds want to know.

Upon reflection CW is not completely useless it has a place but it should not dominate as it does. Until the response from Wyatt accusing me of wanting his spectrum it had not occurred to me how much space

is given to CW perhaps this is the time to reconsider the band plan.
Since CW is less than 25% of the operating that is done and requires
less bandwidth the CW portions of the bands should be reduced appropriately.
The space saved could be dedicated to alternate digital modes and
development of new techniques.

Bob is correct. The Condor Connection links San Diego and LA north to San Francisco and east into Nevada. It is entirely on the 222 MHz. band. In addition to the Condor Connection and the Zia Connection, you'll find the Evergreen Intertie in the Pacific Northwest, the Piedmont Coastal Radio Network in North Carolina and Virginia and the Northeast Connection in - where else? - the Northeast.

In his message of 6/29, tatkins@unix1.sncc.lsu.edu (Atkins) wrote:

>>Could someone tell me in as much detail as space and time allow, what exactly each of these mean, please:<<

I don't think answering is a waste of bandwidth, but to conserve bandwidth, I will keep the replies brief and point you toward sources of more information.

ARRL - The American Radio Relay League, the major national ham radio association.
CW - continuous wave. Used as an abbreviation for Morse Code.
AM - Amplitude Modulation. One method of modulating a voice signal.
FM - Frequency Modulation. Another (different) method.
NFM/WFM - Narrow and Wide FM, respectively (narrow uses less frequency space)
VFO - Variable Frequency Oscillator - used to tune your radio
UHF - Ultra High Frequency, generally those between 300 and 1,000 MHz
VHF - Very High Frequency, generally those between 30 and 300 MHz
HF - High Frequency, generally those between 3 and 30 MHz (also known as short-wave)
MW - Medium Wave, also medium frequencies, between 500 kHz and 3 MHz (you'll find the AM broadcast band here).
LW - Long Wave - frequencies below 500 kHz
SSB - Single Sideband, a variation on AM and the most common type of modulation in use today by hams (and many others) on HF.
HT - Abbreviation for "Handi-Talkie," a Motorola trademark; generally used to refer to any handheld amateur radio.
LSB - Lower Sideband (see SSB above - each AM signal has two sidebands, upper and lower; on the ham bands, LSB is the standard on the 1.8, 3.5 and 7 MHz band -- and for digital transmissions on all HF ham bands; USB is the standard for voice communications on the 14, 17, 21, 24 and 28 MHz bands and on VHF/UHF "weak signal" contacts)
USB - Upper sideband
HAM - Not an abbreviation for anything and should not be used in upper case. Ham is the general informal reference for amateur radio operators. Its source is obscure.
SIMPLEX/FULL DUPLEX - Simplex - Transmitting and receiving on the same frequency; Full Duplex - transmitting and receiving on different frequencies, with the ability to talk and listen at the same time (like on the phone).
RTTY - Radio Teletype
PACKET - a form of RTTY, using computer-generated digital signals to communicate over the radio. Data is sent out in "packets," thus the name.

SWR - Standing Wave Ratio - a measure of antenna and feedline performance
QSL - Confirmation of information received; QSL cards are exchanged by hams to confirm on-air contacts and qualify for various operating awards.
QST - "Calling all Amateurs." Also the title of the ARRL's monthly magazine.
QSO - shorthand for an on-air contact
CTCSS - Continuous Tone Coded Squelch System (often referred to by its Motorola trade-name, "PL" or "Private Line") - a subaudible tone system used to reduce repeater-to-repeater interference or to restrict access to specific repeaters
DXing or "DX" - DX means distance. A DX station is generally one in another country. And DXing is the "sport" of contacting DX stations.
DTMF - I forget what it stands for, but it's the tone system used in push-button phones and in many VHF/UHF amateur rigs for making phone calls and controlling various repeater functions
MARS/CAP - MARS is the Military Affiliate Radio System, a network of hams who relay messages and make "phone patches" for members of the US Armed Forces around the world. CAP is the Civil Air Patrol. Many hams are CAP members. Both MARS and CAP are assigned frequencies outside of, but adjacent to, many ham radio bands. Thus, many rigs may be modified to operate on those frequencies if you are a member of one of those groups and are authorized to do so.
CQ - "Calling Anybody" - also the name of a popular ham radio magazine
RIT - Receive Incremental Tuning - lets you better tune in a SSB signal without changing your transmit frequency
IF NOTCH FILTER - IF is Intermediate Frequency. An IF notch filter helps you tune in a signal you want while tuning out adjacent signals
IF SLOPE TUNER - similar in function to an IF notch filter
FULL BREAK IN/SEMI BREAK IN - the ability to interrupt someone else's Morse code transmission and be heard by the other station.
WORLD BAND - another term for shortwave
AMATEUR BAND - the various groups of frequencies (bands) assigned for use by amateur radio operators
HAM BAND - see above
SHORTWAVE BAND - the various groupd of frequencies assigned for use by shortwave broadcast stations (international broadcasters), or more generally, the HF frequencies between 3 and 30 MHz

For more information, I'd recommend a copy of CQ's introductory video, "Ham Radio Horizons," the CQ "Beginner's Guide to Amateur Radio," "Popular Communications" magazine, "Passport to World Band Radio" and a ham radio licensing manual, such as the ARRL's "Now You're Talking." (All are available from CQ).

I will also e-mail you CQ magazine's FREE online introduction to ham radio.

Best,
Rich Moseson, NW2L

6199. HT's on Airplanes?

Newsgroup: rec.radio.amateur.misc

Hello,

I will be taking a trip to Cincinnati in a couple of weeks and I want to take my ft-530 HT with me. Will the airplanes (United) not allow me to bring it on the plane? I know they don't want me to use it on the plane, but I want to have it with me a soon as I land and I don't want it to get banged up in my luggage. If anybody has any experience with this PLEASE let me know as soon as you can. It would be best if you could e-mail me directly, as I rarely get a chance to check this group.

Thank you,

John Thompson

>though its called a fee.

Same thing here in AZ. Registration for my 93 Aerostar runs about $400 but it goes down every year. Most of it is deductable in the 1040. The $25 annual fee for call plates really sucks, tho. I gues the governor has to find some way to fund his advisors who make over $100K/yr and the remodeling of his office for almost $2M. Glad I didn't vote for the SOB. Not that it makes any difference...

Now back to the real ham stuff, like the code wars and whether the ARRL is non-profit.

See you at Ft. Tuthill...
